Thanks for following up Disa. The last update I received was late last week from the City attorney Kathleen McDaniel. She notified me that the property owners whose wells were sampled for PFAS were provided the results. Kathleen will be having those notification letters sent to DNR. Some of the new property owners continue to experience aesthetic quality issues with some of the newer private wells that were installed due to the depth and geologic formation the wells pull water from, which results in really high total dissolved solids. The water is free of the contaminants, but has poor aesthetic quality. It is creating problems with leaving residue in sinks, bathtubs, etc. in addition to poor taste. Due to these issues, Culligan water continues to be provided to the property owners. I'm not sure what will happen next at this point because there are cost recovery negotiations currently going on between the City of Manitowoc and Newell Rubbermaid (acquired former Mirro Company) and we are supposed to receive a response from these parties by the end of this month.

Hi Steve and Tauren,

I just wanted to follow up to see if there was any updates on the Town of Newton or if DNR would like any help from us. We can join any update calls as they come up too if that's easiest.

I connected with Disa Patel at DHS this morning and let her know about the data. Rob is unavailable right now. If we need assistance from DHS then we should connect with either Disa or Curtis Hedman. Disa can be reached at 608-266-3393 and Curtis can be reached at 608-266-6677.

Kyle – please see Tauren and I when you are off the phone. Marty is out sick today. I did brief Janel just in case she is able to talk to you before RR.

4 potable wells sampled downgradient of Newton Pit for PFAS. 2 have low level detections. At this time only 1 potable well is being used (other well with detections is at a barn).

Tauren and I spoke with Dave Henderson at AECOM. Dave will be talking to the City this afternoon about the following.

Private well owner notification. 1) Relaying results and supporting documentation. 2) Potable water.

Larger PR issue. 1) next steps of sampling. 2) preparation for additional questions over holidays.

We are committed to service excellence.
