Re: Notification of Indoor Air Sampling Results - June 2023  
Christ Church MKE  
1422 Vel R Phillips Avenue  
Milwaukee, Wisconsin

Dear Mr. Beyer:

On behalf of Milwaukee Plating, Inc. (Milwaukee Plating), GZA GeoEnvironmental, Inc. (GZA) is providing you with the indoor air sampling results from the June 2023 activities for the Christ Church MKE property located at 1422 Vel R Phillips Avenue in Milwaukee, Wisconsin.

Milwaukee Plating collected indoor air samples from inside of the Christ Church MKE building over a seven-day period from May 30 through June 6, 2023, as part of the investigation of trichloroethene (TCE) vapors that were previously detected in the air inside of the building. The Wisconsin Department of Natural Resources (WDNR) has identified Milwaukee Plating as a potential source of these vapors due to its use in its operations. The WDNR Bureau of Remediation and Redevelopment Tracking System (BRRTS) Number for the Site is BRRTS #02-41-000826. Information on the Milwaukee Plating site is provided on the BRRTS website at: <https://apps.dnr.wi.gov/botw/GetActivityDetail.do?dsn=35320&siteId=599000&crumb=1>.

The following is the contact information for the WDNR Project Manager, Ms. Linda Michalets:

Ms. Linda Michalets – Advanced Hydrogeologist  
1027 West Saint Paul Avenue  
Milwaukee, Wisconsin 532233-2641

#### AIR SAMPLE RESULTS

On May 30, 2023, GZA met with you to gain access to the Christ Church MKE building to deploy seven passive air samplers throughout the building. The purpose of the sampling was to evaluate the indoor air of the Christ Church MKE building for volatile organic compounds (VOCs) that were previously reported in samples collected by Christ Church MKE and the Wisconsin Department of Health Services. These samples were collected after the completion of repairs to the vapor degreaser that is used as part of the Milwaukee Plating operations.

GZA deployed a total of seven Radiello® 130 passive air samplers inside of the Christ Church MKE building. Two samplers were deployed in the basement, first floor, and second floor, and one sampler was deployed near the west exit door in the stairwell on the first floor. In the basement, first floor, and second floor, one sampler was deployed in a central location in the east and west

half of the respective floor. In the basement, sampler IA-1 and IA-2 were deployed in a similar location to the sample previously collected by Christ Church MKE and labeled as Print Cage and Center Corridor, respectively. Sampler IA-3 was deployed near the west exit door in a similar location to the sample collected by Christ Church MKE and labeled as 1<sup>st</sup> Flr-West Stair Exit Door. The samples on the 2<sup>nd</sup> Floor were collected from central areas and GZA could not confirm if they correspond to samples previously collected by Christ Church MKE. The sample collected outside of the Christ Church MKE building in the alley, OA-1, was collected adjacent to the west exit door.

The samples were retrieved on June 6, 2023, and shipped under chain-of-custody control to Eurofins Air Toxics for VOC analysis by United States Environmental Protection Agency (USEPA) modified Method TO-17. The results of the air samples collected inside of the Christ Church MKE building are summarized on the attached **Table 1** and are shown on the attached **Figure 1**. The laboratory analytical data report is provided in **Attachment 1**.

The results of the air samples collected inside of the Christ Church MKE building were evaluated by comparing the results to the WDNR Vapor Action Levels (VALs) for Small Commercial buildings. Based on this comparison the results for these samples were less than the WDNR quick-reference look-up VALs, dated December 2022, for TCE.

Thank you again for the opportunity to collect the air samples on your property. Should you have questions regarding the attached results of the analytical testing, please feel free to contact the undersigned at (262) 754-2574.

Very truly yours,

**GZA GeoEnvironmental, Inc.**

GZA GeoEnvironmental, Inc.

17975 West Sarah Lane

Suite 150

Brookfield WI 53045

Project Name: MKE Plating

Project #: 20.0157661.01

Workorder #: 2306163

Dear Ms. Heidi Woelfel

The following report includes the data for the above referenced project for sample(s) received on 6/8/2023 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Passive S.E. RAD130/SKC are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Jade White at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Jade White

Project Manager

**LABORATORY NARRATIVE  
RAD130 Passive SE by Mod EPA TO-17  
GZA GeoEnvironmental, Inc.  
Workorder# 2306163**

Ten Radiello 130 (Solvent) samples were received on June 08, 2023. The laboratory analyzed the charcoal sorbent bed of the passive sampler following modified method EPA TO-17. The VOCs were chemically extracted using carbon disulfide and an aliquot of the extract was injected into a GC/MS for identification and quantification of volatile organic compounds (VOCs).

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the sampling rate for each VOC. If sampling rates were calculated by the lab or the manufacturer, the concentration result has been flagged as an estimated value. Results are not corrected for desorption efficiency.

The reference method used for this procedure is EPA TO-17, which describes the collection of VOCs in ambient air using sorbents and analysis by GC/MS. Because TO-17 describes active sample collection using a pump and thermal desorption as the preparation step, several modifications are required. Modifications to TO-17 are listed in the table below:

<i>Requirement</i>	<i>TO-17</i>	<i>ATL Modifications</i>
Sample Collection	Pump pulls measured air volume through sorbent tube	VOCs in air adsorbed onto sorbent bed passively through diffusion
Sample Preparation	Thermal extraction	Solvent extraction
Sorbent tube conditioning	Condition newly packed tubes prior to use	Charcoal-based sorbent is a single use media and conditioning is conducted by vendor.
Instrumentation	Thermal desorption introduction system	Liquid injection introduction system
Internal Standard	Gas-phase internal standard introduced on the tube or focusing trap during analysis	Liquid-phase internal standard introduced on the tube at the time of extraction
Media and sample storage	<4 deg C, 30 days	Media shelf life is determined by vendor; sample hold-time is 6 months for the RAD130 and WMS. Sample preservation requirements are storage in a cool, solvent-free refrigerator and optional use of ice during shipping.
Internal Standard Recovery	+/-40% of daily CCV area	-50% to +100% of daily CCV area

**Receiving Notes**

The Chain of Custody contained incorrect method information. EATL proceeded with the analysis as per the original contract or verbal agreement.

**Analytical Notes**

The uptake rates were corrected based on average field temperatures if provided. In the absence of

---

field temperatures, the uptake rates determined at 25 deg C were used.

To calculate ug/m<sup>3</sup> concentrations in the Lab Blank, a sampling duration of 10055 minutes was applied. The assumed temperature used for the uptake rate is listed on the data page. If the field temperatures were provided, the rate was adjusted in the same manner as the field samples.

### **Definition of Data Qualifying Flags**

Ten qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

C - Estimated concentration due to calculated sampling rate

CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Methyl tert-butyl ether	99	70-130
Hexane	91	70-130
Ethyl Acetate	102	70-130
2-Butanone (Methyl Ethyl Ketone)	92	70-130
Chloroform	101	70-130
1,1,1-Trichloroethane	100	70-130
Cyclohexane	92	70-130
Carbon Tetrachloride	104	70-130
Benzene	83	70-130
1,2-Dichloroethane	96	70-130
Heptane	90	70-130
Trichloroethene	95	70-130
4-Methyl-2-pentanone	90	70-130
Toluene	84	70-130
Tetrachloroethene	92	70-130
Chlorobenzene	85	70-130
Ethyl Benzene	89	70-130
m,p-Xylene	85	70-130
o-Xylene	83	70-130
Styrene	62	20-100
Propylbenzene	87	70-130
1,4-Dichlorobenzene	76	50-110
Naphthalene	20	5-80

Container Type: NA - Not Applicable
