Subject: **Report of Groundwater Natural Attenuation Monitoring**
May 2016 through April 2017
Former Kraft Cleaners
303 - 305 South 2nd Avenue, Wausau, Wisconsin
WDNR BRRTS No. 02-37-000294

Dear Mr. Schock:

AECOM has prepared this report of Groundwater Natural Attenuation Monitoring for the subject site. Groundwater monitoring documented in this report was pre-approved by the Wisconsin Department of Natural Resources under the Dry Cleaning Environmental Response Fund (DERF) program. The work included groundwater sampling, analysis, data evaluation, and reporting for the period May 2016 through April 2017. Historical groundwater monitoring results are also included.

The City of Wausau Community Development Authority authorized AECOM to perform the work described herein by acceptance of our Amendment No. 6, on December 16, 2015.

Thank you for the opportunity to assist the City of Wausau Community Development Authority with this project. Please contact us if you have any questions or comments regarding the information presented.

Yours sincerely,

Kyle Wagoner, P.G., CHMM

Executive Summary

AECOM performed quarterly groundwater natural attenuation monitoring as part of Amendment No. 6 to the Proposal for Environmental Services Site Investigation and Interim Action. Fieldwork and laboratory analysis associated with the natural attenuation monitoring was performed between May 2016 and April 2017. During this period, 14 on- and off-site monitoring wells were sampled quarterly to monitor natural attenuation of chlorinated volatile organic compounds (VOCs) on the source property and downgradient adjacent properties.

Based on results obtained from groundwater natural attenuation monitoring, AECOM concludes the following:

- Depths to the water table beneath the site generally ranged between 15.5 and 18.5 feet below ground surface (bgs) during natural attenuation monitoring, which is consistent with historical water table depths.

- The water table typically sloped to the southeast towards the Wisconsin River at an average hydraulic gradient of approximately 0.006 feet per foot (ft/ft) during the monitoring period, which is unchanged from historic hydraulic conditions for the site.

- Perchloroethylene (PCE), trichloroethylene (TCE), and cis 1,2-dichloroethene (cis 1,2-DCE) concentrations exceeding the NR 140 Enforcement Standard (ES) were present in groundwater, as indicated from analytical results for groundwater samples collected from on-site and downgradient off-site monitoring wells during the May 2016, August 2016, November 2016, and April 2017 groundwater monitoring events.

- TCE and cis 1,2-DCE are typical daughter products associated with the natural bio-reduction (dechlorination) of PCE, giving evidence that groundwater remediation by natural attenuation has been occurring and is anticipated to continue long-term.

- Groundwater monitoring performed through April 2017 has shown that concentrations of dissolved-phase chlorinated VOCs are apparently being passively reduced by natural attenuation, resulting in a decreasing or stable plume.

Appendix C

1. General Information

1.1 Property Owner and Responsible Party

The property owner and responsible party (RP) for the Former Kraft Cleaners site is:

The Community Development Authority of the City of Wausau
407 Grant Street
Wausau, Wisconsin 54403

Contact: Christian Schock, Director

Telephone: (715) 261-6686

Email: Christian.Schock@ci.wausau.wi.us

1.2 Environmental Consulting Firm and Subcontractor

The environmental consulting firm is:

AECOM
200 Indiana Avenue
Stevens Point, Wisconsin 54481

Contact: Kyle Wagoner

Telephone: (715) 342-3038

Email: kyle.wagoner@aecom.com

The subcontract analytical laboratory is:

Pace Analytical Services, Inc.
1241 Bellevue Street, Suite 9
Green Bay, Wisconsin 54302
Wisconsin Certification No. 405132750

Contact: Chris Hyska

Telephone: (920) 469-2436

Email: chris.hyska@pacelabs.com

1.3 Site Address, Location, and Physical Description

General site information includes the following:

Address: 303-305 South 2nd Avenue, Wausau, Wisconsin

Location: SW 1/4 of the SE 1/4, Section 26, Township 29 North, Range 7 East (see Figure 1)

County: Marathon

WTM91 coordinates for the property: Northwest corner: X 548,550 Y 498,636

Northeast corner: X 548,569 Y 498,636

Southeast corner: X 548,569 Y 498,626

Southwest corner: X 548,550 Y 498,626

Latitude: 44.96° (center of property)

Longitude: -89.64° (center of property)

The subject property is relatively level, occupies an area of 0.13 acres, and is located within a commercial/residential-zoned area. A concrete slab, which was the floor slab to the former dry cleaner building, covers a majority of the property. The eastern portion of the property is vacant and covered with brushy trees and weeds. The property is bordered to the west by South 2nd Avenue, to the north by Domino's Pizza, to the east/northeast by two apartment buildings, and to the south by a three-story office building. A site features map is presented as Figure 2.

2. Background Information; Groundwater Sampling and Analysis, and Wastewater Disposal; Site Hydrogeology; and Analytical Results

2.1 Background Information

A dry cleaning business operated on the subject property under various owners and names from 1945 through 1993. The dry cleaner building was razed in 2008; however, the concrete floor slab remains on the property. The City of Wausau acquired ownership of the subject property in 2008.

AECOM also initiated a Wisconsin Department of Natural Resources (DNR)-approved Interim Action in 2014 by installing a soil vapor extraction (SVE) system having two vapor extraction wells to begin remediation of PCE contaminated soil in the source area and to remove PCE vapor beneath the apartment building at 113 Callon Street. Operation of the SVE system started in June 2014.

In May 2015, AECOM expanded the SVE system from two to six vapor extraction wells in accordance with AECOM's Remedial Design Report for Interim Action, dated August 27, 2014. The system was re-started in May 2015 and will continue to operate until chlorinated VOC vapor in the source soil and subsurface next to adjacent buildings are permanently reduced to levels protective of human health and the environment. Construction of the SVE system was documented in AECOM's Operation and Maintenance Plan, dated July 2, 2015. No further expansion of the SVE system is planned at this time.

In May 2016, AECOM initiated a DNR-approved quarterly groundwater monitoring program for a period of two years. Field and analytical results for the first year of groundwater monitoring, and historic field and analytical results for past monitoring events are included in this report.

2.2 Groundwater Sampling and Analysis, and Wastewater Disposal

Four rounds of groundwater samples were collected from the network of on-site and off-site monitoring wells and piezometer using the "low-flow" method in May 2016, August 2016, November 2016, and April 2017. One duplicate groundwater sample was collected during each sampling event for quality control purposes. Groundwater sampling was performed according to procedures described in AECOM's previous NR 716 SI Report, dated February 25, 2011. Copies of completed well purging and sample collection forms are provided in Appendix A. Each sample set was laboratory analyzed by Pace for VOCs (U.S. EPA Method 8260).

Stabilized water levels were measured in each well to determine the local groundwater flow direction and gradient during each sampling event. Water levels were recorded on well purging and sample collection forms, copies of which are provided in Appendix A.

Water purged from the monitoring wells and piezometer was containerized and transported to a municipal wastewater treatment plant in Rib Mountain, Wisconsin, after each groundwater sampling event. Water purged from non-impacted wells, as determined from laboratory analytical results, was disposed of on the ground surface next to the wells. Wastewater disposal documentation is provided in Appendix B.

2.3 Site Hydrogeology

A summary of groundwater elevations and field measurements recorded during the groundwater natural attenuation monitoring and previous SI is provided in Table 1. Depths to the water table beneath the site generally ranged between 15.5 and 18.5 feet bgs during natural attenuation monitoring, which are relatively consistent with historical water table depths.

Water table elevations and groundwater flow directions for the May 2016, August 2016, November/December 2016, and April 2017 natural attenuation monitoring events are illustrated on

Figures 3A, 3B, 3C, and 3D, respectively. As shown on Figures 3A, 3B, 3C, and 3D, the water table typically sloped to the southeast at a hydraulic gradient ranging from approximately 0.004 to 0.007 feet per foot (ft/ft). The Wisconsin River provides a downgradient hydraulic boundary approximately 650 feet southeast of the site.

Other site-specific, hydrogeological statistics previously calculated and documented in AECOM's NR 716 SI Report, dated February 25, 2011, included the following:

- Average hydraulic conductivity: 6.8×10^{-2} centimeters per second (cm/s)
- Groundwater flow velocity: approximately 1,540 feet per year

These statistics are considered representative for the site during the most recent monitoring periods.

2.4 Analytical Results

PCE, TCE, and cis-1,2 DCE were the primary dissolved-phased chlorinated VOCs detected in groundwater at the Former Kraft Cleaners Site. Laboratory analytical results indicated that PCE and TCE exceeded the NR 140 ES of 5 micrograms per liter (µg/L) for samples collected from MW-1, MW-2, MW-6, MW-7, and MW-8 for one or more sampling events between May 2016 and April 2017. Cis 1,2-dichoroethene was also reported as exceeding its ES of 7.0 µg/L in the samples collected from MW-6 during the November 2016 and April 2017 monitoring events. The laboratory analytical results also indicated that the NR 140 preventative action limit (PAL) of 0.5 µg/L for PCE was exceeded only at the locations of MW-3, MW-5, and PZ-1 at least once between May 2016 and April 2017. Similarly, cis 1,2-DCE only exceeded the PAL of 7 µg/L at the locations of MW-1, MW-2, and MW-7.

Generally, declining or stable concentrations of PCE, TCE, and cis 1,2-DCE detected in groundwater during the May 2016 through April 2017 monitoring events appear to indicate that dissolved-phased chlorinated VOCs are being passively reduced through natural attenuation when compared to results from 2010 and earlier. A summary of recent and historical groundwater analytical results is provided in Table 2.

As shown in Figures 4A through 5D, PCE and TCE concentrations exceeding the ES and PAL extended to the southeast (downgradient), beyond the Former Kraft Cleaners property, beneath adjacent properties and municipal right of way. Analytical results for off-site monitoring wells MW-10 through MW-13 installed in January and April of 2016 indicated that the downgradient extent of the PCE and TCE groundwater plume has been adequately defined.

3. Conclusions and Recommendations

3.1 Summary of Conclusions

Based on results obtained from the groundwater monitoring performed at the Former Kraft Cleaners site during the period of May 2016 through April 2017, AECOM concludes the following:

- Depths to the water table beneath the site generally ranged between 15.5 and 18.5 feet bgs during natural attenuation monitoring, which is consistent with historical water table depths.
- The water table typically sloped to the southeast towards the Wisconsin River at an average hydraulic gradient of approximately 0.006 feet per foot (ft/ft) during the monitoring period, which is unchanged from historic hydraulic conditions for the site.
- PCE, TCE, and cis 1,2-dichloroethene concentrations exceeding the NR 140 ES's were present in groundwater, as indicated from analytical results for groundwater samples collected from on-site and downgradient off-site monitoring wells during the May 2016, August 2016, November 2016, and April 2017 groundwater monitoring events.
- TCE and cis 1,2-DCE are typical daughter products associated with the natural bio-reduction (dechlorination) of PCE, giving evidence that groundwater remediation by natural attenuation has been occurring and is anticipated to continue long-term.
- Groundwater monitoring performed through April 2017 has shown that concentrations of dissolved-phase chlorinated VOCs are apparently being passively reduced by natural attenuation, resulting in a decreasing or stable plume.

3.2 Recommendations

The following recommendations are based on groundwater natural attenuation monitoring results obtained for the Former Kraft Cleaners site:

- The on- and off-site degrees and extent of chlorinated VOC contaminated groundwater have been adequately defined. Therefore, further groundwater investigation is not warranted.
- A second year of quarterly groundwater monitoring, which has already been approved by the DNR, is warranted to confirm that groundwater remediation by the continued use of natural attenuation is a viable alternative for the site.

Notes:

[B]: Elevation are referenced to the North American Vertical Datum of 1988 (NAVD88)

[C]: Water level measured from top of PVC.
Well MW-9 replaced April 12, 2016.
Well MW-9 was abstructed on August 16-17, 2016, and could not be sampled.

TABLE 2

Notes:
(µg/L): Micrograms per Liter
VOCs: Volatile Organic Compounds
Total TMB: 1,2,4 and 1,3,5-Trimethylbenzenes
J: Analyte detected between limit of detection and limit of quantitation.
<: Less than laboratory detection limit
Bold data = NR 140 Preventative Action Limit Exceedance, updated February 2017
Bold data and border = NR 140 Enforcement Standard Exceedance, updated February 2017
MW-9 was not found and could not be sampled on 6/23/2015
Well MW-9 was abstructed on August 16-17, 2016, and could not be sampled.
NS: Not sampled

RE: Project: 60299959 FORMER KRAFT CLEANERS
Pace Project No.: 40131990

Dear Kyle Wagoner:
Enclosed are the analytical results for sample(s) received by the laboratory on May 07, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

PROJECT NARRATIVE

Project: 60299959 FORMER KRAFT CLEANERS
Pace Project No.: 40131990

Method: **EPA 8260**
Description: 8260 MSV
Client: AECOM, Inc. - Stevens Point
Date: May 11, 2016

General Information:
16 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/33369

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40131983019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 1332492)
  - Bromomethane

R1: RPD value was outside control limits.

- MSD (Lab ID: 1332492)
  - Bromomethane

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, Inc.
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

QUALIFIERS

Project: 60299959 FORMER KRAFT CLEANERS
Pace Project No.: 40131990

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G	Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40137062

Dear Kyle Wagoner:
Enclosed are the analytical results for sample(s) received by the laboratory on August 20, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

PROJECT NARRATIVE

Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40137062

Method: **EPA 8260**
Description: 8260 MSV
Client: AECOM, Inc. - Stevens Point
Date: August 25, 2016

General Information:
15 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 232938

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40137019001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1381070)
  - Styrene
- MSD (Lab ID: 1381071)
  - Styrene

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40137062

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

RE: Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40142986

Dear Kyle Wagoner:
Enclosed are the analytical results for sample(s) received by the laboratory on December 06, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

PROJECT NARRATIVE

Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40142986

Method: **EPA 8260**
Description: 8260 MSV
Client: AECOM, Inc. - Stevens Point
Date: December 13, 2016

General Information:
15 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: 60299959 FMR KRAFT CLEANERS
Pace Project No.: 40142986

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 60299959 KRAFT CLEANERS
Pace Project No.: 40148441

Dear Kyle Wagoner:
Enclosed are the analytical results for sample(s) received by the laboratory on April 15, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

PROJECT NARRATIVE

Project: 60299959 KRAFT CLEANERS
Pace Project No.: 40148441

Method: **EPA 8260**
Description: 8260 MSV
Client: AECOM, Inc. - Stevens Point
Date: April 19, 2017

General Information:
16 samples were analyzed for EPA 8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

Trichloroethene	ug/L	<0.33	50	50	54.0	57.0	108	114	70-131	5	20	
Trichlorofluoromethane	ug/L	<0.18	50	50	67.7	71.8	135	144	50-150	6	20	
Vinyl chloride	ug/L	<0.18	50	50	61.6	65.9	123	132	49-133	7	20	
4-Bromofluorobenzene (S)	%						100	99	70-130			
Dibromofluoromethane (S)	%						119	120	70-130			
Toluene-d8 (S)	%						87	87	70-130			

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1241 Bellevue Street - Suite 9
Green Bay, WI 54302
(920)469-2436

QUALIFIERS

Project: 60299959 KRAFT CLEANERS
Pace Project No.: 40148441

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
