Subject: Groundwater Monitoring Requirements, Ripon FF/NN Landfill Superfund Site

Dear Mr. Roder:

On January 7, 1998 HSI Geotrans submitted a request to modify the groundwater monitoring requirements for the Ripon FF/NN landfill Superfund site. The request was made because groundwater data collected at MW-102, P-103, P-104 and MW-108 have shown little to no contamination over the past couple of years.

I have reviewed the groundwater data for these and the other wells in the monitoring plan. The Department hereby approves of your request to delete these wells from the groundwater sampling requirements. However, you should maintain the wells in operating condition and continue to measure groundwater elevations at the wells when collecting groundwater samples from the other wells at the site.

Should you have any questions I can be reached at the number below.

Sincerely,

Stephen M. Ales, P.G.
Remediation & Redevelopment Hydrogeologist
