SUBJECT:

Report of Fuel Spill

TO:

Wisconsin DNR

1. On 29 October, we experienced a JP4 spill of between 50 and 100 gallons. The spill site was excavated, with the soil being covered and stored while awaiting treatment and disposition (see attached maps depicting spill site).

2. Since this spill is considered a small petroleum spill, with no danger to a waterway, no immediate notification was made to DNR. I only realized today, after conversations with Mike Miller in the Rapids office, that contrary to federal rules, the DNR requires notification of any release to the environment.

3. Because of the time lapse that has occurred, I will outline what has taken place thus far:

- a. The spill was contained and the source eliminated.
- b. The entire area of the spill was excavated, with excavated soils stockpiled and covered.
- c. The spill site was covered awaiting field screening and laboratory testing.
- d. Contracting of laboratory services has begun in order to determine levels on-site and in the excavated soils.

4. I apologize for this delay. It was no attempt to be deceptive, but an error on interpretation on my part. If there are any questions or if there will be additional clean-up requirements, please call me at (608)427-1441.
