Re: Project Update Report
Former Robinsons Cleaners
1036 4th Street
Beloit, Wisconsin 53511
BRRTS# 02-54-515602

Dear Mr. Ackerman:

EnviroForensics, LLC (EnviroForensics) is pleased to submit this project update for the former Robinsons Cleaners located at 1036 4th Street in Beloit, Wisconsin. The purpose of this report is to provide the Wisconsin Department of Natural Resources with a comprehensive investigation and post-remediation monitoring data set for decision-making purposes.

A Remediation Site Operation, Maintenance, Monitoring and Optimization Report submitted on January 18, 2022 provided a summary of the soil vapor extraction (SVE) remedial action. This report focuses on monitoring that was completed during and after remediation to evaluate the magnitude and extents of contamination as well as exposure risk. Recent groundwater and vapor intrusion monitoring data collected since the SVE system was shut down on October 29, 2021 are included herein.

Groundwater Monitoring and Plume Dynamics

The direction of groundwater flow has been consistent over the course of the site investigation and remediation monitoring periods beginning in 2010. The consistency is demonstrated on **Figures 1 and 2,** which show water table contours in September 2013 and July 2022, respectively, approximately nine years apart. The indicated flow direction on both dates is south-southeast.

Cumulative groundwater monitoring data are summarized in **Table 1**, concentration trend charts for several monitoring wells are presented in **Attachment 1**. Laboratory reports associated with groundwater samples collected since submittal of the *Site Investigation Report*

in 2014 are presented in **Attachement 2**. As can be seen in the summary table and charts, the overall magnitude of impacts in groundwater has decreased substantially since the beginning of the investigation (2004). Tetrachloroethene (PCE) is the primary contaminant of concern, and the only compound detected at concentrations above its enforcement standard (ES) for the past four monitoring events. Definitive decreasing trends are evident in downgradient wells MW-1, MW-8, MW-14, and MW-15, and all other wells exhibit stable to decreasing concentrations.

The existing groundwater monitoring network, consisting of 14 water table monitoring wells and two (2) piezometers, was completed in 2013. **Figure 3** illustrates the change in plume extent between 2013 and 2022. The extent of PCE impacts in groundwater initially extended to at least MW-21, approximately 525 feet downgradient of the soil source near the southwest corner of the building. The extent of impacts now appears to be less than half that distance based on the non-detect results at well MW-14 for the past four (4) consecutive monitoring events. The contracting plume may be a beneficial effect of groundwater removal by the SVE system, which sent over 175,000 gallons of groundwater to the storm sewer (under WPDES permit) between September 2019 and October 2021.

Vapor Impacts

Figure 4 and **Table 2** have been prepared to summarize and illustrate analytical results and PCE concentration changes in samples collected from several monitoring points in the site building. Three (3) initial samples collected in 2010 indicated high concentrations of PCE, well above 100,000 micrograms per cubic meter ($\mu g/m^3$). Vapor conditions were tested again in 2013 and concentrations remained high.

Three (3) permanent Vapor Pin® sample points were installed in January 2020, and vapor samples were collected to evaluate the potential change in conditions as a result of remediation. At that point, the SVE system had operated for 1,834 hours. PCE concentrations were significantly less than pre-remediation values but still above the vapor risk screening level (VRSL) for small commercial buildings. The SVE system was restarted and operated intermittently through October 2021, attaining a final run time of 7,269 hours.

Two (2) post-remediation vapor sampling events were subsequently completed, in early March and June 2022, respectively. As can be seen in **Table 2**, the concentrations of PCE and trichloroethene (TCE) were below their small commercial VRSLs in all samples collected in 2022. Laboratory reports are provided in **Attachment 3**.

Emerging Contaminant Evaluation

Per Wis Admin. Code § NR 716.07 and Wis. Admin. Code § NR 716.09, site investigation scoping should include evaluating potential emerging contaminants that were historically or are presently produced, used, handled, or stored at a site. Most notably, emerging contaminants include 1,4-dioxane and per- and poly-fluorinated alkyl substances (PFAS). The evaluation includes any available information on the use of any products containing these chemicals in any services process; the duration of the suspected chemical product use; the type of chemical contained in the product; and any areas of a site where products containing these chemicals may have been used, stored, managed, or discarded.

According to documents prepared by the U.S. Environmental Protection Agency, several State Regulatory Agencies, the Department of Defense, and various other sources of toxic chemical information, dioxane is typically used by industry as a catalytic solvent during the manufacturing of adhesives, resins, oils, waxes, pharmaceuticals, and certain plastics and rubbers. It is also used to stabilize chlorinated hydrocarbons when being transported in aluminum containers. Dioxane is also a known byproduct of the production of polyethylene terephthalate (PET) plastic.

PFAS are ubiquitous in the environment and occur in many common everyday products such as Teflon® coatings, fast food wrappers and popcorn bags, stain and water repellents, some cosmetics, some insect repellents, and some sunscreen products, to name a few. In the 1940s, the manufacturing of these products incorporated PFAS due to their inherent hydrophobic (water repellent) and non-stick properties. PFAS are also components of fire-fighting foams.

The site was purchased by RayChris, Inc. on April 3, 1981, from the estate of Arthur R. Furman. RayChris operated the Site as an active dry cleaning facility until 1990, at which time it was sold to Robin Inc. and converted to a customer service location for garments dry cleaned elsewhere. The property was sold in late 2006 and was unoccupied until approximately 2009. From 2009 to 2013, the east (office) portion of the building was occupied by a printing/copying business, and the remaining portion of the building was used primarily as a warehouse. Since 2014, the building has been occupied by a fabricator that produces metal guarding for industrial machinery.

There is no history of manufacturing, and no reason to suspect 1,4-dioxane would have been used, stored, or discarded at the site. The dry cleaning industry has been identified as a potential contributor to PFAS contamination because of suspected PFAS accumulation in dry cleaning waste. Our research of waterproofing/ stain repellent products used at other dry cleaner sites indicates that many of the commonly used products didn't contain PFAS compounds.

Considering the Site history and limited operations, the release of PFAS to the subsurface is unlikely. As such, no further evaluation or sampling assessments are recommended.

Conclusions and Recommendations

Concentrations of PCE in groundwater on the Site are stable to decreasing, and concentrations in downgradient wells show a clear decreasing trend. The PCE plume in groundwater is shrinking as indicated by data from the past four (4) consecutive monitoring events. The magnitude of residual groundwater impacts is relatively low, and shallow groundwater is not used as a resource for potable water. No further groundwater monitoring or remediation appears warranted.

Sub-slab vapor concentrations beneath the site building have decreased by two to four orders-of-magnitude since the beginning of the investigation and prior to the SVE remedial action. Recent sampling results, including the results of samples collected during winter heating conditions, indicated concentrations of the contaminants of concern are now below VRSLs for small commercial settings.

As described in previous documents, off-site structures positioned above the pre-remediation groundwater plume were also assessed for vapor intrusion risk and ruled-out by sampling. These properties were 142 Merrill Avenue (residential), and Beloit Body and Fender (small commercial) located at 958 4th Street. EnviroForensics attempted to gain access to the Autozone property (1004 North 4th Street); however, access was not obtained after several communications with property representatives. Off-Site vapor intrusion assessment results are illustrated on **Figure 5**.

Impacts to soil were also reported in previous documents. PCE was the only compound of concern detected in soil beneath and surrounding the Site building. The PCE concentrations in all soil samples collected during the investigation were less than the current non-industrial direct-contact residual contaminant level. Soil impacts are illustrated on **Figure 6**, included herein for reference.

The magnitude and extents of contamination in all media have been defined, remedial actions have been completed, and routes of exposure to residual contamination have been evaluated. EnviroForensics believes pursuing case closure is appropriate at this time. Continuing obligations related to maintenance of a cap over residual soil contamination is anticipated for closure.

Monitoring well MW-16 was covered and presumably destroyed when the former Beloit Service Garage property at 1003 4th Street was redeveloped into an O'Reilly Auto Parts store. This well historically exhibited PCE concentrations above the PAL but below the ES. MW-16 will be identified as a missing monitoring well in the case closure request.

If you have any questions/comments regarding this report or our planned future activities, please feel free to contact me at 414-326-4412.

Sincerely,
EnviroForensics LLC

Brian Kappen P.G.
Senior Geologist

Notes:

All concentrations reported in units of micrograms per liter (µg/L)
Samples analyzed using EPA SW-846 Method 8260
J = Approximate value; result is less than the reporting limit but greater than or equal to the method detection limit
ND = Not Detected over laboratory detection limits as reported in Shaw Environmental's 2010 Summary Letter
NE = No standard established
PNR = Parameter Not Reported as read from Shaw Environmental's 2010 Summary Letter
VOCs = Volatile Organic Compounds
** = Chloroform detected in sample
Bolded values are above detection limits
Bolded and blue shaded values are above Public Health Preventive Action Limits
Bolded and orange shaded values are above Public Health Enforcement Standards
Petroleum VOCs are not related to the breakdown of PCE and are not subject to cleanup by Robinson Cleaners

Notes:

All concentrations reported in units in micrograms per cubic meter (µg/m3)

Soil Vapor Extraction (SVE) Remediaton Status indicates hours of system operation since initial start up

Bolded and shaded values exceed WDNR Small Commercial Vapor Risk Screening Levels as defined in Publication RR-800

Bolded values are above detection limits

NL = No screening level established

NA = Not Analyzed

Compounds unrelated to the breakdown of PCE are not subject to cleanup by Robinson's Cleaners.

Sub-Slab Vapor		
Analyte (ug/m³)	Residential Vapor Risk Screening Level	Small Commercial Vapor Risk Screening Level
PCE	**1,400**	**5,800**
TCE	**70**	**290**

Note:
1. Bolded and shaded values exceed Vapor Risk Screening Levels
2. All results reported in micrograms per cubic meter (ug/m³)
3. NE = Not established
4. PCE = Tetrachloroethene
5. TCE = Trichloroethene
6. Only compounds PCE and TCE are shown
7. SVE system operation began September 4, 2019. "Active Remediation" vapor samples were collected after 1,827 hours of operation; post-remediation samples were collected after 7,262 hours of operation

Sub-slab vapor		
Analyte (ug/m3)	Residential Vapor Risk Screening Level	Small Commercial Vapor Risk Screening Level [1]
PCE	**1,400**	**5,800**
TCE	**70**	**290**

Note:
1. All results reported in micrograms per cubic meter (ug/m3)
2. 1 = Vapor risk screening level = US EPA Regional Screening Levels with an attenuation factor of 0.1 for sub-slab vapor to indoor air, and a 0.1 adjustment for carcinogens as described in WDNR Publication RR-800
3. PCE = Tetrachloroethene
4. TCE = Trichloroethene
5. Only compounds PCE and TCE are shown

Indoor Air		
Analyte (ug/m^3)	Residential Vapor Action Level	Small Commercial Vapor Action Level
PCE	**42**	**180**
TCE	**2.1**	**8.8**

Note:
1. Bold values equal or exceed laboratory detection limits
2. Results reported in micrograms per cubic meter (ug/m^3)
3. PCE = Tetrachloroethene
4. TCE = Trichloroethene

Estimated extent of PCE concentrations above the enforcement standard based on July 2022 data

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
4	The continuing calibration standard not within established limits.
8	Closing calibration standard not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
23	Area percent recovery less than 50%.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

EnvisionAir Project Number: 2020-22
Client Project Name: 6154

Dear Mr. Kappen,

Please find the attached analytical report for the samples received January 17, 2020. All test methods performed were fully compliant with local, state, and federal EPA methods unless otherwise noted. The project was analyzed as requested on the enclosed chain of custody record. Please review the comments section for additional information about your results or Quality Control data.

Feel free to contact me if you have any questions or comments regarding your analytical report or service.

Thank you for your business. EnvisionAir looks forward to working with you on your next project.

Yours Sincerely,

Stanley A Hunnicutt

EnvisionAir Project Number: 2022-177
Client Project Name: 6154 – Beloit Robinsons

Dear Mr. Kappen,

Please find the attached analytical report for the samples received March 4, 2022. All test methods performed were fully compliant with local, state, and federal EPA methods unless otherwise noted. The project was analyzed as requested on the enclosed chain of custody record. Please review the comments section for additional information about your results or Quality Control data.

Feel free to contact me if you have any questions or comments regarding your analytical report or service.

Thank you for your business. EnvisionAir looks forward to working with you on your next project.

Yours Sincerely,

David Norris
