Subject: DNR Comments on WPSC Green bay MGP East River Sheen Tech Memo

Leah,

I agree with Jacobs' assessment on yesterday's call, that the source of the sheen and impacted sediment is unlikely to be dredge residuals.

The only comments I have regarding the Tech Memo are as follow.

1. Section 5.2: Please confirm with the city and/or utilities when utility work was last completed on Utility Court, Utility Street and N Madison Street, and confirm if any methods were employed to limit contaminant migration such as clay plugs.
2. Figure 2: Please clarify poling vs probe locations. Each probe location is identified as a poling location in the call out boxes on Figure 2.

Thank you for the opportunity to provide comment on the Tech Memo dated February 18, 2022, discussing the sheen/release to the East River.
Please reach out with any questions.

Thank you,
Sarah

We are committed to service excellence.
