Subject: Site Investigation Workplan - Addendum  
WDNR BRRTS Activities #02-46-549906 & #02-46-000743  
Grafton Lime Kiln Park (West Plume) and Lime Kiln Park Grafton Village, Grafton, WI

Dear John Feeney:

TRC Environmental Corporation (TRC), on behalf of the Village of Grafton, has enclosed an addendum to the Wis. Admin. Code § NR 716 Site Investigation Workplan for the contamination associated with BRRTS Activities #02-46-549906 & #02-46-000743. This addendum has been prepared in response to your March 2, 2022, letter, and the associated call on March 22, 2022.

The attached Table 1 provides a summary of WDNR comments and associated responses/actions, as well as a discussion of the other included attachments. As discussed on the March 22, 2022, call, due to the Village's limited 2022 budget and the prioritization of assessing vapor risk at the 2076 First Ave. property and the Lime Kiln Park Zaun Pavilion (as described in the December 2021 SIWP), the Village will forego conducting the second semiannual routine groundwater sampling event in 2022. The Q1 2022 routine sampling event was conducted March 15-18, 2022, and results were similar to recent/historic concentrations. Laboratory results are included in Attachment 1 and Table 2, and groundwater elevations are included in Table 3.

If you have any questions as you complete your review, please feel free to contact me at (608) 572-3845 or [aenright@trccompanies.com](mailto:aenright@trccompanies.com).

Sincerely,

TRC

Alia Enright, PE  
Project Manager

Stephen Sellwood, PG  
Senior Hydrogeologist

cc: Amber Thomas – Village of Grafton (pdf via email)

Lime Kiln Park and West Plume

Grafton, Ozaukee County, Wisconsin

May 18, 2021, WDNR Letter			
Letter Category	Task #	Previous WDNR Comment	Previous Response/Action
Comprehensive Site Investigation Report	1	Add most recent data available for no sample (NS) locations on maps	Refer to <b>Figures 4.A, 5.A, and 6.A</b> . Added most recent historic data to existing maps and adjusted contours as needed.
	2	Include all historic results, including private water supply well data, in the groundwater tables	Refer to <b>Table 2</b> for historic groundwater data results.
	3	Submit separate iso-concentration maps with historic data and current data on separate maps so a comparison can be made	Refer to <b>Figures 4.B, 5.B, and 6.B</b> . These historical maps were created using the maximum observed concentration at each well from the beginning of monitoring through 2004. For most well/parameter pairs the maximum concentration occurred prior to the end of 2004.
	4	Submit updated and multiple cross sections on contaminant plume centerlines and on lines perpendicular to plume centerlines	Refer to <b>Figures 7 - 9</b> . Created 3 cross sections (2 centerlines, 1 transecting where plumes merge) showing isoconcentrations.
	5	Outline and highlight relevant homes and businesses on the maps	Refer to <b>Figure 11</b> showing relevant homes and businesses.
	6	Include PAL iso-concentration lines on maps	Add to existing maps, as needed. Refer to <b>Figures 4.A - 6.B</b> .
	7	Provide the Phase I ESA for the Milwaukee Sign location (2076 First Avenue)	Three relevant reports were provided by the 2076 First Avenue property owner and are included in <b>Appendix B</b> : 1. 1995 Level I Environmental Assessment 2. 1996 Underground Storage Tank Removal Assessment 3. 2002 Phase I Environmental Site Assessment Report
	8	*If Phase I ESA was not previously done for that property, perform a Phase I ESA	Not applicable - Phase I ESA previously done for property.
Monitored Natural Attenuation (MNA) Sampling Plan	9	Add PW664GB into the sampling program (perimeter side gradient sentry well on west side)	PW664GB cannot be added to the sampling program because it was abandoned in 1998. Refer to <b>Appendix E</b> .
	10	Add P6B, P5B, and P1 (A-C) back into the sampling program (plume centerline wells)	P5B and P6B were sampled during the Q3 2021 groundwater monitoring event. Concentrations at these wells were very similar to their most recent sampling event.  P-1A does not exist; the well location consists of P-1B through P-1D. TRC attempted to sample P-1B/C/D during Q3 2021 sampling. However, the Waterloo multiport wiring was frayed/disconnected. TRC contacted the manufacturer and determined the repairs needed and intend to make these repairs and sample this well during the next sampling event (Q1 2022).
	11	Conduct sampling semi-annually for 2 years	2021 semiannual sampling occurred March 29-31 (Q1) and September 14-17 (Q3). 2022 semiannual sampling will be conducted in Q1 and Q3.
	12	Compare MNA sampling plan to EPA/600/R-04/027, April 2004 and DNR RR669, and adjust plan if needed	Wells sampled in Q3 2021 (standard monitoring wells plus P5B and P6B) were analyzed for MNA parameters (field DO, field ORP, dissolved iron, dissolved manganese, sulfate, and nitrate+nitrite). The sampling program includes analyzing wells for these parameters on an annual basis going forward. Refer to <b>Table 5</b> .
Vapor Screening	13	Another attempt should be made to install a Wis. Admin. Code ch. NR 141 compliant water table well(s) to screen the homes on Manchester Drive	Based on the conceptual site model of shallow groundwater flow, additional vapor investigation along Manchester Drive is not warranted. Refer to <b>Section 4.1.4</b> .
	14	Consider historic results from the private water supply wells in the screening analysis	As above.
	15	Investigate shallow ground water (well screened across or near the water table) at 2076 First Avenue (Milwaukee Sign) to screen businesses in that area for vapor intrusion risk	Proposed site investigation activities at 2076 First Avenue (Milwaukee Sign) property are included within various sections/attachments of the Site Investigation Workplan.
Emerging Contaminants	16	Provide an emerging contaminants evaluation including 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS)	Refer to <b>Section 4.1.6</b> for an emerging contaminants evaluation. Propose PFAS and 1,4-dioxane sampling at 3 wells (1 at each source area and one at the plume convergence).
Other WDNR Comments	17	Submit the laboratory reports for AECOM's Site Investigation and Preliminary Remedial Action Identification, March 3, 2017 report (Appendix E)	Refer to <b>Appendix C</b> .
Schedule	18	Submit a site investigation workplan to complete the work described above by July 23, 2021	Refer to various components of Site Investigation Workplan. Schedule extension granted by WDNR PM John Feeney through email.
	19	Submit a comprehensive site investigation report within 60 days of completing additional site investigation activities (include vapor screening and DNR fee)	Future submittal pending proposed work tasks above.

Table 1 - Summary of WDNR Comments and Associated Responses/Actions

BRRTS #02-46-549906 and #02-46-000743

Lime Kiln Park and West Plume

Grafton, Ozaukee County, Wisconsin

March 2, 2022, WDNR Letter			
Letter Category	Task #	WDNR Comment	Response/Action
Evaluation of Receptors	1	Submit a current evaluation of existing nearby private water supply wells and municipal wells as potential receptors.	Refer to responses/actions to items 2 through 4 below.
	2	If possible, collect current samples from private water supply wells, in particular a) the wells west of PW668GB and PW664GB shown on Figure 2 in the 1999 site investigation report, b) private well PW812GB, and c) the private water supply well just west of the pond, directly east of the landfill. These wells would be useful to delineate the contaminant plumes, demonstrate the contaminant plumes have not expanded, and justify the MNA network.	As shown on <b>Figure 6</b> , a screening of private wells in the vicinity of the site was conducted, and based on this screening, a select number of private wells appear to remain or potentially remain. Pending access approval from these property owners, these private wells (if present) are proposed to be sampled once (pending results) in accordance with the procedures outlined in the December 2021 SIWP.
	3	Submit a historic groundwater data table and map for all private water supply well sample results for those wells not in the MNA network and not included in the Report's historic groundwater data table. These wells were indicated by unlabeled circles on Figure 2 in the 1999 site investigation report.	Initial historical private well sampling was conducted by WDNR and/or USEPA prior to Village's involvement. In the December 2021 SIWP Table 2, TRC submitted all data available in Village's database. A filtered version of this Excel table with only the data from non-MNA network private wells is included here as <b>Table 4</b> .
	4	Discuss if contamination from this site is impacting municipal wells. If so, include the municipal wells as potential receptors and use historic data to delineate the groundwater plumes.	Refer to <b>Attachment 2</b> for Grafton Municipal Well Assessment.
	5	Discuss if the pond east of Lime Kiln Park is affecting groundwater flow and whether this pond is a receptor of groundwater contamination.	Refer to <b>Attachment 3</b> for Hydrogeology of the Manchester Drive Area. Also refer to map view <b>Figure 2</b> and cross section <b>Figures 3, 4, &amp; 5</b> .
	6	The DNR's current understanding of site conditions suggests that the Manchester Drive homes cannot be screened out from the vapor intrusion pathway by concluding that the contaminant plumes dive under clean water since (a) only one nested water table well and piezometer exist near the river, (b) Table 4 of the Report indicates an upward gradient between piezometers MW8A and P8B in Q3 of 2021, and (c) it is unclear if the staff gauge in the river has been used to measure river water elevations recently, as recent data are not presented in Table 4 of the Report. Since TRC will be mobilizing equipment capable of drilling through bedrock for drilling at the 2076 1st Avenue location, the DNR suggests that a water table well be constructed near MW-08A that reliably produces water to screen the homes on Manchester Drive.	The CSM with respect to vapor intrusion risk along Manchester Drive was addressed in the December 2021 SIWP, and supplemental information is included in <b>Attachment 3 - Hydrogeology of the Manchester Drive Area</b> . Groundwater impacts east of the Milwaukee River are at depth, not at the water table. Per RR 800, properties overlying CVOC impacts at the water table present a potential vapor risk. However, properties along Manchester Drive cannot overlie water table impacts from the Lime Kiln Park landfill based on the hydrogeologic conditions present.  The December 2021 SIWP proposed paired sub-slab and indoor air vapor sampling at the Zaun Pavilion (structure on the Lime Kiln Park property). This sampling will be conducted as proposed in the SIWP to assess vapor risk from water table impacts west of the Milwaukee River.
Conceptual Site Model	1	Due to the complexity of the site and the severity of the actual or potential contamination, the DNR request the development of a CSM to include both written and graphical work products to portray and interpret both known and potential site information. The "known" information typically includes historic and/or reported contamination sources, evidence of a hazardous substance discharge or environmental pollution, and past sampling data. The "potential" information should include migration pathways to explain how the contamination traveled away from the source area and receptors of contamination to identify what could be affected by the contamination. As more data and information is collected, the CSM is updated to serve as a current framework and representation of the site.	The current CSM reflects the current knowledge and understanding at the site. As additional investigation is completed, the CSM will be updated to reflect new knowledge.
	2	The CSM should include cross-sections that incorporate sample results, contaminant plumes, flow data geophysical logs and/or other hydrologic data, surface features, and receptors, including municipal wells, capture zones, private water supply wells, homes and buildings with basements and below grade features (e.g., sumps), and sub-surface utilities.	Supplemental visuals and discussion to support the current CSM are included as attachments to this addendum. The current CSM reflects the current knowledge and understanding at the site. As additional investigation is completed, the CSM will be updated to reflect new knowledge.
	3	Include an additional cross-section from Milwaukee Sign to Green Bay Road to include homes on Green Bay Road.	Additional cross sections will be developed as needed to update the CSM as the investigation of the Milwaukee Sign Property progresses. The next step in assessing the potential for vapor intrusion along Green Bay Road is to conduct sampling to evaluate West Plume source area. As discussed with WDNR on the 3/22/22 call regarding prioritizing field activities, next steps include paired sub-slab and indoor air sampling at the 2076 First Avenue property, as outlined in the December 2021 SIWP.
Other DNR Comments	1	The Report describes construction of one small diameter 1-inch monitoring well inside the 2076 1st Avenue building and includes a request for DNR approval for use of this small diameter well. The DNR approves this requested variance to the monitoring well construction and understands that the well will be constructed to meet all the Wis. Admin. Code NR 141 requirements, except the well will have a one-inch diameter. This letter serves as the exemption.	No action required.
Schedule	1	The DNR requests that you submit a Site Investigation Work Plan Addendum to the Report to address the above comments by April 22, 2022 for DNR review.	This addendum addresses this item.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 500-213937-1

**Job ID: 500-213937-1**

**Laboratory: Eurofins Chicago**

## Narrative

**Job Narrative  
500-213937-1**

## Comments

No additional comments.

## Receipt

The samples were received on 3/19/2022 11:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.1° C.

## Receipt Exceptions

One or more containers for the following samples were received broken or leaking: PW1530LR (500-213937-19) and PW461HR (500-213937-21). One vial from samples -19 and -21 were broken.

The following sample was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): P05B DUP (500-213937-23)  
Sample P05 Dup was added by EETA.

Sample times were taken off the container labels for samples -13, -14, -17, -18, -19, -20 and -21.

## GC/MS VOA

Method 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: P02B (500-213937-4). Elevated reporting limits (RLs) are provided.

Method 8260B: The matrix spike duplicate (MSD) for the following sample was analyzed outside the 12 hour tune window. No further action was taken.P05B (500-213937-7)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.1
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	Containers recd broken. Sufficient sample in remaining containers for analysis.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

### **Grafton Municipal Well Assessment**

In correspondence dated March 2, 2022, the Wisconsin Department of Natural Resources (WDNR) requested an assessment of whether contamination from the Lime Kiln Park Landfill or the former Milwaukee Sign Property at 2076 First Ave. (MSP, a potential source of the groundwater contamination referred to as the West Plume) could be impacting municipal wells. The Village of Grafton has six current municipal water supply wells (Wells 2 through 7) and one previous well that was permanently abandoned around 1999 (Well 1). The wells extract groundwater from the Niagara Dolomite above the Maquoketa Shale. The wells have similar construction with casing extending at least 20 feet into bedrock and open bedrock borehole to depths of approximately 500 feet and 600 feet below ground surface (bgs). Approximate distances between the Grafton municipal water supply wells and Lime Kiln Park and the former MSP are:

<b>Well</b>	<b>Lime Kiln Park Landfill</b>	<b>Former MSP (2076 First Ave.)</b>
Well 1 (abandoned)	1.2 miles	1.3 miles
Well 2	1,800 feet	2,900 feet
Well 3	1.4 miles	1.7 miles
Well 4	2.0 miles	2.1 miles
Well 5	4,900 feet	4,000 feet
Well 6	2,100 feet	400 feet
Well 7	4,400 feet	1.3 miles

Based on a review of municipal well sampling data downloaded from the WDNR Groundwater Retrieval Network (GRN), chlorinated volatile organic compounds (CVOCs) have been detected in five of the Village's seven wells, with only Wells 3 and 7 generally free of CVOCs. Wells 3 and 7 are on the east side of Grafton and are the only two municipal wells on the east side of the Milwaukee River.

Of the five Grafton municipal wells with CVOC contamination, Wells 1, 4, and 5 are not potential receptors of contamination from the Lime Kiln Park Landfill or the former MSP due to the significant distances between these wells and the two sites. Well 1, located more than a mile from Lime Kiln Park and the former MSP, had the highest CVOC concentrations, indicating that there are other, more significant sources of CVOC groundwater contamination in Grafton.

Well 2 is located approximately 1,800 feet north of Lime Kiln Park. The CVOCs detected most often at Well 2 are tetrachloroethene (PCE) and trichloroethene (TCE). PCE has been detected at Well 2 during 101 sampling events between 1984 and 2019 at concentrations ranging from 0.16 ug/L to 5.5 ug/L (Well 2 is currently out of service). PCE has never been detected in P2B or P8B, the two highest-concentration groundwater monitoring wells associated with the Lime Kiln Park Landfill groundwater plume. The persistent presence of PCE at Well 2 and the consistent absence of PCE in the Lime Kiln Park Landfill groundwater plume indicate that the Lime Kiln Park Landfill is not the source of CVOCs detected at Well 2. PCE has also never been detected in the monitoring wells associated solely with the West Plume (P1B, P1C, P1D, P5B, P6B, and P10B). As a result, the West Plume is also not the source of CVOCs detected at Well 2.

Trichlorotrifluoroethane (Freon 113) is present in monitoring wells associated with the West Plume and therefore has been identified as a marker of the West Plume. Freon 113 has not been detected at Well 2, further supporting the conclusion that Well 2 is not a receptor of contaminants from the West Plume.

Well 6 is located approximately 400 feet north of the former MSP. Freon 113 has been frequently detected at Well 6, suggesting that Well 6 may be impacted by contaminants from the West Plume. However, Freon 113 is also frequently detected in Well 4 and Well 5. Frequent detections of Freon 113 in multiple municipal wells separated by miles indicates that Freon 113 is regionally present in the aquifer. The Freon 113 detected at Well 6 may be from a regional source rather than from the West Plume. The West Plume may itself be associated with a regional source rather than sourced from the former MSP. Further investigation of groundwater conditions at the former MSP as proposed in the 2021 Work Plan will help identify the source of contamination for the West Plume and Well 6.

## **Attachment 3**

### **Hydrogeology of the Manchester Drive Area**

In correspondence dated March 2, 2022, the Wisconsin Department of Natural Resources (WDNR) requested additional information about the pond east of Lime Kiln Park (i.e., Manchester Pond). The pond area is shown as a wetland on the United States Geological Survey (USGS) topographical map for the area (Cedarburg, Wis.), indicating that the water table was present at the ground surface at this location at the time the original topographic map was published (Figure 1). The first version of this topographic map was published in 1959, prior to the development of Manchester Drive. The wetland lies below the 730 feet above mean sea level (amsl) elevation contour, indicating that the water table elevation in this area in the 1950s was between 720 feet and 730 feet amsl.

In an aerial image dated March 2000 available through Google Earth, Manchester Pond is clearly visible as a pond rather than a wetland. In the early 2000s an engineered outlet structure was added at the east end of the pond to lower the pond elevation. The outlet drains to the Village of Grafton's storm sewer system and has an invert elevation of 725 feet amsl; thus, the pond is maintained at an elevation of approximately 725 feet amsl.

The elevation of the Milwaukee River adjacent to Lime Kiln Park was reported in the January 1999 Site Investigation and Preliminary Remedial Action Identification report as 697.7 feet amsl based on a staff gauge reading (Earth Tech, 1999). This measurement is consistent with the USGS topographic map which shows the river at an elevation of 700 feet amsl near Lime Kiln Park. To check the validity of the river elevations on the USGS topographic map, the map river elevation was compared to the measured river elevation at a staff gauge located downriver from the site. The USGS maintains a staff gauge (USGS 04086600) on the Milwaukee River approximately 2 miles south of Lime Kiln Park. During the last two years (April 2020 to April 2022), staff gauge elevations during baseflow periods have predominantly been between elevations of 659 feet and 660 feet amsl. The USGS topographic map shows the 660 feet amsl contour crossing the river just upstream from the staff gauge location, confirming that the river elevations on the USGS topographic map are reasonable approximations of actual river elevations.

Because the Milwaukee River elevation near Lime Kiln Park is approximately 700 feet amsl and Manchester Pond is maintained at an elevation of 725 feet AMSL, the pond is hydraulically upgradient of the river and upgradient of the contaminant plume originating at Lime Kiln Park. As a result, Manchester Pond cannot be a receptor of groundwater contamination from the Lime Kiln Park site. In addition, because the pond is elevated above the river, the water table in the Manchester Drive area slopes away from the pond toward the river. A water table map for the area based on the Manchester Pond elevation and Milwaukee River and Cedar Creek elevations from the USGS topographic map is shown on Figure 2. The approximate water table is also depicted in cross section on Figures 3, 4, and 5.

This water table map and groundwater flow pattern indicate that groundwater present at the water table below Manchester Drive originates from the pond or areas further upgradient from Manchester Drive on the east side of the river. As a result of this groundwater flow pattern, contaminants originating at Lime Kiln Park, or anywhere on the west side of the Milwaukee River, cannot be present at the water table below Manchester Drive. Because contaminants originating across the river cannot be present at the water table in the Manchester Drive area, there is no vapor intrusion risk in the Manchester Drive area from the Lime Kiln Park and West Plumes.
