Subject: RE: Former WPS Green Bay MGP Upland - Response to WDNR Tech Memo Comments

Frank,

Thank you for your response to the WDNR comments.

Excavation around soil boring location SB-419 as part of the voluntary interim action is acceptable to address elevated naphthalene concentrations detected in soil. If subsequent confirmation sampling confirms the residual soil is below the NAPL screening criteria detailed in RR-800, no additional vapor sampling is necessary at this time in the vicinity of SB-419.

Thank you,
Sarah
