Subject: Osceola Oil Bulk Plant (Former) – Letter Report

Dear Ms. Stoltz,

Enclosed is the report for the Osceola Oil Bulk Plant (Former) site located in Milltown, Wisconsin.  
**This completes the workscope approved by the WDNR on December 1, 2017.**

### **Drilling Project**

On February 5-8, 2018, Professional Services Industries (PSI), of Chippewa Falls, Wisconsin, installed six monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6) under the direction and supervision of METCO personnel. The monitoring wells were installed to depths ranging from 35 to 36 feet below ground surface (bgs). During the drilling project, fifty-two soil samples were collected for field (PID) analysis of which three samples were submitted for laboratory analysis (PVOC, Naphthalene, PAH, and Lead). One additional soil sample, which was a composite sample of the soil waste, was collected for laboratory analysis (DRO, GRO, TCLP-Lead, and TCLP-Benzene) to be used by the landfill for waste disposal characterization. Upon completion, the monitoring wells were properly developed.

### **Geoprobe Project**

On March 1, 2018, Geiss Soil & Samples, LLC of Merrill, Wisconsin conducted a Geoprobe project under the direction and supervision of METCO personnel. During the Geoprobe project six Geoprobe borings (G-23 through G-28) were completed to 12 feet bgs. During the Geoprobe project, eighteen soil samples were collected for field (PID) and laboratory analysis (PVOC, Naphthalene, PAH, and Lead). Upon completion, the Geoprobe borings were properly abandoned.

### **Groundwater Monitoring**

On March 29, 2018, METCO collected groundwater samples from the six monitoring wells (MW-1 through MW-6) for laboratory analysis (VOC, PAH, Lead, Nitrate/Nitrite, Dissolved Iron, and Dissolved Manganese). Field measurements for water level, Dissolved Oxygen, pH, ORP, temperature, and Specific Conductivity were collected from all sampled monitoring wells. During the groundwater sampling, Faurbach Surveying & Engineering of Hillsboro, Wisconsin surveyed the monitoring wells to feet mean sea level (msl).

On June 14, 2018, METCO collected groundwater samples from the six monitoring wells (MW-1 through MW-6) for laboratory analysis (PVOC, PAH, and Lead). Field measurements for water

level, Dissolved Oxygen, pH, ORP, temperature, and Specific Conductivity were collected from all sampled monitoring wells.

### **Investigative Waste Disposal**

On May 21, 2018, DKS Transport Services, LLC of Menomonie, Wisconsin picked up and disposed of twelve drums of soil cuttings at the Advanced Disposal – Seven Mile Creek Landfill in Eau Claire, Wisconsin.

### **Soil Analytical Results**

### **Groundwater Monitoring Results**

Monitoring Well MW-1: Currently shows no detects for PVOC and PAH.

Monitoring Well MW-2: Currently shows no detects for PVOC and PAH.

Monitoring Well MW-3: Currently shows no detects for PVOC and PAH.

Monitoring Well MW-4: Currently shows no detects for PVOC. The results currently show several low level detects for PAH compounds, but no exceedances. NR140 PAL exceedances were noted for Benzo(a)pyrene (0.0213 ppb), Benzo(b)fluoranthene (0.034 ppb), Chrysene (0.0228 ppb) during the first sampling event.

Monitoring Well MW-5: Currently shows no detects for PVOC and Naphthalene.

Monitoring Well MW-6: Currently shows no detects for PVOC and Naphthalene.

### **Conclusions/Recommendations**

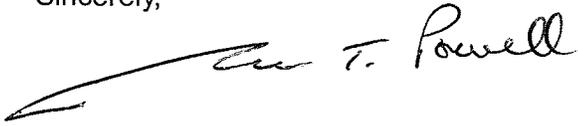

Based on the results of the investigation, METCO recommends that the Osceola Oil Bulk Plant (Former) site reviewed for closure for the following reasons: (1) The extent and degree of petroleum contamination in soil has been adequately defined. (2) Two very small areas of Direct Contact exceedances exist and could possibly be addressed via Cap Maintenance Plan. (3) No NR140 Enforcement Standard (ES) or Preventive Action Limits (PAL) exceedances in groundwater have been noted in the last sampling event. However, several NR140 Preventive Action Limits (PAL) exceedances were noted in the first groundwater sampling event. (4) There does not appear to be a vapor intrusion risk. (5) No municipal or private wells are known to exist within 1,200 feet of the source area. The Village of Milltown has two municipal water supply wells, which are located approximately 2,100 feet to the north-northeast of the subject property.

If the state concurs, please contact METCO to discuss closure activities and costs. However, if the Direct Contact exceedances need to be addressed via excavation prior to closure, please contact METCO to discuss the workscope and budget.

An Updated Site Layout Map, Groundwater Flow Maps (2), Soil Contamination Map, Data Tables, Waste Disposal Documents, Well Construction Forms, Well Development Forms, Soil Boring Logs, borehole abandonment forms, and Laboratory Documents have been attached.
