Subject: RE: Former Town of Newton Gravel Pit - NR 716.14 concurrence request

Hi Dave,

The DNR concurs with your sampling notification request based on a case-by-case basis per NR 716.14(3) as long as immediate notifications are followed when new health risks are found during sampling of VOCs and PFAS in the private wells.

Regards,

We are committed to service excellence.

Subject: Former Town of Newton Gravel Pit - NR 716.14 concurrence request

Tauren,

AECOM, on behalf of the City of Manitowoc (City), is requesting concurrence from the WDNR for our proposed potable well sampling notification schedule as required under NR 716.14(1) *Samples from water supply wells*. Our request for concurrence is in accordance with NR 716.14(3).

The City is in the middle of the May/June 2021 potable well sampling event under the WDNR approved sampling plans for VOCs and PFAS. We just received our first round of VOC lab results and are preparing them for distribution. Due to laboratory turn-around-times (TATs) we will have a large time gap (i.e. weeks) between when we receive the VOC results and when we receive the PFAS results. To facilitate communication with the interested parties (i.e. homeowner/well users, the WDNR, and the second RP), the City is proposing the following notification procedure.

For potable wells sampled for only VOCs or only PFAS:

- When sample results indicate an immediate health or welfare concern (i.e. a new VOC ES
 exceedance or a new PFAS proposed ES exceedance) the City will immediately notify the
 homeowner/well user, provide them with bottled water, and follow-up with written notification
 to the interested parties within 10 days, as per NR 716.14(1).
- If the VOC/PFAS results do not indicate an immediate health or welfare concern (i.e. results similar to historical results and/or no new VOC ES or proposed PFAS ES exceedances) the City will provide written notification of the results to the interested parties within 10 days, as per NR 716.14(1).

For potable wells sampled for both VOCs and PFAS:

- When sample results indicate an immediate health or welfare concern (i.e. a new VOC ES exceedance or a new PFAS proposed ES exceedance) the City will immediately notify the homeowner/well user and provide them with bottled water. The City will then provide the sample results to the interested parties within 10 days of being in receipt of both of the VOC and PFAS lab results, as per NR 716.14(1).
- If the VOC and/or PFAS results do not indicate an immediate health or welfare concern (i.e.
 results similar to historical results and/or no new VOC ES exceedances or no new PFAS
 proposed ES exceedances) the City will provide written notification of the results to the
 interested parties within 10 days of being in receipt of <u>both</u> of the VOC and PFAS lab results, as
 per NR 716.14(1).

The City requests that this sample result notification schedule be applicable for the current sampling event as well as future potable well sampling events that include VOC and PFAS analysis.

Thank you for your consideration of this concurrence request. Let me know if you have any questions.

Thanks dsh
