**Site:** RIPON TN RIPON CTY  
**Lic #:** 467  
**For report period(s):** 10/01/18  
**Uploaded:** 01/03/19 by Mike Solomon  
**File received:** 01/03/19

The following **item(s) of possible concern:** were noted in this data submittal:

- Result records for private wells (Pt. Type 13) were NOT included in this upload.
- There were no result records for parameter code 31 (Leachate, Depth of (from top to bottom in ft)) with values >20 ft in this upload.
- There were no result records for point type 24 (Leachate Head Well) and parameter code 31 (Leachate, Depth of, from top to bottom in ft) with values >1 ft included in this upload.
- There were no result records for parameter code 85547 (METHANE (CH4) IN AIR SAMPLE, VOL % OF DISS GASES) with values >1.25% in this upload.
- Result records for groundwater monitoring wells (Pt. Types 11, 12, 71 and 72) exceeding ES and PAL standards were included in this upload (any ACLs and QC flag failures are not included). ES exceedances are in green font.

\*Manganese is unique among GEMS parameters in that it has an ES and PAL in both NR140, Tables 1 Public Health, and 2 Public Welfare. GEMS is not designed to distinguish whether the ES or PAL for Mn originates from NR140 Table 1 or 2. The type of exceedance (ES or PAL) and table (Health or Welfare) will be evident based on the result value. Mn standards are listed below:

Public Welfare PAL (PW PAL) = 25 ppb  
 Public Welfare ES (PW ES) = 50 ppb  
 Public Health PAL (PH PAL) = 60 ppb  
 Public Health ES (PH ES) = 300 ppb

Result = < 25 ppb.....No standards apply.  
 25 - 49 ppb.....PW PAL  
 50 - 59 ppb.....PW ES & PW PAL  
 60 - 299 ppb.....PH PAL & PW ES & PW PAL  
 >299 ppb.....PH ES & PH PAL & PW ES & PW PAL
