Subject: Request for Vapor Intrusion Investigation at 1404 S Webster Ave  
1404 South Webster Avenue, Village of Allouez, Wisconsin  
BRRTS # 02-05-514372

Dear Mrs. Amundson,

On November 6, 2019, the Wisconsin Department of Natural Resources (DNR) received soil and groundwater sampling results from a phase II environmental site assessment that was performed by AECOM at neighboring property 1324 S. Webster Avenue, Village of Allouez, Wisconsin. Based on these results, it is believed that groundwater contamination emanating from 1404 S. Webster Avenue (the site) has made its way past the northern property boundary of 1324 S. Webster Avenue. In response to these findings, the DNR is requesting that additional site investigation be performed both on-site, and at adjacent off-site properties.

Based on known groundwater and soil sampling results associated with the site, and screening criteria listed in RR-800, the DNR is requesting that a vapor intrusion (VI) investigation be performed at the following properties:

- 1410 S. Webster Avenue
- 1404 S. Webster Avenue
- 1324 S. Webster Avenue
- 930 Derby Lane
- 926 Derby Lane

The DNR is requesting that a site investigation workplan (SIWP) for the VI investigation be submitted by February 14, 2020. Please note that this investigation does not constitute a full site investigation (SI) for the site, but serves as a starting point for you to initiate necessary additional investigation, remediation, and potential interim actions.

We are hopeful that we can continue a dialog with you and your consultant to commence the VI investigation at the properties listed above. If you have any questions concerning the SIWP, please do not hesitate to contact me at 920-662-5424 or [josie.schultz@wisconsin.gov](mailto:josie.schultz@wisconsin.gov). Thank you for your attention to this matter.

Sincerely,

Josie Schultz  
Hydrogeologist
