**SUBJECT:** Site Investigation Work Plan  
Hayward City Landfill Phase 2 PFAS Assessment  
Hayward City Landfill, USH 63 and Stress Road, Hayward  
BRRTS ID: 02-58-000380

Dear Mr. McCue,

The Wisconsin Department of Natural Resources (DNR) has completed a review of the August 27, 2021 Site Investigation Work Plan, Hayward Landfill Phase 2 PFAS Assessment (SIWP) submitted to the DNR on August 27, 2021. The SIWP was prepared by Short Elliott Hendrickson, Inc. (SEH). The DNR received the appropriate Wis. Adm. Code NR749 review fee on September 20, 2021.

The SIWP documents proposed activities associated with the perfluoroalkyl and polyfluoroalkyl substances (PFAS) assessment at the Hayward City Landfill. Based on the results of the initial groundwater sampling results from seven monitoring wells for PFAS collected on May 20, 2021, SEH is proposing the collection of fifteen groundwater samples from five monitoring well nests associated with the site.

The DNR concurs with the phased approach to the PFAS investigation and approves the completion of the groundwater monitoring as proposed in the SIWP. Based on the results of the groundwater monitoring proposed in the SIWP, the DNR may request additional site investigation.

The DNR appreciates the efforts you have taken to investigate PFAS at the landfill. Please contact me if you have any questions regarding this correspondence.

Sincerely,

John Sager  
Hydrogeologist  
Remediation and Redevelopment Program

C: Brian Kent, SEH  
Nathan Coller, DNR
