## 1.0 INTRODUCTION

---

Coulee Environmental Solutions™, a division of The OS Group, LLC (CES) has completed annual groundwater monitoring activities for the Onalaska Municipal Landfill Superfund site located on Sportsman Club Road in the Town of Onalaska, La Crosse County, Wisconsin. The purpose of the activities was to conduct routine semi-annual groundwater sampling events at the site. While the sampling events typically have occurred in April and October of each year, the 2020 events were conducted in July and November due to delays caused by the coronavirus pandemic. This report covers two events: July and November 2020.

### 1.1 SITE LOCATION AND DESCRIPTION

The Town of Onalaska Landfill is located approximately 10 miles north of the City of La Crosse near the confluence of the Mississippi and Black Rivers. The site is located on the far northwestern corner of Brice Prairie and is accessible via Sportsman Club Road. The 11-acre site was a sand and gravel quarry in the early 1960s. After the quarry operations ceased in the mid-1960s, the Town of Onalaska began using it as a municipal landfill accepting both municipal trash and industrial wastes between 1969 and 1980. The landfill was closed in 1980.

The site is located in the SE ¼ of Section 9, Township 17N, R8W. A site location map is provided as Figure 1. A site plan view is provided as Figure 2.

## 2.0 FIELD ACTIVITIES

---

### 2.1 GROUNDWATER MONITORING

Groundwater samples were collected from select groundwater monitoring wells on July 24 – 31, and November 4, 2020, per the scope of work developed by the WDNR. Prior to collection of the samples, CES field personnel opened all shallow and mid-depth groundwater monitoring wells. After water levels stabilized for more than one hour, CES field personnel measured depth to water level in each monitoring well. Monitoring wells to be sampled were then purged using dedicated submersible pumps and tubing. During purging, CES field personnel measured field parameters (dissolved oxygen, ORP, specific conductance, temperature and pH) using a YSI 556 multi-meter with a flow-through cell. Purging was considered complete when the field parameters stabilized per WDNR's groundwater sampling desk reference guidance, typically requiring 30 to 60 minutes per well. Monitoring well purge water was discharged to the ground per the WDNR's scope of work. Once purging was complete, CES field personnel collected groundwater samples for the parameters listed in Appendix A. Samples for metals analysis were field filtered with 0.45-micron filters. Groundwater samples were preserved and stored on ice and shipped under chain of custody to Pace Analytical in Green Bay, WI for analyses. Copies of the laboratory analytical reports are provided in Attachment B.

### 2.2 POTABLE WELL SAMPLING

CES field personnel collected water samples from private potable wells PW-1, PW-2, PW-4, PW-5 and PW-6 during the July 2020 sampling event. On July 31, 2020 in a telephone call with CES personnel, the owner of potable well PW-3 declined to have the well sampled. CES field personnel purged all potable wells for a minimum of ten minutes prior to sampling, until temperature stabilized. Samples were preserved and shipped on ice to Pace Analytical in Green Bay, WI for volatile organic compounds (VOCs) and metals analyses. Samples for metals analysis from the potable wells were not field filtered. Copies of the laboratory analytical reports are provided in Appendix B.

## 3.0 RESULTS

---

### 3.1 WATER LEVELS AND FLOW DIRECTION

During the July and November 2020 groundwater sampling events, groundwater was encountered at depths ranging from approximately 4 to 30 feet below ground surface. Potentiometric surface maps were developed for both the shallow and mid-depth wells. On the maps, shallow wells were denoted with a “S” and “PZ” suffix, and mid-depth wells were denoted with a “M” suffix. During each sampling event, the groundwater flow direction appeared to be to the south-southwest direction. Potentiometric Surface Maps for each sampling event are provided in Figure 3 through 6.

### 3.2 GROUNDWATER RESULTS

During the July 2020 sampling event, all twenty-six (26) monitoring wells were sampled for metals, TOC, and alkalinity. Thirteen (13) of the twenty-six (26) monitoring wells were also analyzed for VOCs. During the November 2020 sampling event, five “shallow” monitoring wells (MW-4S, MW-5S, MW-17S, PZ-5 and PZ-6) were analyzed for VOCs, metals, and TOC

For each sampling event, laboratory analytical results were similar to their prior year’s results with arsenic, iron, and manganese commonly detected at concentrations above the NR 140 enforcement standards. During the July sampling event, barium was detected above the NR140 preventive action limit in wells MW-2M, MW-8M, MW-15M, MW-16M, and MW-17M and above the enforcement standard in MW-6M. The most commonly detected VOCs included trimethylbenzenes (MW-4S, MW-5S, MW-17S, and PZ-5) and naphthalene (MW-5S, MW-14S, and MW-16S). Other VOC compounds detected above applicable standards include benzene, which was detected above the enforcement standard in MW-16M and MW-17S during the July 2020 sampling event.

### 3.3 APRIL 2020 POTABLE WELL RESULTS

Laboratory analysis of the potable well samples detected iron and/or manganese in potable wells PW-1, PW-4, PW-5 and PW-6. Iron was detected above the NR 140 enforcement standard in PW-1, PW-4 and PW-5. Manganese was detected above the NR 140 preventive action limit in PW-1, PW-4, and PW-6 and above the enforcement standard in PW-5. No VOC constituents were detected in any of the potable well samples.

## 4.0 SUMMARY AND CONCLUSIONS

---

A summary of the 2020 Groundwater Monitoring at the Town of Onalaska Superfund Site follows:

- Groundwater samples were collected from twenty-six (26) shallow and mid-depth monitoring wells during the July 2020 sampling event and analyzed for metals, TOC and alkalinity. In addition, 13 of the samples were analyzed for VOCs.
- Groundwater samples were collected from five shallow monitoring wells (MW-4S, MW-5S, MW-17S, PZ-5 and PZ-6) in November 2020 and analyzed for VOCs, metals, and TOC analysis.
- Potable water samples were collected from five (5) potable wells (PW-1, PW-2, PW-4, PW-5 and PW-6) during the July 2020 sampling event and analyzed for VOCs and metals.
- A request was made to sample PW-3 during the July 2020 sampling event; however, the homeowner declined to have his well sampled.
- The depth to water was measured in all shallow and mid-depth monitoring wells prior to sampling during each sampling event. Groundwater elevations were calculated, and flow maps were developed. The groundwater flow direction was primarily to the south-southwest in both the shallow and mid-depth wells during both sampling events.
- Arsenic, iron and manganese were detected in monitoring wells at concentrations above the NR 140 enforcement standards during all three sampling events. Barium was detected in five (5) mid-depth wells at concentrations above the PAL and in one (1) mid-depth well at a concentration above the ES during the July sampling event.
- 1,2,4-trimethylbenzene was detected at concentrations above either the NR 140 ES or PAL in monitoring wells MW-4S, MW-5S, MW-17S, and PZ-5. Naphthalene was detected above the NR 140 PAL in wells MW-5S, MW-14S, and MW-16S.
- No VOCs were detected in any of the five (5) potable well samples.
- Iron and manganese were detected in four (4) potable well samples at concentrations above either the PAL or ES. Iron was detected above the ES in PW-1, PW-4 and PW-5. Manganese exceeded the PAL in PW-1, PW-4 and PW-6 and exceeded the ES in PW-5.

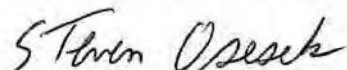

## 5.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

---

This document has been prepared by and under the supervision of the environmental professionals certifying below:

### Prepared By:

I, Steven Oseseck, hereby certify that I am a scientist as that term is defined in s. NR 712.03 (3), Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.

**Table 1**  
**Notes**  
**Summary of Detected Compounds**  
**Onalaska Superfund Landfill**  
**Braun Intertec Project #LC-13-01254.00**

For the volatile organic compound (VOC) only; the compounds reported are the only VOC that have been detected during the sampling event dates shown.

Yellow highlighted cells indicate the compound exceeds the WDNR preventive action limit (PAL).

Yellow highlighted cell and bold number indicates the compound exceeds the WDNR PAL and enforcement standard (ES).

The ES and PAL criteria for trimethylbenzene (TMB) is the sum of 1,2,4-TMB and 1,3,5-TMB.

< indicates the compound was not detected at or above the method detection limit.

--- indicates that there is no available criteria associated with the specified compound or the compound was not analyzed.

Residential wells are sampled for VOC and metals only.

## **APPENDIX A**

### GROUNDWATER SAMPLING SCHEDULE

## Groundwater Sampling Schedule – Onalaska Landfill

Sampling shall be conducted in July, November and April (2021) of this contract year according to the following schedule. The first round of sampling shall be conducted no later than July 31, 2020. Wells to be sampled for VOCs, metals, alkalinity (July & April rounds only), total organic carbon, and field parameters are:

July & November 2020 & April 2021:	MW-4S, MW-5S, MW-17S, PZ-5, PZ-6
July 2020 & April 2021:	MW-6S, MW-6M, MW-8S, MW-8M, MW-12S, MW-14S, MW-16S, MW-16M

Wells to be sampled for metals, alkalinity, total organic carbon, and field parameters only (no VOCs, except as noted below for 2022) are:

July 2020 & April 2021:	MW-1SR, MW-2S, MW-2M, MW-7M, MW-9M, MW-10M, MW-11M, MW-15M, MW-17M, PZ-1, PZ-2, PZ-3, PZ-4
-------------------------	--

Wells to be sampled for VOCs, alkalinity, total organic carbon, and field parameters at 5-year intervals:

April 2022:	MW-2S, MW-2M, MW-7M, MW-9M, MW-11M, MW-15M, MW-17M, PZ-1, PZ-2, PZ-3, PZ-4
-------------	---

Samples for metals analysis shall be field filtered. Field natural attenuation parameters (ORP, dissolved oxygen, pH, specific conductance, and temperature) shall be measured using a down-hole instrument or a flow-through cell, in all monitoring wells from which VOC or metals samples are scheduled to be collected. Groundwater elevations are to be collected in all sampling rounds at the above listed wells.

Up to six private water supply wells shall be sampled during the October rounds of sampling for VOCs and metals only. The purpose of private water supply sampling is to assure protectiveness. Well construction and property owner information will be provided. The contractor will be responsible for access arrangements.

RE: Project: TOWN OF ONALASKA LANDFILL  
Pace Project No.: 40212257

Dear Steve Osesek:

Enclosed are the analytical results for sample(s) received by the laboratory on August 04, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska  
christopher.hyska@pacelabs.com

## QUALIFIERS

Project: TOWN OF ONALASKA LANDFILL

Pace Project No.: 40212257

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

RE: Project: ONALASKA LANDFILL  
Pace Project No.: 40217915

Dear Steve Osesek:

Enclosed are the analytical results for sample(s) received by the laboratory on November 06, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska  
christopher.hyska@pacelabs.com

## QUALIFIERS

Project: ONALASKA LANDFILL

Pace Project No.: 40217915

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
