Re: **Pilot Test Results for Soil Vapor Extraction and Recovery Wells**

WRR Environmental Services
WDNR BRRTS No. 02-18-000274
WDNR FID No. 618 026 530
EPA ID No. WID 990 829 475

Dear Ms. Willkom:

On behalf of WRR Environmental Services Co., Inc. (WRR), Gannett Fleming, Inc., (GF) is submitting this report summarizing the installation activities of soil vapor extraction (SVE) vent wells SVE-4 and SVE-5 and recovery wells RW-12 and RW-13 during the week of July 31, 2017. The report also includes the analytical results of pilot tests conducted on each of the wells to evaluate their performance and initial estimated air emissions of volatile organic compounds (VOCs) for compliance monitoring.

Well Installation and Pilot Test Activities

SVE vent wells SVE-4 and SVE-5, recovery wells RW-12 and RW-13, and monitoring well W-34 were installed by Cascade Drilling of Schofield, Wisconsin, during the week of July 31, 2017. After they were installed, Cascade developed RW-12 and RW-13, and GF developed W-34. GF coordinated and provided oversight of well installation and development activities. Figure 1 shows the locations of SVE-4, SVE-5, RW-12, RW-13, and W-34.

Wells SVE-4 and SVE-5 were constructed with 15-foot-long, 4-inch-diameter PVC screens placed at a depth of 18.5 feet below the ground surface (ft bgs). The screened intervals of SVE-4 and SVE-5 extended approximately 6.5 and 10.5 ft below the water table at their respective locations so that they could be used as recovery and/or injection wells to remediate the groundwater in

-2-

those areas. Wells RW-12 and RW-13 were installed with 6-inch-diameter, 20-foot-long, stainless-steel screens and 3-foot-long sumps at 53 and 63 ft bgs, respectively. Well W-34 was constructed with a 15-foot-long, 2-inch-diameter PVC screen that extended approximately 5 feet above the water table to monitor the subsurface vacuums created during the pilot test of SVE-4. Attachment A includes the well construction and development forms for the wells listed above.

To monitor vacuums in the subsurface created during the pilot test of SVE-5, GF used a hand-auger to install monitoring points MP-2 through MP-7 along the perimeter of Warehouse A. The monitoring points were constructed with 2.5-foot-long, 1-inch-diameter PVC screens placed between 4 and 6.5 ft bgs. All monitoring point were constructed with sand filter packs around their screens and hydrated bentonite seals between 4 to 0.5 ft bgs. Figure 2 is an enlargement of the area near SVE-5 and shows the locations of MP-2 through MP-7.

Scope of Work for Pilot Tests

Brief descriptions of the pilot tests follow. Attachment B includes copies of the laboratory analytical reports and chain-of-custody records for the pilot test samples.

SVE Pilot Tests

Initial short-term pilot tests were conducted for approximately 2 hours at SVE-4 and 1 hour at SVE-5 on August 2, 2017. GF evaluated the results of the exhaust gas sample collected on August 2 from SVE-4 and SVE-5. Because the initial sample collected from SVE-4 contained elevated VOC concentrations that were likely unrepresentative of the VOC concentrations that would be removed during its operation, a supplemental extended pilot test was conducted on SVE-4. The supplemental pilot test on SVE-4 lasted approximately 80 hours from October 31 through November 3. A second sample of the SVE exhaust gas from SVE-4 was collected on November 3. Detected VOC concentrations measured in the two exhaust samples collected from SVE-4 decreased from 53 to 97 percent. The section below provides additional detail about the SVE pilot tests results.

Section NR 406.04(1)(m)3 of Wis. Adm. Code allows for up to 150,000 standard cubic feet (scf) of air to be emitted during an SVE pilot test. Based on measured flow rates and run times, GF estimates that approximately 138,000 and 2,400 scf of soil gas/air were removed during the pilot

Ms. Mae Willkom
Wisconsin Department of Natural Resources
February 12, 2018

-3-

testing of SVE-4 and SVE-5, respectively. Both totals were well below the 150,000 scf threshold for an SVE pilot test.

Recovery Well Pilot Tests

During and after development of recovery wells RW-12 and RW-13, water elevations were measured in the recovery wells and nearby piezometers. Unfortunately, WRR's production well operates at a variable pumping rate ranging up to 60 gallons per minute (gpm) during periods of peak demand, which caused the water elevations in the piezometers to fluctuate erratically. Therefore, it was not possible to conduct long-term pumping tests to determine the capture zones created by pumping either RW-12 or RW-13. However, based on the drawdown measured in each well when they were being developed, the estimated sustained pumping rates range from 1.5 to 2 gpm for RW-12 and 4 to 5 gpm for RW-13.

SVE-4 and SVE-5 Pilot Test Results

Tables 1 and 2 present a summary of the field data measured during the pilot tests of SVE-4 and SVE-5, respectively. Based on SVE pilot test results, we estimate flow rates of 50 and 20 standard cubic feet per minute (scfm) are achievable from SVE-4 and SVE-5, respectively.

Based on subsurface vacuums measured in monitoring well W-34 near SVE-4 and monitoring points MP-2 through MP-7 near SVE-5, both vent wells had a radius of influence (ROI) of about 60 feet using the one percent of applied well-head vacuum rule, per WDNR guidance. The subsurface vacuums measured in MP-2 through MP-7 and monitoring well W-33 during the SVE-5 pilot test are included on Figure 2.

Table 3 presents a summary of the VOCs detected in the exhaust gas samples collected from SVE-4 on August 2 and November 3, 2017, and from SVE-5 on August 2 and the total VOC concentration measured in each vent well. Table 3 also includes the maximum flow rates from each vent well based on the hourly threshold for each detected compound and the maximum run time at 50 and 20 scfm for SVE-4 and SVE-5, respectively, before an annual emission threshold is exceeded. The annual maximum run time estimates assume that VOC concentrations continue to decrease as measured in the two SVE-4 pilot-test exhaust gas samples. Specifically:

Ms. Mae Willkom
Wisconsin Department of Natural Resources
February 12, 2018

-4-

- The estimates assume that average annual VOC concentrations will be 95 percent lower than measured in November 2017.
- PCE in SVE-4 is the VOC with the shortest maximum run of 1.31 years (see calculations on Page 3 of Table 3).

Figure 3 provides supporting documentation for reference. As shown on Figure 3, the trend line based on the SVE-4 pilot test results projects that PCE concentrations will decrease to levels at which the PCE emission rate drops below its NR445.07 Table A threshold for:

- Stack heights 25 to 40 feet at a run time of approximately 165 hours (6.9 days).
- Stack heights less than 25 feet at a run time of approximately 255 hours (10.6 days).

Both estimates assume a flow/vapor extraction rate of 50 scfm, and we acknowledge the uncertainty inherent in extrapolating beyond the current data set.

Air Emission Estimates for RW-12 and RW-13

Table 4 presents a summary of the VOCs that were detected in the groundwater samples collected from recovery wells RW-12 and RW-13 after they were installed and developed on August 4. Also shown in Table 4 are the estimated air emissions for the total and individual VOCs measured in each well. Those estimated air emissions are based on the estimated maximum pumping rates of 2 gpm for RW-12 and 5 gpm for RW-13 and the assumption that all the VOCs in the groundwater will be removed by the groundwater treatment system.

As shown in Table 4, if all VOCs in the groundwater pumped by RW-12 and RW-13 were emitted into the air, their mass would not exceed any of the hourly or annual thresholds for any of the regulated compounds.

Systems Start-Up and Proposed SVE and RW-12/13 Sampling Plan

WRR plans to:

- Start operation of SVE-4, SVE-5, RW-12, and RW-13 at the flow rates discussed above.

Ms. Mae Willkom
Wisconsin Department of Natural Resources
February 12, 2018

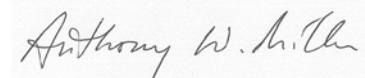

-5-

- Collect exhaust gas samples for VOCs from the vacuum blowers that extract vapors from SVE-4 and SVE-5 once each day during the first three days of operation, weekly for the next three weeks, and monthly thereafter.
- Collect samples of the pumped groundwater from RW-12 and RW-13 monthly and have the samples analyzed for VOCs.
- Evaluate VOC concentrations and the flow rates of unit operations for soil and groundwater remediation to ensure that the NR 406.04(2) exemption threshold of 5.7 lb/hr for total VOCs and NR 445.07 Table A emission thresholds for specific compounds are not exceeded.

Summaries of the operation and the mass of VOCs removed by each of the newly installed recovery wells and new/existing SVE vacuum blowers will be included in future status reports. In the meantime, please let us know if you have any questions or need additional information regarding the pilot test results or the proposed operation of the new remediation wells.

Sincerely,

NOTES:

Concentrations are in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).

Samples were collected on August 2, 2017, and analyzed by ALS Laboratory of Simi Valley, CA, for VOCs using Method TO-15. Only compounds measured in one or more samples are shown on this table.

NR 445.07 Table A thresholds are from Wisconsin Administrative Code updated March 2016.

1,2-Dichloroethene = cis-1,2-Dichloroethene and trans-1,2-Dichloroethene concentrations, combined.

Total VOCs = Summation of detected volatile organic compounds.

Trimethylbenzenes = 1,2,4-Trimethylbenzene and 1,3,5-Trimethylbenzene concentrations, combined.

Xylenes = m&p-Xylene and o-Xylene concentrations, combined.

-- = Not applicable.

FOOTNOTES:

(1) Initial short-term pilot test conducted 09:45-11:55 on 8/2/17 and sample collected at 11:20 on 8/2/17.

(2) Supplemental extended pilot test conducted from 09:35 on 10/31/17 to 17:23 on 11/3/17 (i.e., it lasted approximately 80 hours) and sample collected at 17:20 on 11/3/17.

(3) Max Q = maximum "allowable" flow rate at pilot-test concentration. Q above this rate would exceed hourly threshold.

(4) Maximum Run Time = Max RT, assuming Q=50/20 scfm for SVE-4/5 and 5% pilot-test concentration. Longer RT would exceed annual threshold.

(5) Yellow-shaded cells highlight lowest Max Q and shortest Max RT following extended pilot test at SVE-4 for reference. See Page 3 of this table for example calculations.

TABLE 3

SVE-4/SVE-5 PILOT-TEST EXHAUST GAS ANALYTICAL RESULTS & AIR EMISSION THRESHOLDS

EXAMPLE CALCULATIONS:

1. Max Q for SVE-4 based on total VOCs threshold emission rate and 11/3/17 concentration follows.

$$Q_c = \dot{m} = \frac{c}{\rho} = \frac{5.7 \text{ lb}}{\frac{454E6 \mu\text{g}}{\frac{1 \text{ lb}}{\frac{1 \text{ hr}}{\frac{60 \text{ min}}{(3.28 \text{ ft})^3}}}} \cdot \frac{5,666,600 \mu\text{g}}{\frac{1 \text{ m}^3}{(1 \text{ m})^3}}} = 269 \text{ scfm}$$

2. Max RT for SVE-4 based on PCE annual threshold for stacks <25 ft, assumed average concentration, & Q=50 scfm follows.

$$RT_{PCE} = \frac{m}{Q_c} = \frac{301 \text{ lb}}{\frac{50 \text{ ft}^3}{\frac{140,000 \mu\text{g}}{\frac{1 \text{ min}}{\frac{454E6 \mu\text{g}}{\frac{(3.28 \text{ ft})^3}{\frac{1 \text{ hr}}{\frac{1 \text{ day}}{\frac{1 \text{ year}}{4.30E-05 \text{ lb}}}}}}}}}} = 1.31 \text{ yr}$$

3. Concentration at which SVE-4 PCE emission drops below its NR 445.07 Table A threshold for stacks = 25 to <40 feet follows.

$$c_{PCE} = \frac{m}{QRT} = \frac{1,237 \text{ lb}}{\frac{50 \text{ ft}^3}{\frac{1 \text{ min}}{\frac{1 \text{ yr}}{\frac{454E6 \mu\text{g}}{\frac{(3.28 \text{ ft})^3}{\frac{1 \text{ hr}}{\frac{1 \text{ day}}{\frac{1 \text{ year}}{\frac{25 \text{ lb}}{\frac{1 \text{ yr}}{\frac{454E6 \mu\text{g}}{\frac{(3.28 \text{ ft})^3}{\frac{1 \text{ lb}}{\frac{(1 \text{ m})^3}{\frac{60 \text{ min}}{\frac{24 \text{ hr}}{\frac{365 \text{ days}}{\frac{\mu\text{g}}{\text{m}^3}}}}}}}}}}}}}}}}}} = 754,087 \frac{\mu\text{g}}{\text{m}^3}$$

where:

c = Concentration in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).

m = annual mass threshold in pounds (lb).

\dot{m} = threshold emission rate in pounds per hour (lb/hr).

Q = flow rate in standard cubic feet per minute (scfm = ft^3/min).

RT = run time in years (yr).

WRR ENVIRONMENTAL SERVICES CO., INC.

Facility/Project Name WRR Environmental Services	County Name Eau Claire	Well Name RW-13
Facility License, Permit or Monitoring Number	County Code 18	Wis. Unique Well Number VQ590

1. Can this well be purged dry? Yes No

2. Well development method

- surged with bailer and bailed 41
- surged with bailer and pumped 61
- surged with block and bailed 42
- surged with block and pumped 62
- surged with block, bailed and pumped 70
- compressed air 20
- bailed only 10
- pumped only 51
- pumped slowly 50
- Other _____

3. Time spent developing well

240 min.

4. Depth of well (from top of well casing)

68.0 ft.

5. Inside diameter of well

6.00 in.

6. Volume of water in filter pack and well casing

_____ gal.

7. Volume of water removed from well

720.0 gal.

8. Volume of water added (if any)

_____ gal.

9. Source of water added

10. Analysis performed on water added? Yes No
(If yes, attach results)

17. Additional comments on development:

N 44.756376
W 91.458352

Before Development After Development

11. Depth to Water
(from top of well casing)
12.10 ft. _____ ft.

Date b. 08/02/2017 mm dd yy 08/03/2017 mm dd yy

Time c. 3:15 a.m. 6:15 p.m.

12. Sediment in well bottom _____ inches _____ inches

13. Water clarity Clear 10 Turbid 15

(Describe) Bar, Cloudy

Clear 20 Turbid 25

(Describe) Cloudy/Clear

Fill in if drilling fluids were used and well is at solid waste facility:

14. Total suspended solids _____ mg/l _____ mg/l

15. COD _____ mg/l _____ mg/l

16. Well developed by: Name (first, last) and Firm

LAB REPORTS AND CHAIN-OF-CUSTODY RECORDS FOR PILOT TEST SAMPLES

August 18, 2017

The Analytical Results & QA/QC
Data included with this report were
reviewed and approved by AWM
on 08/18/17.

Tony Miller
Gannett Fleming
8025 Excelsior Drive
Madison, WI 53717

RE: Project: 55929.005 WRR
Pace Project No.: 40154528

Dear Tony Miller:

Enclosed are the analytical results for sample(s) received by the laboratory on August 05, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

QUALIFIERS

Project: 55929.005 WRR

Pace Project No.: 40154528

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

R1 RPD value was outside control limits.

RE: WRR / 55929.005

Dear Anthony:

Enclosed are the results of the samples submitted to our laboratory on August 9, 2017. For your reference, these analyses have been assigned our service request number P1703872.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Respectfully submitted,

ALS | Environmental

Project: WRR / 55929.005

Service Request No: P1703872

CASE NARRATIVE

The samples were received intact under chain of custody on August 9, 2017 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the samples at the time of sample receipt.

Volatile Organic Compound Analysis

The samples were analyzed for volatile organic compounds in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. This procedure is described in laboratory SOP VOA-TO15. The analytical system was comprised of a gas chromatograph / mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator. This method is included on the laboratory's NELAP and DoD-ELAP scope of accreditation. Any analytes flagged with an X are not included on the NELAP or DoD-ELAP accreditation.

The upper control criteria were exceeded for benzyl chloride and 1,2-dibromo-3-chloropropane in the Continuing Calibration Verification (CCV). Since the apparent problems equate to a potential high bias and the field samples did not contain the analytes in question, the data quality has not been affected. No corrective action was required.

The containers were cleaned, prior to sampling, down to the method reporting limit (MRL) reported for this project. Please note, projects which require reporting below the MRL could have results between the MRL and method detection limit (MDL) that are biased high.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.

Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.

ALS Environmental Sample Acceptance Check Form

Client: Gannett Fleming, Incorporated

Work order: P1703872

Project: WRR / 55929.005

Sample(s) received on: 8/9/17

Date opened: 8/9/17

by: E.PEREZ

Note: This form is used for all samples received by ALS. The use of this form for custody seals is strictly meant to indicate presence/absence and not as an indication of compliance or nonconformity. Thermal preservation and pH will only be evaluated either at the request of the client and/or as required by the method/SOP.

		<u>Yes</u>	<u>No</u>	<u>N/A</u>
1	Were sample containers properly marked with client sample ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	Did sample containers arrive in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	Were chain-of-custody papers used and filled out?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	Did sample container labels and/or tags agree with custody papers?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5	Was sample volume received adequate for analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6	Are samples within specified holding times?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7	Was proper temperature (thermal preservation) of cooler at receipt adhered to?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8	Were custody seals on outside of cooler/Box/Container? Location of seal(s)? _____ Sealing Lid?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	Were signature and date included?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Were seals intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9	Do containers have appropriate preservation , according to method/SOP or Client specified information? Is there a client indication that the submitted samples are pH preserved? Were VOA vials checked for presence/absence of air bubbles?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Does the client/method/SOP require that the analyst check the sample pH and <u>if necessary</u> alter it?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10	Tubes: Are the tubes capped and intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11	Badges: Are the badges properly capped and intact? Are dual bed badges separated and individually capped and intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Explain any discrepancies: (include lab sample ID numbers):

LABORATORY REPORT

November 20, 2017

The Analytical Results & QA/QC
Data included with this report were
reviewed and approved by AWM
on 11/21/17.

Anthony Miller
Gannett Fleming, Incorporated
8025 Excelsior Dr.
Madison, WI 53717

Dear Anthony:

Enclosed are the results of the sample submitted to our laboratory on November 13, 2017. For your reference, these analyses have been assigned our service request number P1705727.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Respectfully submitted,

ALS | Environmental

Client: Gannett Fleming, Incorporated

Service Request No: P1705727

CASE NARRATIVE

The sample was received intact under chain of custody on November 13, 2017 and were stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the sample at the time of sample receipt.

Volatile Organic Compound Analysis

The sample was analyzed for volatile organic compounds in accordance with EPA Method TO-15 from the Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air, Second Edition (EPA/625/R-96/010b), January, 1999. This procedure is described in laboratory SOP VOA-TO15. The analytical system was comprised of a gas chromatograph / mass spectrometer (GC/MS) interfaced to a whole-air preconcentrator. This method is included on the laboratory's NELAP and DoD-ELAP scope of accreditation. Any analytes flagged with an X are not included on the NELAP or DoD-ELAP accreditation.

The containers were cleaned, prior to sampling, down to the method reporting limit (MRL) reported for this project. For projects requiring DoD QSM 5.1 compliance canisters were cleaned to <1/2 the MRL. Please note, projects which require reporting below the MRL could have results between the MRL and method detection limit (MDL) that are biased high.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.

Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.

**ALS Environmental
Sample Acceptance Check Form**

Client: Gannett Fleming, Incorporated

Work order: P1705727

Project:

Sample(s) received on: 11/13/17

Date opened: 11/13/17

by: ADAVID

Note: This form is used for all samples received by ALS. The use of this form for custody seals is strictly meant to indicate presence/absence and not as an indication of compliance or nonconformity. Thermal preservation and pH will only be evaluated either at the request of the client and/or as required by the method/SOP.

		<u>Yes</u>	<u>No</u>	<u>N/A</u>
1	Were sample containers properly marked with client sample ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	Did sample containers arrive in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	Were chain-of-custody papers used and filled out?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	Did sample container labels and/or tags agree with custody papers?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5	Was sample volume received adequate for analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6	Are samples within specified holding times?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7	Was proper temperature (thermal preservation) of cooler at receipt adhered to?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8	Were custody seals on outside of cooler/Box/Container? Location of seal(s)? _____ Sealing Lid?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	Were signature and date included?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Were seals intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9	Do containers have appropriate preservation , according to method/SOP or Client specified information? Is there a client indication that the submitted samples are pH preserved? Were VOA vials checked for presence/absence of air bubbles?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Does the client/method/SOP require that the analyst check the sample pH and <u>if necessary</u> alter it?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10	Tubes: Are the tubes capped and intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11	Badges: Are the badges properly capped and intact? Are dual bed badges separated and individually capped and intact?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Explain any discrepancies: (include lab sample ID numbers):
