Reference No. 086165-07-13

Mr. Phil Richard  
Wisconsin Department of Natural Resources  
875 S 4<sup>th</sup> Avenue  
Park Falls, Wisconsin 54552

Dear Phil:

Re: **USEPA/WDNR Cooperative Agreement Remedial Design Work Plan**  
**Wetland Excavation and Surface Debris Mitigation**  
**Penta Wood Products Superfund Site**  
**Siren, Wisconsin**

## **1. Introduction**

GHD Services Inc. (GHD) has prepared this letter presenting a remedial design plan intended to be included with a cooperative agreement between the Wisconsin Department of Natural Resources (WDNR) and United States Environmental Protection Agency (USEPA) for wetland excavation and surface debris mitigation at the Penta Wood Products Superfund Site (Site) located in Siren, Wisconsin. The Site location is shown on Figure 1.1, and the Site plan is shown on Figure 1.2.

### **1.1 Remedial Design Work Plan Outcomes and Objectives**

The objectives of this remedial design work plan are to identify the design components necessary to conduct the following remedial actions:

- Excavating and removing impacted soil and sediment from the wetland at properties located adjacent to the Site and placing this impacted material within an expanded corrective action management unit (CAMU) on the Site property
- Mitigating and covering impacted surface debris in place with clean borrow soil at the Site.

This remedial design work plan includes the following:

- Project background
- Remedial design investigation
- Remedial design
- Cost estimate
- Schedule

## **2. Project Background**

### **2.1 Background**

The Site is an inactive wood-treating facility located on Daniels 70 (former State Route 70) in Burnett County, Wisconsin. It is located approximately 78 miles northeast of Minneapolis, Minnesota, and 60 miles south of Duluth, Minnesota (Figure 1.1). The Village of Siren, Wisconsin, is approximately 2 miles east of the Site. The Site plan is shown on Figure 1.2.

The Site property currently consists of approximately 82 acres that were actively used for wood-treating activities. Forty undeveloped, forested acres were sold after the facility closed. The property is located in a rural agricultural and residential setting and is bordered to the east, west, and north by forested areas. Some of these areas are classified by the State of Wisconsin as wetlands. With the exception of an 8-acre parcel, Daniels 70 forms the southern property boundary.

The Site is situated on a hill with an 110-foot drop in elevation from the southern boundary to the northern boundary. The Site stratigraphy consists of three layers: an upper sand layer, a silt and clay layer that is not continuous throughout the Site, and a lower sand layer. The depth to groundwater is typically 100 feet or more from the ground surface. Groundwater occurs both in a thin, unconfined aquifer, and within the semi-confined aquifer. The regional groundwater flow direction is to the north, although local groundwater flows radially away from the Site.

A number of surface water bodies are present north and east of the Site. Doctor Lake and an unnamed lake are located 2,000 feet east and northeast of the Site, respectively. Approximately 2,140 acres of lakes, 94 acres of bogs, and 7,500 acres of wetland are located within a 4-mile radius of the Site. A wetland is located within 130 feet of the northern property boundary.

### **2.2 Previous Remedial Actions**

In September 1998, the ROD was finalized specifying remedies to address contamination associated with soil and sediment, surface water, LNAPL and groundwater. The following are the specific remedial action objectives:

- Reduce or eliminate the potential risk to human health and ecological receptors associated with exposure to pentachlorophenol (PCP) and fuel oil components in surface water and groundwater, and PCP/fuel oil components and metals in the soil and sediment.
- Reduce or control the source of contaminants.
- Meet the ARARs, including reducing contaminant concentrations in the groundwater beneath the Site to below WDNR's Preventive Action Limits.
- The remedial action for the contaminated soil was completed in 2000 and included the construction and consolidation of material into an onsite CAMU. The remedial action to address LNAPL and contaminated groundwater is ongoing and includes the following:
  - Groundwater extraction and treatment
  - LNAPL recovery

- Bioventing
- Monitored natural attenuation

A remediation system operated continuously from March 2004 through November 2015.

The performance goals for the extraction and treatment system were as follows:

- Remove LNAPL, to the extent practicable, to reduce a source of PCP to the groundwater.
- Extract and treat the most concentrated portions (exceeding 1,000 µg/L) of PCP in the groundwater, and reduce concentrations to a level that allows natural attenuation to achieve the NR 140 standards in a reasonable period of time.
- Lower the water table, to the extent practicable, to allow bioventing to promote natural degradation of the residual diesel fuel petroleum hydrocarbons and PCP in the LNAPL smear zone.
- Comply with discharge standards.

As of November 2015, the groundwater extraction and biovent systems ceased operations and were decommissioned to initiate the remediation system shutdown pilot study as conditionally approved by the USEPA in a letter dated November 17, 2015.

During 1999 and 2000, soil excavation work and associated sampling was conducted by CH2M HILL on behalf of the USEPA. As documented in the Remedial Action Report (December 2000, CH2M HILL), the Area 29 wetland excavation was completed and confirmation soil samples were collected. However, following sample collection, a storm washed impacted material back into the wetland. The material was re-excavated, but confirmation samples were not collected. The impacted portion of the wetland is located on two separate parcels located adjacent to the Penta Wood Site as shown on Figures 2.1, 2.2, and 2.3. Parcels are identified on Figure 1.2. The former wetland excavation location is shown on Figure 2.3.

As of September 1, 2014, the WDNR assumed responsibility from the USEPA for continuing the remedial action at the Penta Wood Products Superfund Site. WDNR retained GHD to conduct the remedial action. WDNR directed GHD to collect soil/sediment samples from the Area 29 wetland to confirm the results of the previous USEPA sampling and delineate the extent of the impacted area.

A total of 39 soil samples were collected in 2017 from 15 soil boring locations. Samples were collected from the borings at depths ranging from the ground surface to 6 feet below the ground surface.

The samples were submitted for laboratory analysis of PCP. The soil sample locations are shown on Figures 2.2 and 2.3. Soil sample results are summarized in Table 2.1.

PCP was detected above the USEPA criteria of 900 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ) in eight of the soil samples. These soil sample results were generally consistent with the results previously reported by USEPA. However, a statistical evaluation of these results indicates that the soil/sediment within the sampling area requires additional measures to meet the cleanup objectives for the Site and surrounding properties.

During Site walks by GHD, surface debris was observed in three areas. One of the areas is located west-southwest of well MW7. In this area, a sawdust like material was observed. A second area of surface

debris consisting primarily of treated wood is located north of wells MW17 and MW16. A third area included a small amount of drum debris west of well MW8. The surface debris locations are shown on Figures 2.1 and 2.4. Samples were collected from the surface debris and submitted for laboratory analysis of volatile organic compounds (VOC), semivolatile organic compounds (SVOC), metals, PAHs, and PCP. Surface debris sample results are summarized in Table 2.2.

Analysis of the debris samples show detections above Residual Contaminant Levels (RCLs) for Arsenic, PCP, and other SVOCs for direct contact and groundwater protection. Subsequent soil sampling under the surface debris confirmed that contamination levels meet the groundwater protection RCLs.

A Cooperative Agreement Work Plan for Wetland Excavation and Surface Debris Mitigation was submitted in July 2019.

### **3. Remedial Design Investigation**

Remedial design investigations were performed to identify an onsite soil borrow source area to cover soil/sediment to be excavated from the wetland and placed adjacent to the CAMU and to cover impacted surface debris.

A total of 10 soil samples were collected on October 29, 2018 to determine the suitability of the potential soil borrow area for use cover soil. The samples were submitted to an independent laboratory, TestAmerica Laboratories, Inc. of University Park, Illinois for analysis. The results show that the soil borrow area is suitable for use as fill for work to be conducted at the site. The proposed soil borrow area location and sample locations are shown on Figures 2.2 and 2.4 and associated sample results are summarized in Table 3.1. The laboratory report is included in Attachment A. Additional remedial design investigation work is not necessary.

### **4. Remedial Design**

WDNR expects to retain GHD to complete the remedial design. Remedial design activities involve preparing construction drawings, specifications, bid documents and supporting calculations for the various components of the remedial action. The plan is to submit preliminary (30-percent), pre-final (95-percent), and final (100-percent) design documents for USEPA review. USEPA's comments would be incorporated into each subsequent design document. WDNR would only seek formal USEPA approval on the final design document before requesting bids to construct the remedial action.

#### **4.1 Preliminary Design Report**

The WDNR will submit a Preliminary Design Report (30-percent completion) that will include the following:

- Preliminary draft construction drawings and specifications to outline key portions of the project, including quantity calculations
- Design assumptions, parameters, and restrictions

- Proposed wetland excavation confirmation sampling plan to confirm remaining soil/sediment in the excavation meets applicable criteria
- Outline of required supporting drawings and specifications
- Proposed siting/locations of processes/construction activity
- Expected long-term monitoring and maintenance requirements
- Adjacent property access agreements and requirements
- List of required permits
- Preliminary remedial action cost estimate
- Preliminary remedial action schedule

#### **4.2 Pre-Final Design Report**

The Wisconsin DNR will submit a Pre-Final Design Report (95-percent completion) representing a design effort that is 100-percent complete. The Pre-Final Design Report will address all USEPA comments made on the Preliminary Design Report and will include the following:

- Draft construction design plans and drawings
- Draft construction specifications
- Permitting requirements
- Draft confirmation wetland excavation sampling plan
- Adjacent property access agreements and requirements
- Draft remedial action Health and Safety Plan (HASP)
- Draft remedial action cost estimate
- Draft remedial action schedule

#### **4.3 Final Design Report**

The WDNR will submit a Final Design Report (100-percent completion) that will address all comments made to the preceding design submittals and include reproducible drawings and specifications suitable for bidding. The Final Design Report will include the final Remedial Design elements including:

- Final construction design plans, drawings, specifications, and permitting requirements
- Final confirmation wetland excavation sampling plan
- Adjacent property access agreements and requirements
- Final HASP
- Final remedial action cost estimate
- Final remedial action schedule

## **5. Cost Estimate**

Currently, WDNR lacks funding necessary to complete the scope of work discussed above. The estimated cost to complete the wetland excavation is \$776,462, and the estimated cost to complete the surface debris mitigation is \$337,815. The total estimated cost is \$1,114,277, which includes remedial design costs of approximately \$50,000.

The work has not been formally bid. Should contractor bids or differing Site conditions indicate that total project costs would exceed the estimated costs, WDNR would notify USEPA before proceeding with the work.

## **6. Schedule**

### **6.1 Wetland Excavation**

The soonest that the wetland excavation could be performed is during the winter of 2021. This would require that erosion control measures be installed during the fall of 2020. Grading and covering the excavated wetland soil and sediments would then occur in spring of 2021 followed by vegetation establishment during the summer of 2021. To achieve this schedule the remedial design would require completion and approval during the summer of 2020.

### **6.2 Surface Debris Mitigation**

The soonest that the surface debris mitigation could be performed is the fall of 2020 with subsequent vegetation establishment during the spring/summer of 2021. To achieve this schedule the remedial design would require completion and approval during the summer of 2020.

Please contact us if you have any questions.

Sincerely,

GHD

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Job ID: 500-153999-1

Laboratory: TestAmerica Chicago

### Narrative

#### Job Narrative 500-153999-1

### Receipt

The samples were received on 10/30/2018 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1° C.

### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### GC Semi VOA

Method(s) 8151A: Surrogate and spike recoveries for the following LCS was below the control limits: (LCS 500-458929/2-A). Re-extraction was performed outside of holding time with acceptable results. The re-extracted analyses were non detect. The original results have been reported due to the holding time constraints.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
J	Reported value was between the limit of detection and the limit of quantitation.

### GC/MS Semi VOA

Qualifier	Qualifier Description
J	Reported value was between the limit of detection and the limit of quantitation.

### GC Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
X	Surrogate is outside control limits
J	Reported value was between the limit of detection and the limit of quantitation.

## Metals

Qualifier	Qualifier Description
J	Reported value was between the limit of detection and the limit of quantitation.

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Accreditation/Certification Summary

Client: GHD Services Inc.  
Project/Site: Penta Wood 086165

TestAmerica Job ID: 500-153999-1

## Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
Wisconsin	State Program	5	999580010	08-31-19

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
