**Re: Groundwater Monitoring Results Submittal**  
**Tecumseh Products Co – New Holstein, 1604 Michigan Ave, New Holstein**  
**BRRTS 02-08-363333**

Dear Mr. McKnight:

This letter documents results from the post-remediation groundwater sampling event from the former plating areas in accordance with the WDNR request included in the August 13, 2021, *Remedial Action Plan* (RAP) approval and associated Infiltration/Injection Temporary Exemption (July 2, 2021). Attachments to this letter include a Site figure showing the groundwater sampling locations, summary tables of field parameters and of the analytical results, and the analytical laboratory report.

On April 27, 2021, TRC (on behalf of Tecumseh Products Company LLC [Tecumseh]) submitted the RAP to WDNR. As part of WDNR's July 2, 2021, RAP approval and as reiterated in the August 13, 2021, WDNR response to Tecumseh's questions regarding the RAP approval, WDNR requested post-remediation groundwater sampling within 180 days after injection is complete. As documented in the December 30, 2021, Remedial Action Documentation Report the injections were completed by November 10, 2021.

In accordance with the WDNR approval and injection exemption, on October 25, 2022, TRC collected groundwater samples from MW-E, TEC-1, TEC-1A, TEC-3, TEC-4, MW-5, MW-8, NH-7, NH-26, MW-A, MW-B and MW-F. The monitoring well locations are shown on the attached Figure 1 in Attachment 1. The groundwater samples were analyzed for dissolved hexavalent chromium and dissolved total chromium. Field parameters collected included temperature, conductivity, turbidity, dissolved oxygen, total dissolved solids (TDS), pH and oxidation/reduction potential (ORP).

Prior to groundwater sampling, water levels were measured at each monitoring well with a water level meter. Groundwater samples were collected using low-flow sampling techniques with an Alexis peristaltic pump and YSI ProDSS Sonde M4 multi-parameter meter and flow cell. During well purging, field parameters (temperature, conductivity, turbidity, dissolved oxygen, TDS, pH and ORP) were measured and allowed to stabilize prior to sampling. Low-flow sampling stabilization forms are provided in Attachment 2. Groundwater samples were field-filtered using a 0.45-micron groundwater filter and were analyzed for dissolved hexavalent chromium and total dissolved chromium using method SM 3500-Cr B and EPA 6010D, respectively. All samples were packaged in a cooler and delivered directly to Pace Analytical Services, LLC in Green Bay, Wisconsin (Pace) under standard chain of custody procedures.

## Groundwater Elevations

Table 1 presents a summary of water level measurements collected during events between 2009 and 2022 and Figure 1 presents the groundwater elevation contours for the October 2022 sampling event. The groundwater gradient is oriented from the east/southeast portion of the facility, towards the west. Groundwater elevations were deeper by more than a foot from the previous groundwater monitoring event in May 2022. Groundwater continues to exhibit an overall westerly flow direction as illustrated on Figure 1.

## Groundwater Quality Assurance/Quality Control

TRC performed a Quality Assurance/Quality Control (QA/QC) review of the laboratory report in regard to analyses, procedures, and protocols performed by Pace. Samples were received by Pace within the mandated timeframe and maintained at the proper temperature. Based on the results, there were no major insufficiencies regarding surrogate recoveries, analyte detections or sample duplicate recoveries. Based on an internal review by TRC, all data were considered acceptable. QC data indicate that measurement data are sufficient to meet method quality objectives, data are defensible, and QC mechanisms were effective in ensuring measurement data reliability.

## Results

The groundwater analytical results are summarized in Table 2, which contains total dissolved chromium results from the October 2022 groundwater event, as well as previous analytical results. The low-flow stabilization geochemical results indicate that the dissolved oxygen is ranging between 0.08 and 5.02 milligrams per liter (mg/L) and conductivity is generally greater than 571 u-mhos/cm. The ORP fluctuated with no discernable trend. The pH of the groundwater is basically neutral, ranging between 6.09 and 7.60 S.U. There is no obvious difference between the geochemistry of the source area as compared to down-gradient. The laboratory analytical results are provided in Attachment 4.

Based on the results, total dissolved chromium has reduced significantly and consists predominantly of dissolved hexavalent chromium. Total chromium concentrations exceeded the Enforcement Standard (ES) in 1 of the 12 monitoring wells in October 2022 (MW-B). Monitoring wells MW-A, MW-E, TEC-1, and TEC-4 exceeded the Preventative Action Limit (PAL) in October 2022, but not the ES. The remaining seven monitoring wells, TEC-1A, TEC-3, MW-5, NH-7, MW-8, NH-26, and MW-F were below the ES and PAL.

The groundwater results show continued significant decreases in the areas where injection occurred – around TEC-3, TEC-4, TEC-1, NH-26. The groundwater impacts do not pose a threat to human health or the environment. Moreover, there is a deed restriction recorded to the property limiting certain activities and uses that further acts to protect human health and the environment. The results indicate that the injections were successful in reducing chromium impacts and MNA is a viable remedy for the site.

In preparation for site closure after a second year of monitoring post-remedy, TRC will conduct semi-annual groundwater monitoring and sampling, with the next round scheduled for spring 2023, to further assess contaminant trends and to confirm the effectiveness of the injection remedy and MNA. Samples will be collected and analyzed for total dissolved chromium and hexavalent chromium from monitoring wells MW-E, TEC-1, TEC-1A, TEC-3, TEC-4, MW-5, MW-8, NH-7, NH-26, MW-A, MW-B and MW-F.

Mr. Kevin McKnight

Notes:

ES = NR140 Enforcement Standard

PAL = NR140 Preventative Action Limit

**ITALICIZE** = Detection over NR140 PAL Limit

**BOLD** = Detection over NR140 ES Limit

U = Analyte not detected at or above reporting limit

J = Estimated value. Analyte detected at a level less than the reporting limit

"—" = Analyte was not sampled during sampling round

NM Not measured/calculated, due to Cr(VI) result greater than total Cr result.

I = PAL and ES values are for total chromium.

As such, these values are not applicable for hexavalent chromium.

2 = Trivalent chromium is the difference between total chromium and hexavalent chromium concentrations.

D3 Sample was diluted due to the presence of high levels of non-target or other matrix interference.

\* Samples from this date were only tested for Total Undissolved metals

**Notes:**

ES = NR140 Enforcement Standard

PAL = NR140 Preventative Action Limit

*ITALICIZE* = Detection over NR140 PAL Limit

**BOLD** = Detection over NR140 ES Limit

U = Analyte not detected at or above reporting limit

J = Estimated value. Analyte detected at a level less than the reporting limit and greater than or equal to the detection limit.

"--" = Analyte was not sampled during sampling round

NM Not measured/calculated, due to Cr(VI) result greater than total Cr result.

I = PAL and ES values are for total chromium.

As such, these values are not applicable for hexavalent chromium.

2 = Trivalent chromium is the difference between total chromium and hexavalent chromium concentrations.

D3 Sample was diluted due to the presence of high levels of non-target or other matrix interference.

\* Samples from this date were only tested for Total Undissolved metals

RE: Project: TECUMSEH NEW HOLSTEIN  
Pace Project No.: 40253646

Dear Chris Harvey:

Enclosed are the analytical results for sample(s) received by the laboratory on October 25, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tod Noltemeyer

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: TECUMSEH NEW HOLSTEIN  
Pace Project No.: 40253646

---

**Method:** EPA 6010D  
**Description:** 6010D MET ICP  
**Client:** TRC Environmental - IL  
**Date:** November 07, 2022

### General Information:

13 samples were analyzed for EPA 6010D by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Additional Comments:

## REPORT OF LABORATORY ANALYSIS

## PROJECT NARRATIVE

Project: TECUMSEH NEW HOLSTEIN  
Pace Project No.: 40253646

**Method:** SM 3500-Cr B  
**Description:** Chromium, Hexavalent  
**Client:** TRC Environmental - IL  
**Date:** November 07, 2022

### General Information:

13 samples were analyzed for SM 3500-Cr B by Pace Analytical Services Green Bay. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 430648

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 40253646002

M0: Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

- MS (Lab ID: 2480057)
  - Chromium, Hexavalent
- MSD (Lab ID: 2480058)
  - Chromium, Hexavalent

### Additional Comments:

Analyte Comments:

QC Batch: 430648

D3: Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

- NH-7 (Lab ID: 40253646001)
  - Chromium, Hexavalent
- TEC-3 (Lab ID: 40253646008)
  - Chromium, Hexavalent
- TEC-4 (Lab ID: 40253646007)
  - Chromium, Hexavalent

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: TECUMSEH NEW HOLSTEIN  
Pace Project No.: 40253646

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3      Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M0      Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
