**Subject:** MRDS Trial Seasonal Shutdowns: O&M Manual

Derrick, I wanted to follow-up on our recent meeting at NPI. I have reviewed the 3 trial seasonal shutdown data for the SVE system at MRDS and agree that this SVE system can continue with seasonal shutdowns (December – June).

As we discussed, please update the O&M Plan to reflect that the SVE system will be operating seasonally. This does not require a new decision document since the remedy is the same.

As during the previous seasonal shutdowns, EPA and WDNR need to be notified if there is a case of rebound. The last bullet on page 9 of the October 10, 2019 Third Trial Shutdown Report notes that “Continue to use a contingency plan reflective of the current groundwater standards of 5 and 200 ug/l, respectively, for TCE and TCA. These concentrations correspond to vapor-phase threshold values of 1.0 and 60 ug/l, respectively.”

Please provide me and Candace with a copy of the updated O&M Plan.

Thanks...Howard
