**Subject: July Through December 2009 Semiannual Status Report**  
**Monitored Natural Attenuation Demonstration**  
**Tecumseh Products Company, Grafton, Wisconsin**  
**WDNR FID #24009170, BRRTS #02-46000751**

Dear Mr. Feeney:

Monitored natural attenuation (MNA) is ongoing at the Tecumseh Products Company (Tecumseh) in Grafton, Wisconsin. In December 2007, RMT, Inc. (RMT), on behalf of Tecumseh, submitted an MNA Demonstration Workplan to the Wisconsin Department of Natural Resources (WDNR), which outlined four rounds of semiannual monitoring to be completed at the site. The WDNR approved this plan in a letter dated March 5, 2008. The first three rounds of sampling have been completed and reported to the WDNR. The purpose of this letter is to document the fourth, and final, monitoring event that was completed in October 2009, and to respond to each of the conditions listed by the WDNR in the March 2008 approval letter.

### **Status of Additional Activities**

Within the WDNR's conceptual approval of the MNA Workplan, the WDNR specified additional items that must be addressed at the site in preparation for a future request for closure. These items and the status of work on the items are as follows:

1. *Submit maps of where residual soil and groundwater contamination is located.*

This will be done as part of a formal closure request.

2. *Complete additional investigation of the groundwater to the east of the plant near the Heiser well, and assess the vapor intrusion risk associated with the downgradient plume.*

These items were completed last year, and were summarized in the January 8, 2009 Status Letter.

**3. Determine if other water supply wells are in the area near the plume**

This item was complete, and the results were summarized in the August, 25 2009 Status Letter.

**4. Conduct a vapor intrusion assessment of the Tecumseh building**

Tecumseh completed as subslab vapor investigation of the facility in September 2009, and the results were submitted to the WDNR in a report dated November 17, 2009. A small area within the facility was found to contain subslab vapor concentrations of 1,1,1-trichloroethane (TCA) and its daughter products that pose a potential vapor intrusion risk. RMT has prepared a workplan to mitigate the vapor intrusion risk, and this workplan is being submitted to the WDNR under separate cover, concurrent with this report.

**5. All institutional controls for the site should be in place prior to the start of the MNA program.**

This item is complete.

## **Semiannual Monitoring**

### **Sampling Method**

The fourth round of semiannual groundwater monitoring was completed between October 5 and 7, 2009 for the wells shown on Figure 1. Groundwater samples were collected using low-flow purging and sampling methods. (The previous consultants did not use low-flow sampling methods; however, low-flow sampling was specified for the implementation of the MNA Demonstration workplan.) Groundwater samples were sent to Pace Analytical Services, Inc., and laboratory-analyzed for chloride, iron, manganese, nitrogen, sulfate, total organic carbon (TOC), and chlorinated volatile organic compounds (CVOCs). The laboratory reports for this period are included in Attachment A. In addition, the water level, pH, specific conductivity, temperature, oxidation-reduction potential (ORP), and dissolved oxygen (DO) concentration of the groundwater samples were measured in the field.

### **Results**

The results of the CVOC analysis are summarized in Table 1, and the results of the field parameter measurements and nonvolatile compound laboratory analyses are summarized in Table 2. In general, NR 140 ES exceedences for trichloroethene (TCE) do remain, but the overall plume containing TCE impacts is stable to decreasing in extent. There are currently no NR 140 ES exceedences for 1,1,1-TCA on-site or in the downgradient plume.

For the on-site wells in the West Dock Area, reductive dechlorination continues to control the transport of TCE in the groundwater; as demonstrated by the decrease in concentration of TCE between MW-25 and downgradient well MW-26, and the concurrent increase in the concentration of the breakdown products cis-1,2-DCE and vinyl chloride between these two wells. In addition, reducing conditions persist in this area, with ORP less than -50mV and DO less than 1 ppm.

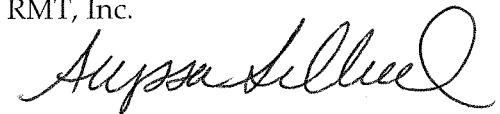

The TCE plume that extends downgradient from the West Dock Area is stable to decreasing in extent. The concentration of TCE, and all other CVOCs, continue to be below the limit of detection in sentinel wells MW-20BR1 and MW-20BR2. The concentrations of TCE at specific wells within the plume are relatively stable, with the exception of MW-9D, MW-18BR2, and MW-19B. In each case, a slight increasing trend in TCE has been observed over the most recent four sampling events. However, reductive dechlorination is on-going in each of these wells, as demonstrated by the elevated concentrations of cis-1,2-DCE and the presence of reducing conditions in the aquifer.

The completion of the October 2009 sampling event fulfills the four rounds of semi-annual MNA sampling that were approved by the WDNR for Tecumseh. In order to define the next steps for the site, RMT and Tecumseh met with the WDNR on February 23, 2010. Within that meeting, the WDNR agreed that additional sampling is not required for the site at this time, and that Tecumseh can apply for site closure, with the contingency that Tecumseh can demonstrate that the vapor intrusion risk will be mitigated. Tecumseh is submitting a Vapor Intrusion Remedy Workplan concurrent with this final Status letter and anticipates submitting the formal request for closure by April 2010.

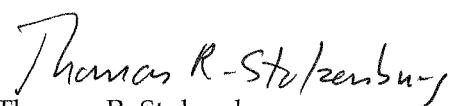

Please feel free to contact Mr. Tom Stolzenburg, at 608-662-5287, or Alyssa Sellwood, at 608-662-5480, if you have any questions.

Sincerely,

Notes:

NM = not measured. Water levels cannot be measured in the multi-level water 100 wells.

NS = not sampled.

B = analyte present in the method blank.

H = preservation, extraction, or analysis performed past holding time.

J = estimated value.

M = matrix spike recovery was outside laboratory control limits.

R1 = relative percent difference (RPD) value was outside control limits.

-- = not analyzed. ORP meter malfunctioned during October 2009 sampling, and therefore ORP not recorded for all samples.

2. PW-30 WAS ABANDONED ON SEPTEMBER 3, 2008 AND WAS THEREFORE REMOVED FROM THE MNA PROGRAM.
3. THE LOCATION OF MW-22BR(old) WAS BASED ON HISTORICAL MAPPING FROM THE SITE, BUT IS NOT THE LOCATION OF THE WELL INCLUDED IN RMT'S SAMPLING PROGRAM. THE PRECISE LOCATION OF MW-22BR WAS SURVEYED WITH A GPS UNIT IN JULY 2008, AND IS SHOWN ON THIS FIGURE. RMT HAS NOT FIELD VERIFIED IF A WELL IS LOCATED AT MW-22BR(old).

## QUALIFIERS

Project: 7397.07 TECUMSEH MNA  
Pace Project No.: 4023503

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

### LABORATORIES

PASI-G Pace Analytical Services - Green Bay

### ANALYTE QUALIFIERS

1j Parent sample was within range. Spiking resulted in the MS/MSD going over range.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

## QUALIFIERS

Project: 7397.07 TECUMSEH MNA  
Pace Project No.: 4023646

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

### LABORATORIES

PASI-G Pace Analytical Services - Green Bay

### ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
