RE: Site Investigation Report for Redi-Quick Cleaners Site, 9508 West Greenfield Avenue, West Allis, Wisconsin dated July 2001.

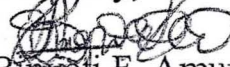

Dear Mr. Gruichich:

The Remediation and Redevelopment Section of the Wisconsin Department of Natural Resources (WDNR) Southeast Region has reviewed the above referenced report.

WDNR recommends installing at a minimum two Piezometers to adequately define the vertical migration of the contaminants on this site. The Piezometers should be positioned in the source area and the most downgradient area/location of the site. We also recommend sampling for parameters that have not been sampled for with reference to the site history and usage which reveals fuel oil, waste oil and gasoline underground storage tanks. In other words, analytical parameters should not be limited to only VOCs except if some initial sampling must have eliminated other parameters. Sampling should also be geared towards the evaluation of any possible off-site contaminant migration.

If you have any questions concerning this letter, please feel free to contact me at (414)263-8607.

Sincerely,

Binyoti F. Amungwafor.
Hydrogeologist
