Re: Monthly Monitoring Report for the Oconomowoc Groundwater Treatment Facility

Dear Mr. Kozol:

Attached is the Monthly Monitoring Report for January, 1999 for the above referenced project. Questions regarding these reports should be directed to James Chang of APL, Inc. at (414) 355-5800.

Thank you for your continued cooperation and assistance with this project.

Sincerely,

Dean Groleau, Plant Superintendent  
APL, Inc.

**MONTHLY MONITORING REPORT  
FOR THE  
OCONOMOWOC ELECTROPLATING  
GROUNDWATER TREATMENT FACILITY**

**ASHIPPUN, WISCONSIN 53003**

**Prepared for:**

**U.S. ARMY CORPS OF ENGINEERS  
ST. PAUL DISTRICT  
HASTINGS, MINNESOTA  
CONTRACT DACW37-98-C-0009**

**Prepared by:**

**APL, Inc.  
8222 West Calumet Road  
Milwaukee, WI 53223**

**February 15, 1999**

## **1.0 Introduction**

This report summarizes the monthly effluent monitoring results for the Oconomowoc Electroplating Groundwater Treatment Plant (OEGTP) for January, 1999. The OEGTP is located at the site of the former Oconomowoc Electroplating Company, in ASHIPPUN, WI.

Laboratory results of effluent sampling can be found in the Discharge Monitoring Report Form, sent under separate cover. The effluent sampling was conducted by Scott Harrison, Tony Goodman, and Dave Dugan of APL, Inc. Laboratory analysis was provided by APL, Inc., 8222 W. Calumet Road, Milwaukee WI 53223. All sampling and analyses were conducted in accordance with the Oconomowoc Electroplating Groundwater Treatment System's Chemical Data Acquisition Plan (CDAP). The parameters tested for, frequency of testing, sample type, and limits are set forth in the Final Discharge Limits, Table 1 of the Oconomowoc Electroplating Superfund Site Limits and Requirements for Discharge of Treated Groundwater, issued by the Wisconsin Department of Natural Resources (WDNR) on September 24, 1996. This report is submitted in accordance with the reporting requirements of the WDNR permit.

### **1.1 Site Background Review**

The OEGTP is located at 2572 Oak Street in Ashippun, Wisconsin, in the NW 1/4 of the SE 1/4 of Section 30, Township 30 North, Range 17 East. The site consists of approximately 10 acres, which includes approximately 3.5 acres of the former electroplating facility. The site is bounded by Oak Street (Highway 'O') and Eva Street to the North, and Davey Creek and the Town of Ashippun's garage facilities to the South. The property directly across Oak Street is occupied by Thermogas, Inc. A residential area is located across Eva Street, and a wetlands surrounds Davey Creek.

The contact person is Arne Thomsen of the U.S. Army Corps of Engineers (USACE). Mr. Thomsen's phone number is (612) 438-3076, Fax (612) 438-2464. APL, Inc. is contracted by the USACE to operate and maintain the plant. The contact for the Treatment Plant is Dean Groleau who can be reached at (920) 474-3212, Fax (920) 474-4241. The contact for APL, Inc. is James Chang, who can be reached at (414) 355-5800, Fax (414) 355-3099.

## **1.2 Project Objectives**

The objective of this project is to prevent the spreading of any plume of contamination that may exist at the site. Contaminated groundwater is pumped from five extraction wells, treated for cyanide, metals, suspended solids, and volatile organic compounds (VOC's). The treated water is then transferred to a groundwater effluent gallery, located south of Elm Street, near Davey Creek.

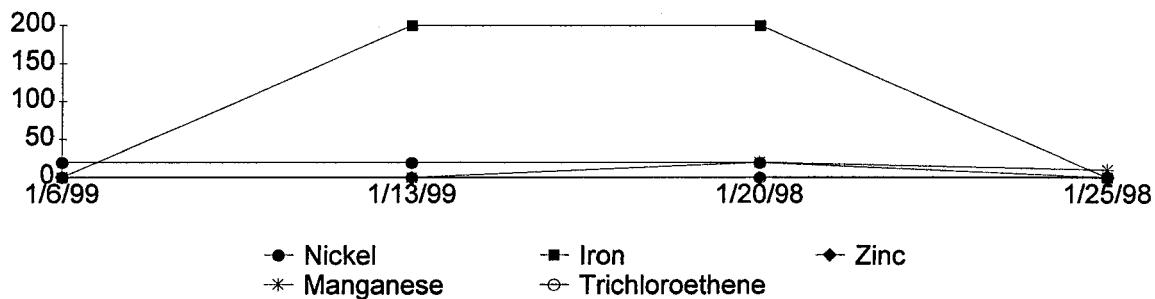

## **1.3 Effluent Monitoring**

Weekly monitoring was conducted on January 6, 13, 20, and 25. The weekly samples for January were tested by APL, Inc. The results of the effluent monitoring tests for the samples taken on January 6, 13, & 20 showed that Trichloroethene and Nickel equaled the limit of the WDNR effluent discharge permit. The results of the effluent monitoring tests for the samples taken on January 25 showed that Trichloroethene exceeded the limit of the WDNR effluent discharge permit. Paul Kozol of the WDNR authorized continuation of plant operation because the exceedence of Trichloroethene (0.8ug/l) is close to the laboratory's limit of detection (0.2ug/l) and the spent carbon is scheduled to be changed out in the near future. The possible causes of the high levels and exceedence are discussed in Section 2.0.

## **1.4 Monitoring Results**

Results from weekly effluent monitoring can be found in the Discharge Monitoring Report Form, sent under a separate cover. Chart 1, below, shows the results of effluent monitoring for five important indicator parameters listed in the Monitoring Requirements of the Oconomowoc Electroplating Superfund Site Substantive WPDES Permit Requirements Summary (9/96). The January sampling results showed 1 exceedence in TCE.

**Chart 1 - 5 Important Indicator Parameters**

## **2.0 Plant Permit Exceedences**

The possible cause for high level for TCE and VOCs in the January samplings was due to the blower duct on the Diffused Air Stripper had a tear in it. The tear was discovered on December 26 and a PVC replacement was ordered. The PVC replacement duct was received and installed on December 30. The blower's output went from 15 to 40 + inches of water column after the new blower duct was installed. Operating the Treatment Plant while having the tear in the DAS-500 blower duct resulted in a shorter life span of the Granulated Activated Carbon Filters (GAC-650/651).

The possible cause for high level for Metals in the January samplings may be due to the daily backwashing of the Tertiary Filtration System (TF-600) that requires temporarily by-passing it during the Manual effluent backwashing. The operators attempt to reduce this by-passing time by pumping the Clarifier (C-400) to the Sludge Holding Tank (ST-820) and cleaning it out at the same time as the backwashing of TF-600. Some flow past TF-600 is unavoidable without shutting down the plant on a daily basis. Another possible source of Metals is the evident deterioration of the metal piping after the Sulfuric Acid Static Mixer to the NPDES Monitor Station.

During January, the Treatment Plant had problems that were due to the "Blizzard of 1999." On January 2, the operator on duty was unable to drive to the Treatment Plant due to 20+ inches of snowfall. This led to too much sludge build-up in the Clarifier (C-400) which flowed into the Tertiary Filter (TF-600) that plugged the media and dumped all of the treated water into the Floor Trench Sump. The water was pumped back into the Equalization Tank (EQT-100) for retreatment. This filled up the EQT-100 and shut down the Extraction Well Field (EW's). While the EW's were shut down, 2 of the 5 pump-lines froze up from the sub-zero temperatures. The

Treatment Plant building was found flooded but still operating upon the arrival of the Sunday operator on January 3. The operator called in the Saturday operator to assist him and, together, they managed to get rid of the excess treated water. The operators are instructed to perform a daily effluent backwash on TF-600 and at the same time to transfer C-400 to the Sludge Holding Tank (ST-820). This procedure has been in affect since the new media had been put into TF-600. This has been the first time that it was not followed and it resulted in 2 EW's freezing up, a 4 week plugging of TF-600, and the flooding of the Treatment Plant building. All water was contained in the building but there is the possibility that the water could flow out of the building because there is not a fail-safe that would shut down the Treatment System Feed Pumps when the Floor Trench Sump reaches its HIGH-HIGH Level Alarm.

On January 11, Paul Kozol, of the WDNR, authorized the by-passing of TF-600 during the time that the Treatment Plant was unmanned because of the media binding due to the January 2 incident. The TF-600 plugged up shortly after the operators had left the Treatment Plant at the end of the work day. This resulted in most of the treated water returning to the EQT-100 and filling it. When the EQT-100 reaches 90% full, the Extraction Well pumps were shut down. During the Blizzard of 1999 Arctic Cold spell, 2 of the 5 Extraction Well pipelines froze up. An electrician was called in to install temporary outlets so that space heaters could be placed at the well heads to assist in thawing them out. The Heat Trace System did not provide enough heat to prevent the pipelines from freezing. This may be due to inadequate or damp insulation. The Treatment Plant was operated in this "batch feed mode" during the cold spell to prevent the EQT-100 from reaching 90% full and to keep the Extraction Wells operating. All 5 Extraction Wells were functioning and the cold spell ended on January 18 but the problem with TF-600 persisted until January 30.

## **2.1 Treatment Plant Shut Downs**

The Treatment Plant was shut down ten times for a total of 44.75 hours in January, 1999. There was one shut down due to the Treatment Plant flooding. There was one shut down due to the Treatment System Feed Pump (TFP-110) failing. There were 4 shut downs due to the low Equalization Tank (EQT-100) level caused from by-passing the Tertiary Filtration System (TF-600) during the cold spell. There was one shut down due to a clogged discharge line from the Cyanide Reduction Tank (CRT-211). There were 2 shut downs due to the Air Stripper Transfer Pumps (TP-520/521) failing. There was one shut down due to the Tertiary Filtration Tank (TFT-601) over-filling. Table 1 shows the summary of the plant down time for the month of January, 1999.

**Table 1 - Plant Down Time Summary**

Date(s)	Number Hours Shut Down	Reason
1/3	2.5	Plant Was Flooded
1/7	3	TFP-110 Failure
1/12	4	Low EQT-100 Level
1/13	3	TP-520 Failure
1/16	6.5	Low EQT-100 Level
1/17	6	Low EQT-100 Level
1/18	0.5	High TFT-601 Level
1/20	7.5	Low EQT-100 Level
1/21-22	11	TP-521 Failure
1/27	0.75	Clogged CRT-211 Discharge Line
<b>TOTAL</b>	<b>44.75</b>	

### **2.1.1. Shut Down Due To Treatment Plant Flooding**

On January 2, the operator on duty was unable to drive to the Treatment Plant due to 20+ inches of snowfall. The Treatment Plant building was found flooded but still operating upon the arrival of the Sunday operator on January 3. The operator called in the Saturday operator to assist him and, together, they managed to get rid of the excess treated water. The Treatment Plant was shut down from 11A.M. to 1:30P.M. while the operators were trying to pump the water from the Equalization Tank (EQT-100) to the Sludge Holding Tank (ST-820). Total Treatment Plant down time was 2.5 hours.

### **2.1.2. Shut Down Due To Treatment System Feed Pump Failing**

On January 7, the Treatment Plant was discovered shut down upon the arrival of the operator. The Treatment Plant had shut down at 4:30A.M. due to the failure of the Treatment System Feed Pump (TFP-110). TFP-110 was rotated out of line and TFP-111 was activated at 7:30A.M. Total Treatment Plant down time was 3 hours. TFP-110 was dismantled, inspected, and cleaned with a dilute inhibited Muriatic acid solution. The pump's failure was due to the hardness/sludge build-up on it's impeller. The impeller was lubricated and the pump was reassembled, and put in the stand-by position.

### **2.1.3. Shut Downs Due To Low Equalization Tank Level**

On January 12, 16, 17, and 20, the Treatment Plant had shut down due to operating the system in a “batch feed mode.” The Tertiary Filter (TF-600) was by-passed during the cold spell to allow the Extraction Well Pumps to continue operating and prevent their pipelines from freezing. The TF-600 media was plugged with sludge and polymer due to not being able to do a Manual effluent backwash or cleaning of the Clarifier (C-400). This procedure was authorized by Paul Kozol of the WDNR. The total Treatment Plant down time was 24 hours.

### **2.1.4. Shut Down Due To Clogged CRT-211 Discharge Line**

On January 26, the first and second stages of the Metals Package (CRT-201 & 211) started over-flowing onto the floor. They were by-passed. Plans were made for a shut down for the next morning and equipment was obtained for the clean out process.

On January 27, the Treatment Plant was shut down and the CRT-211 discharge line elbow was removed and cleaned. The discharge line piping was jetted out with a water hose. The CRT-211 discharge line elbow was re-installed and the Treatment Plant was restarted. The flow from CRT-211 returned to normal. Total Treatment Plant down time was .75 hour.

### **2.1.5. Shut Downs Due To Air Stripper Transfer Pumps Failing**

On January 13, the Treatment Plant was discovered shut down upon the arrival of the operator. The Treatment Plant had shut down at 4:00A.M. due to the failure of the Air Stripper Transfer Pump (TP-520). TP-520 was rotated out of line and TP-521 was activated at 7:00A.M. Total Treatment Plant down time was 3 hours. TP-520 was dismantled, inspected, and cleaned with a dilute inhibited Muriatic acid solution. The pump’s failure was due to the hardness/sludge build-up on it’s impeller. The impeller was lubricated and the pump was reassembled, and put in the stand-by position.

On January 21 to 22, the Treatment Plant was discovered shut down upon the arrival of the operator. The Treatment Plant had shut down at 8:00P.M. due to the failure of the Air Stripper Transfer Pump (TP-521). TP-521 was rotated out of line and TP-520 was activated at 6:45A.M. TP-521 was dismantled, inspected, and cleaned with a dilute inhibited Muriatic acid solution. The pump’s failure was due to the hardness/sludge build-up on it’s impeller. The impeller was lubricated and the pump was reassembled, and put in the stand-by position.

## **2.1.6. Shut Down Due To Tertiary Filter Tank Over-Filling**

On January 18, the Treatment Plant flow had been increased from 29GPM to 34GPM. The Treatment Plant flow increase was too much for the Diffused Air Stripper (DAS-500) to handle. This caused the Tertiary Filter Tank (TFT-601) to over-fill and shut down the Treatment Plant. After the DAS-500 and TFT-601 levels returned to normal, the Treatment Plant was restarted and the flow was reduced to 30GPM. Total Treatment Plant down time was .5 hour.

## **4.0 Summary**

Groundwater treatment plant effluent monitoring was conducted on January 6, 13, 20, and 25 of 1999. The laboratory results of these samples show that all contaminants listed in the Requirements of the Oconomowoc Electroplating Superfund Site Substantive WPDES Permit Requirements Summary (9/96) comply with the permit except for TCE on January 25. See Chart 1, Section 1.4 for important indicator parameters.

During the month of January, 1999, the plant was shut down ten times for a total of 44.75 hours. See Table 1, Section 2.1 for shut down times. All equipment operation and maintenance related issues are detailed in a separate report, entitled "*Monthly Operation and Maintenance Report for the Oconomowoc Electroplating Groundwater Treatment Facility*". That report will be submitted by February 15, 1999.

ON JANUARY 6--8, 1999, THE EFFLUENT DISCHARGE MODE WAS SWITCHED TO THE EFFLUENT TRANSFER PUMP (ETP-710). THE EFFLUENT TOTALIZER DID NOT ACTIVATE IN THIS MODE.

\*THIS NUMBER WAS ESTIMATED FROM THE AVERAGE FLOW OF 3 DAYS PRIOR AND 2 DAYS AFTER.

Approved By:

James Chang, Ph.D., Lab Director

Date: 1/19/99

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

**RJ** Result expressed as Total.

**TTR** Result expressed as total and total recoverable.

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B      "J" = Results between LOD and LOQ      "#" = no LOD or LOQ required.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

2572 Oak St.  
Ashippun, WI 53003

WDNR# 241340550

BATCH NUMBER: 990002  
DATE REPORTED: 15-Jan-99  
DATE RECEIVED: 06-Jan-99  
SAMPLE TEMP (C): Rec On Ice  
PROJECT ID:  
PROJECT NAME: Weekly Sampling

Compound	Result	Units	LOD	LOQ	PAL	Dil	RQ	Method	Analyst	Date Anal
----------	--------	-------	-----	-----	-----	-----	----	--------	---------	-----------

Approved By:

  
James Chang, Ph.D., Lab Director

Date: 1/15/99

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for

concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

Approved By:

  
James Chang, Ph.D., Lab Director

Date: 1/21/99

**RJ** Result expressed as Total.

**TTR** Result expressed as total and total recoverable.

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B      "J" = Results between LOD and LOQ      "#" = no LOD or LOQ required.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.  
DNR Analytical Detection Limit Guidance, April 1995.

SAMPLE TEMP (C): Rec On Ice  
PROJECT ID:  
PROJECT NAME: OGTP

Compound	Result	Units	LOD	LOQ	PAL	Dil	RQ	Method	Analyst	Date Anal
----------	--------	-------	-----	-----	-----	-----	----	--------	---------	-----------

Approved By: James Chang /srd Date: 1/25/99  
James Chang, Ph.D., Lab Director

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for

concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

Approved By:

James Chang, Ph.D., Lab Director

Date: 2/15/99

RJ Result expressed as Total.

TTR Result expressed as total and total recoverable.

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B      "J" = Results between LOD and LOQ      "#" = no LOD or LOQ required.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

## ORGANIC REPORT

WDNR# 241340550

BATCH NUMBER: 990039  
DATE REPORTED: 29-Jan-99  
DATE RECEIVED: 26-Jan-99  
SAMPLE TEMP (C): Rec On Ice  
PROJECT ID:  
PROJECT NAME:

Compound	Result	Units	LOD	LOQ	PAL	Dil	RQ	Method	Analyst	Date Anal
----------	--------	-------	-----	-----	-----	-----	----	--------	---------	-----------

Approved By: James Chang, Lab. Date: 1/29/99  
James Chang, Ph.D., Lab Director

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range .

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.  
DNR Analytical Detection Limit Guidance, April 1995.
