SUBJECT: WPSC Green Bay MGP, DNR Comments on the Pre-Design Investigation Work Plan  
Addendum No. 2, Revision 0, dated March 15, 2022

Thank you for the opportunity to provide comment on the Green Bay MGP Pre-Design Investigation Work Plan. Below is the DNR's comment. Please contact me if you have any questions.

1. The Soil Boring Advancement and Sampling Methods section, discusses logging, and sampling both primary and secondary boring locations, but only primary samples will be submitted for analysis with secondary samples held pending results of the primary samples. If a secondary sample location has visual, olfactory or PID indication of impacts or MGP residuals, the samples collected for analysis from that boring should not be held pending results.
