Subject: 1404 S Webster Site Investigation 02-05-514372

Good Afternoon Scott & Andy,

Thank you for the conversation this afternoon to discuss the 1404 S Webster Site and what additional investigation is recommended prior to closure. I have summarized my recommendations below, based on my cursory review of the SIR:

- A conceptual site model (CSM) should be put together for the site.
- I recommend additional soil sampling, particularly in the shallow interval to delineate contamination at SB-3. Soil sampling should also be performed in any additional areas identified by the CSM.
- I recommend further off-site groundwater delineation as there is an ES exceedance right on the property line at MW-2.
- Historic analytical data from the Knothole Books Site, BRRTS # 03-05-002199, should be included in future submittals.
- 1324 S Webster delineated the detections of CVOCs at SB-102 and SB-104, and these results are included in the 3/3/2020 AC 99 tracked to the Village of Allouez Site, BRRTS # 07-05-585202. These results should also be included in future submittals.
- An emerging contaminant scoping statement needs to be submitted for the site.

A supplemental site investigation workplan (SIWP) should be submitted prior to performing the recommended additional investigation. If you would like a formal review with approval letter provided, I recommend the SIWP be submitted with a fee for DNR review.

Please let me know if you would like to discuss anything further.

Thank you,
Josie
