Milwaukee, WI 53212-0436

Dear John:

This letter is to confirm in writing the justification for leaving two private wells out of the Lime Kiln Landfill monitoring plan that were originally listed in Chad Czarkowski's October 28, 1997, correspondence to Darrell Hofland. Though discussed on various occasions over the phone and in person, it has not been documented that the WDNR and the Village have come to agreement that the wells along Green Bay Road will not be sampled at the expense of the Village. We believe that the Village has shown that the contamination problems along Green Bay Road are not due to the Lime Kiln Landfill, and that the WDNR has agreed with that conclusion.

Telephone

Chad's letter requests that the Village annually sample four private wells that are deemed by Chad to be the "first affected if contamination spreads." The wells are as follows:

920.458.8711

Facsimile

1. Ann Hazelwood, 675 Green Bay Road
2. Harold Keefe, 612 Green Bay Road
3. George Watts, 1716 Lakefield Road
4. Stephan Stockwell, 717 Heather Court

920.458.0537

No sampling will be conducted at the expense of the Village at 675 Green Bay Road or 612 Green Bay Road. It would be our recommendation that wells at those residences have at least annual monitoring, at the expense of those responsible for the groundwater contamination.

The Village has agreed to continue sampling at 1716 Lakefield Road, and 717 Heather Court. The Village is performing semi-annual sampling at both locations to protect the residents against potential contaminant migration associated with the Lime Kiln Park. To date, no compounds have been detected at 717 Heather Court. One compound that is not associated with Lime Kiln Park, chloroform, has been detected at 1716 Lakefield Road below safe drinking water standards.

Please contact me if you have any questions or further discussion on this issue.

Sincerely,

B.J. Le Roy
Project Geologist
