Dear Mr. Neitzel:

On behalf of Magellan Pipeline Company, L.P. (Magellan), WSP USA Inc. (WSP) is submitting a brief project status update for the Magellan Superior Station (Station). The Station is located near 2301 Winter Street (Figure 1). This letter includes an update on the operational status of the facility and the results of a recent groundwater sampling event.

The Station has been inactive since July 2018 as a result of the cessation of refinery operations at the Husky Energy Refinery. The Station has electrical power available; however, all piping, pumps and assets have been purged with nitrogen. The Station is anticipated to become active when the Husky Energy Refinery resumes operations, which may occur in Fall 2022.

In October 2020, Magellan submitted a closure request to the Wisconsin Department of Natural Resources (WDNR). During the review of the closure request, the WDNR expressed concern about the methyl tert-butyl ether (MTBE) concentrations reported in samples from two wells during late 2017 and 2018. WSP conducted a limited groundwater sampling event on November 30, 2020 to obtain current MTBE concentrations in groundwater.

**SYNOPSIS OF NOVEMBER 2020 GROUNDWATER MONITORING EVENT:**

On November 30, 2020, a WSP sampling technician measured fluid levels and collected groundwater samples from select wells for laboratory analysis. Fluid levels were measured in all wells except for side-gradient wells MW-05 and MW-08, which have been removed from the sampling network with the WDNR's approval. Instrumentation issues were encountered while gauging the water level at MW-02 so a fluid level for this well has not been included in the attached tables and figures. No sheen nor free product was observed in the wells. Historical fluid-level data are summarized on Table 1. A hydrograph (Figure 2) illustrates that the Station's groundwater elevation was at a historically high-level during October 2017. Following the October 2017 sampling event, groundwater fluid-level elevations decreased to

elevations within historical values. From the last sampling event in September 2018 to the November 2020 sampling event, the groundwater table elevation increased slightly. The groundwater flow direction has remained consistent with historical flow patterns. A groundwater elevation contour map derived from the November 2020 monitoring event is attached as Figure 3.

Groundwater samples were collected for petroleum volatile organic compounds (PVOC) analysis from monitoring wells MW-04, MW-06 and MW-07 during November 2020. The most recent PVOC analytical data are summarized on Table 2. The analytical report is included in Attachment A. Historical PVOC analytical data are summarized on Table 3. MTBE, toluene, total xylenes and naphthalene were not detected at concentrations above the Preventive Action Limits (PAL) in the groundwater samples collected during the November 2020 sampling event. The groundwater analytical data indicates that the reported benzene concentrations were either non-detect, trending downward, or stable with historical concentrations. A contour map depicting the post-remedial extent of PAL and Enforcement Standard (ES) exceedances is included as Figure 4. Benzene concentration trends are depicted on Figure 5. Ethylbenzene concentrations reported in samples from monitoring wells MW-4 and MW-6 were greater than the PAL but less than the ES and less than or similar to concentrations reported during 2018.

## SUMMARY AND PROPOSED PATH FORWARD:

The results of the November 2020 groundwater monitoring activities indicate the following:

- No observable free product or sheen was observed in the monitoring wells within the sampling program;
- The water table was within the historical range during the monitoring event;
- MTBE was not detected in the monitoring wells that were sampled;
- Recent concentrations of benzene, toluene, ethylbenzene, xylenes, trimethylbenzene and naphthalene are either non-detect, trending downward, or are stable with historical concentrations; and,
- The historical contaminants of concern are within a self-limiting plume with no off-site migration.

Based on the above findings, Magellan requests concurrence from the WDNR that the Case Closure submittal should be modified to include the recent data and resubmitted for the WDNR's consideration.

Kind regards,

Jennifer Shelton, P.E.  
Supervising Environmental Engineer

- a/ All measurements are in feet.
  - b/ Well depth is measured from the ground surface.
  - c/ TOC elevation is in feet above the National Geodetic Vertical Datum. Elevations for MW-2, MW-3 and MW-4 were re-surveyed in January 2009 after the top of the well casings were removed to accommodate the October 2008 excavation.
  - d/ The corrected water level elevation is calculated based on a free-phase hydrocarbon specific gravity of 0.79. *619.82* Italicized water level elevation is approximate (it is not corrected for product thickness).
- NM = not measured.  
FP = free product observed.  
-- = no product.

a/ Results are in micrograms per liter (ug/L)

PVOCS = Petroleum volatile organic compounds.

1,2,4-TMB = 1,2,4-Trimethylbenzene.

1,3,5-TMB = 1,3,5-Trimethylbenzene.

WAC NR 140 ES = Wisconsin Administrative Code Chapter NR 140, Enforcement Standards, revised February 2017.

WAC NR 140 PAL = Wisconsin Administrative Code Chapter NR 140, Preventive Action Limits, revised February 2017.

\* = Wisconsin NR 140 standards are for the combined concentration of 1,2,4- and 1,3,5- TMB.

< = Not detected above laboratory method detection limit.

**Bold** text indicates an exceedance of the WAC NR 140 ES.

*Italicized* text indicates an exceedance of the WAC NR 140 PAL.

PVOCs = Petroleum volatile organic compounds.

GRO = gasoline range organics.

DRO = diesel range organics.

TPH = total petroleum hydrocarbons.

1,2,4-TMB = 1,2,4-Trimethylbenzene.

1,3,5-TMB = 1,3,5-Trimethylbenzene.

WAC NR 140 ES = Wisconsin Administrative Code Chapter NR 140, Enforcement Standards, revised February 2017.

WAC NR 140 PAL = Wisconsin Administrative Code Chapter NR 140, Preventive Action Limits, revised February 2017.

\* = Wisconsin NR 140 standards are for the combined concentration of 1,2,4- and 1,3,5- TMB.

< = Not detected above laboratory method detection limit.

NA = constituent not analyzed.

J/Ja = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

RL1 = Reporting limit raised due to sample matrix effects.

P = The sample, as received, was not preserved in accordance to the referenced analytical method.

CF6 = Results confirmed by reanalysis.

\*\* = Sample collected at 16-20 feet.

\*\*\* = Sample was collected at 21-25 feet.

**Bold** text indicates an exceedance of the WAC NR 140 ES.

*Italicized* text indicates an exceedance of the WAC NR 140 PAL.

### Narrative

Job Narrative  
500-191751-1

### Comments

No additional comments.

### Receipt

The samples were received on 12/1/2020 10:15 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.2° C.

### Receipt Exceptions

A trip blank was submitted for analysis with these samples; however, it was not listed on the Chain of Custody (COC). Added to COC and logged in.

### GC/MS VOA

Method 8260B: The following samples were diluted due to the abundance of target and non-target analytes: MW-4 (500-191751-1) and MW-6 (500-191751-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received Trip Blank(s) not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
