FROM: Sarah Krueger

SUBJECT: Call Discussing Sump Discharge to Manitowoc Storm Sewer

At 2:30pm Bryan Hartsook (Wastewater Supervisor – SER), Trevor Nobile (RR – FOD), and Sarah Krueger (RR – PM NER) had a call to discuss a sump discharge from an off-site impacted property related to Susies Restaurant (Former) – WI DOT – LGU.

Krueger summarized the analytical data and discussions with wastewater staff within the region. The sump water is slightly above the NR 140 enforcement standard and discharges directly into the City of Manitowoc Storm Sewer which discharges to the Manitowoc River.

Hartsook indicated that Trevor Moen is currently working on a “Low Impact General Permit” which will be drafted in the next several months. The DNR may be able to apply the “Low Impact General Permit” to the sump discharge at the off-site impacted property. Wastewater would work with Remediation and Redevelopment when the permit is finalized.

Hartsook will update Moen on the discussion and sump discharge. RR may have additional documentation required, but Hartsook indicated he or Moen would contact Krueger with additional information.
