Subject: Carbon Treatment System Maintenance Reminder

Dear Mr. Lucht:

This letter is being sent to you as a reminder to perform the annual maintenance of your carbon treatment system installed. The system was installed to remove volatile organic compounds (VOCs) from your water supply thus making your water safe for use. The filter systems use granular carbon and require annual maintenance to effectively remove contaminants from the water and to prevent bacterial contamination of the filters.

Changing the filter cartridges annually is the best method to ensure that the system is effectively removing contamination. Unfortunately, the EPA program that has paid for two years of filter changes could not contribute funds for additional maintenance beyond the change outs performed in 2015 and 2016, and the Department of Natural Resources cannot use environmental fund moneys to pay for these filter changes due to a limitation in how environmental fund moneys can be spent.

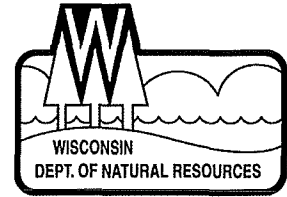

The department contracted with Maher Water Corporation, in Stevens Point, WI, to install these treatment systems and the EPA has contracted with the same company to perform maintenance of these systems in 2015 and 2016. Although these systems were installed and maintained by Maher, any qualified water treatment company should be capable of performing maintenance (carbon change-out) on these systems.

If you have any questions do not hesitate to contact me by phone at (715) 839-3750 or by email at matthewa.thompson@wisconsin.gov.

Sincerely,

Matt Thompson
