Re: Monthly Monitoring Report for the Oconomowoc Groundwater Treatment Facility

Dear Mr. Kozol:

Attached is the Monthly Monitoring Report for February, 1999 for the above referenced project. Questions regarding these reports should be directed to James Chang of APL, Inc. at (414) 355-5800.

Thank you for your continued cooperation and assistance with this project.

Sincerely,

Dean Groleau, Plant Superintendent  
APL, Inc.

Milwaukee, WI 53223**

**March 15, 1999**

## **1.0 Introduction**

This report summarizes the monthly effluent monitoring results for the Oconomowoc Electroplating Groundwater Treatment Plant (OEGTP) for February, 1999. The OEGTP is located at the site of the former Oconomowoc Electroplating Company, in ASHIPPUN, WI.

Laboratory results of effluent sampling can be found in the Discharge Monitoring Report Form, sent under separate cover. The effluent sampling was conducted by Scott Harrison, Tony Goodman, and Dave Dugan of APL, Inc. Laboratory analysis was provided by APL, Inc., 8222 W. Calumet Road, Milwaukee WI 53223. All sampling and analyses were conducted in accordance with the Oconomowoc Electroplating Groundwater Treatment System's Chemical Data Acquisition Plan (CDAP). The parameters tested for, frequency of testing, sample type, and limits are set forth in the Final Discharge Limits, Table 1 of the Oconomowoc Electroplating Superfund Site Limits and Requirements for Discharge of Treated Groundwater, issued by the Wisconsin Department of Natural Resources (WDNR) on September 24, 1996. This report is submitted in accordance with the reporting requirements of the WDNR permit.

### **1.1 Site Background Review**

The OEGTP is located at 2572 Oak Street in Ashippun, Wisconsin, in the NW 1/4 of the SE 1/4 of Section 30, Township 30 North, Range 17 East. The site consists of approximately 10 acres, which includes approximately 3.5 acres of the former electroplating facility. The site is bounded by Oak Street (Highway 'O') and Eva Street to the North, and Davey Creek and the Town of Ashippun's garage facilities to the South. The property directly across Oak Street is occupied by Thermogas, Inc. A residential area is located across Eva Street, and a wetlands surrounds Davey Creek.

The contact person is Arne Thomsen of the U.S. Army Corps of Engineers (USACE). Mr. Thomsen's phone number is (612) 438-3076, Fax (612) 438-2464. APL, Inc. is contracted by the USACE to operate and maintain the plant. The contact for the Treatment Plant is Dean Groleau who can be reached at (920) 474-3212, Fax (920) 474-4241. The contact for APL, Inc. is James Chang, who can be reached at (414) 355-5800, Fax (414) 355-3099.

## **1.2 Project Objectives**

The objective of this project is to prevent the spreading of any plume of contamination that may exist at the site. Contaminated groundwater is pumped from five extraction wells, treated for cyanide, metals, suspended solids, and volatile organic compounds (VOC's). The treated water is then transferred to a groundwater effluent gallery, located south of Elm Street, near Davey Creek.

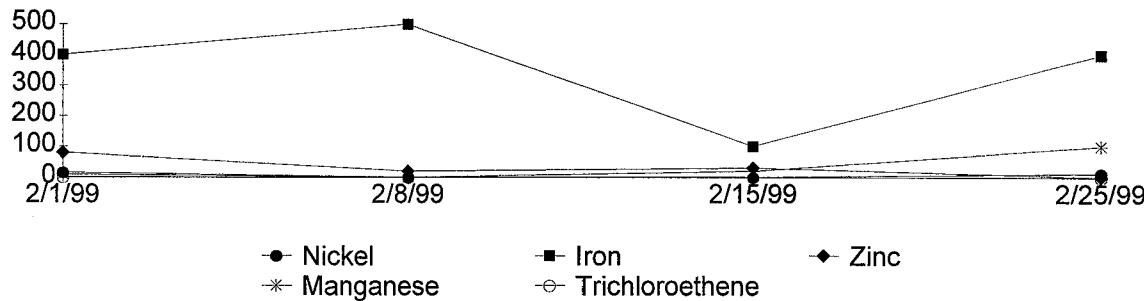

## **1.3 Effluent Monitoring**

Weekly monitoring was conducted on February 1, 8, 15, and 25. The weekly samples for February were tested by APL, Inc. The results of the effluent monitoring tests for the samples taken on February 1, & 8 showed that Trichloroethene exceeded the limit of the WDNR effluent discharge permit. On February 1, the TCE result was 0.9ug/l and on February 8, the TCE result was 1.1ug/l. The Treatment Plant's TCE limit is 0.5ug/l and the Enforcement Standard is 5ug/l. Paul Kozol of the WDNR authorized continuation of plant operation because the spent Carbon was scheduled to be changed out on February 10 and 11. The Treatment Plant operators were waiting for the arrival of the Barrel Vac that had been purchased by the USACE. The results of the effluent monitoring tests for the samples taken on February 15 showed that Trichloroethene equaled the limit of 0.5ug/l and on February 25, the limit was 0.4ug/l on the WDNR effluent discharge permit. The possible causes of the high levels and exceedence are discussed in Section 2.0.

## **1.4 Monitoring Results**

Results from weekly effluent monitoring can be found in the Discharge Monitoring Report Form, sent under a separate cover. Chart 1, below, shows the results of effluent monitoring for five important indicator parameters listed in the Monitoring Requirements of the Oconomowoc Electroplating Superfund Site Substantive WPDES Permit Requirements Summary (9/96). The February sampling results showed 2 exceedences in TCE.

### Chart 1 - 5 Important Indicator Parameters

## 2.0 Plant Permit Exceedences

The possible cause for high level for TCE and VOCs in the February samplings was due to the blower duct on the Diffused Air Stripper had a tear in it. The tear was discovered on December 26 and a PVC replacement was ordered. The PVC replacement duct was received and installed on December 30. The blower's output went from 15 to 40 + inches of water column after the new blower duct was installed. Operating the Treatment Plant while having the tear in the DAS-500 blower duct resulted in a shorter life span of the Granulated Activated Carbon Filters (GAC-650/651).

The possible cause for high level for Metals in the February samplings may be due to the daily backwashing of the Tertiary Filtration System (TF-600) that requires temporarily by-passing it during the Manual effluent backwashing. The operators attempt to reduce this by-passing time by pumping the Clarifier (C-400) to the Sludge Holding Tank (ST-820) and cleaning it out at the same time as the backwashing of TF-600. Some flow past TF-600 is unavoidable, with out shutting down the plant on a daily basis. Another possible source of Metals is the evident deterioration of the metal piping after the Sulfuric Acid Static Mixer to the NPDES Monitor Station. New leaks have developed in the metal piping located between the Diffused Air Stripper (DAS-500) and the Granulated Activated Carbon Filters (GAC-650/651). The metal piping should be changed to PVC to reduce further damage to the pumps and lower the amount of uncontrolled Metals that are entering the effluent waste stream.

## **2.1 Treatment Plant Shut Downs**

The Treatment Plant was shut down two times for a total of 10.25 hours in February, 1999. The shut downs were due to the low Equalization Tank (EQT-100) levels caused from over-estimating the backwash flow from the Tertiary Filtration System (TF-600). Table 1 shows the summary of the plant down time for the month of February, 1999.

**Table 1 - Plant Down Time Summary**

| <b>Date(s)</b> | <b>Number Hours<br/>Shut Down</b> | <b>Reason</b>     |
|----------------|-----------------------------------|-------------------|
| 2/1            | 5.5                               | Low EQT-100 Level |
| 2/22           | 4.75                              | Low EQT-100 Level |
| <b>TOTAL</b>   | <b>10.25</b>                      |                   |

### **2.1.1. Shut Down Due To Low Equalization Tank Level**

On February 1, the Treatment Plant was discovered shut down upon the arrival of the operator. A walk-through inspection showed that the Treatment Plant had shut down automatically due to a low level (<25%) in the Equalization Tank (EQT-100). The reason for this was due to the decreased backwash flow rate from the Tertiary Filtration System (TF-600) after unbinding the media from the “Blizzard Of 1999” incident that occurred on January 2 &3. See January’s Monthly Monitoring Report. The backwash rate from TF-600 was 5gpm before the incident and 2gpm after finally unbinding the media on January 30. The Treatment Plant down time was from 3:30A.M. to 9A.M. for a total of 5.5 hours.

### **2.1.2. Shut Down Due To Low Equalization Tank Level**

On February 20, the Saturday operator had discovered that the Tertiary Filtration System (TF-600) media had clogged up and could not reach the pneumatic media up-lift system that keeps the media cleansed. The Floor Trench Sump, the Equalization Tank (EQT-100), and the Sludge Holding Tank (ST-820) had high levels. The Extraction Wells (EW-1, 2, 3, 4, & 5) were shut off, but the high levels remained throughout the shift except in the ST-820. EW-2 was activated at the end of the shift, but EW-1, 3, 4, & 5 were left off to lower the EQT-100 level. On February 21, the Sunday operator performed another effluent backwash on TF-600 and activated EW-1 & 2. The clogged media had freed up and the backwash return rate had reduced after the Sunday operator had gone for the day. At 4:30A.M. on February 22, the EQT-100 level

had dropped below 25% and shut down the Treatment System. The operators had discovered the shut upon their arrival for the day and everything was dumped into the Floor Trench Sump and all EW's were activated to speed up the Treatment Plant's start up in the automatic mode. The Treatment Plant started back up at 9:15A.M. and the total shut down time was 4.75 hours.

#### **4.0 Summary**

Groundwater treatment plant effluent monitoring was conducted on February 1, 8, 15, and 25 of 1999. The laboratory results of these samples show that all contaminants listed in the Requirements of the Oconomowoc Electroplating Superfund Site Substantive WPDES Permit Requirements Summary (9/96) comply with the permit except for TCE on February 1 and 8. See Chart 1, Section 1.4 for important indicator parameters.

During the month of February, 1999, the plant was shut down two times for a total of 10.25 hours. See Table 1, Section 2.1 for shut down times. All equipment operation and maintenance related issues are detailed in a separate report, entitled "*Monthly Operation and Maintenance Report for the Oconomowoc Electroplating Groundwater Treatment Facility*". That report will be submitted by March 15, 1999.

|------|--------|-------|----|-----|-----|--------|---------|-----------|-----|----------|
|------|--------|-------|----|-----|-----|--------|---------|-----------|-----|----------|

Approved By:  Date: 2/25/99  
James Chang, Ph.D., Lab Director

**RJ** Result expressed as Total.

**TTR** Result expressed as total and total recoverable.

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for concentrations between 1-99 ug/L, and one significant figure for lower concentrations.  
DNR Analytical Detection Limit Guidance, April 1995.

James Chang  
Oconomowoc Groundwater Treatment Plant  
2572 Oak St.  
Ashippun, WI 53003

BATCH NUMBER: 990095  
DATE REPORTED: 11-Feb-99  
DATE RECEIVED: 09-Feb-99  
SAMPLE TEMP (C): Rec On Ice  
PROJECT ID:  
PROJECT NAME:

| Compound | Result | Units | LOD | LOQ | PAL | Dil | RQ | Method | Analyst | Date Anal |
|----------|--------|-------|-----|-----|-----|-----|----|--------|---------|-----------|
|----------|--------|-------|-----|-----|-----|-----|----|--------|---------|-----------|

Approved By: James Chang (sm) Date: 2/11/99  
James Chang, Ph.D., Lab Director

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range.

LOQ =  $10(S)$  x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD =  $3.143(S)$  x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for

concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.

MDL: Method Detection Limit determined by 40CFR Part 136 Appendix B "e" = Estimate value, over calibration range.

LOQ = 10 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

LOD = 3.143 (S) x Dilution Factor, where "S" is the Standard Deviation from the MDL Study

PAL: Preventive Action Limit, NR 140.10 Public health related groundwater standards. "ns" = not specified

RQ : Run Qualifier; "J" = Results between LOD and LOQ. "RR" = Re-extract Rerun sample, "B" = Showed in Blank sample.

Rounding Rules: Three significant figures were used for concentrations above 99 ug/L, two significant figures for

concentrations between 1-99 ug/L, and one significant figure for lower concentrations.

DNR Analytical Detection Limit Guidance, April 1995.
