**Subject: Documentation of Solid Waste Disposal Location and Compliance with the Conditions of Approval for the KEP Soil Remediation – AECOM Project 60482705**

Dear Mr. Volkert,

The City of Kenosha (City) is currently engaged in conducting remediation at the former Kenosha Engine Plant (KEP) located at 5555 30<sup>th</sup> Avenue, Kenosha Wisconsin. AECOM, on behalf of the City, is submitting this letter requesting approval of the proposed disposal location for solid waste generated at the KEP in general conformance with the requirements of the Ready for Reuse Loan Agreement Section VI, paragraphs 9 and 10. Additionally, AECOM is documenting compliance with WDNR's conditions attached to the approval of the KEP Soil Remediation Work Authorization letter dated September 16, 2016.

Samples for waste characterization were collected from representative planned remedial excavation locations and submitted for laboratory analysis. The results of the analyses were tabulated and bids were obtained from nearby landfills for disposal of the soil (and other debris) to be excavated and landfill as part of the remediation. The selected licensed landfill is Kestrel Hawk, located in Racine, Wisconsin. Contaminated soil, stained concrete and non-soil debris that may be encountered when excavating or grading the site will be sent to this landfill. The landfill will provide weight tickets for documentation of disposal. A summary of the weight tickets and quantity disposed by material type will be documented in a Remedial Action Documentation Report that will be prepared to document Group A excavations that will be conducted using the Ready for Reuse loan funds.

Backfill for these excavations will come from the on-site soil berms and a revised Soil and Materials Management Plan as well as a ch. NR 718.12(2) exemption request has been submitted under separate cover.

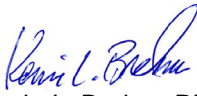

The costs associated with the remedial work conducted using these loan funds will be invoiced and tabulated separately from the remainder of the project for documentation of the expenditures associated with the loan.

The planned remedial excavations are anticipated to start mid- to late October or early November 2016. We appreciate your review and the approval of the selected disposal location.

Yours sincerely,

AECOM Technical Services, Inc.
