**Subject:**

Update Report  
Pioneer Bank – Former Texaco Station  
701 South Central Avenue  
Marshfield, WI, 54449  
BRRTS #03-72-521604  
PECFA #54449-4106-01

**Dear Mr. Thompson:**

On behalf of Mr. Pat Schreiner, REI Engineering, Inc. (REI) hereby submits one (1) copy of the above referenced report. REI has completed the approved scope of services which included three (3) additional rounds of groundwater monitoring, resurveying the well network to verify groundwater flow direction, update and inclusion of historical data to the summary tables. Based on current site conditions, REI recommends submitting the site for case closure consideration.

If you have any questions and/or require additional information, please contact our office at (715) 675-9784 or via email at [bbailey@reiengineering.com](mailto:bbailey@reiengineering.com).

Sincerely,  
REI Engineering, Inc.

A handwritten signature in black ink, appearing to read "Brian J. Bailey".

Brian J. Bailey  
Environmental Scientist

**REI PROJECT #5403**

### **1.0 INTRODUCTION**

#### **1.1 Purpose**

The Pioneer Bank – Former Texaco Station property is located at 701 South Central Avenue in the NW ¼ of the SW ¼ of Section 08, Township 25 North, Range 03 East, City of Marshfield, Wood County, Wisconsin (Figure 1). WTM coordinates of the site are 505940/465328. Figure 2 presents the site layout. This report summarizes the results of a limited scope of services. The approved scope of services included a resurvey of the existing monitoring well network, three (3) rounds of groundwater sampling, updating historic data to current standards, followed by an update report.

### **2.0 SUMMARY OF ACTIVITIES**

#### **2.1 Monitoring Well Sampling Results**

REI personnel were on site to sample the well network on April 26, July 19, and October 18, 2018. Depth to water was measured in all remaining wells and is presented in Table 1. The existing monitoring well network was resurveyed on April 26, 2018 and top of casing elevations are recorded in Table 1. Low flow sampling technology was employed for the sampling of the entire well network. Once groundwater demonstrated stability (using a YSI multiparameter field meter and flow cell), a sample was collected in laboratory prepared vials. All purge water was containerized for disposal at the City of Wausau wastewater treatment facility.

Groundwater samples were collected and submitted to a State certified laboratory for chemical analysis of petroleum volatile organic compounds and naphthalene (PVOC+N). Copies of complete laboratory analytical reports are presented in Appendix A.

The results of the REI groundwater sampling events and the historical groundwater sampling events are summarized in Tables 2a-m. Groundwater sample results document residual groundwater contamination in concentrations exceeding the NR 140.10 Groundwater Quality Enforcement Standards (ES) at sample locations MW4 and MW5. MW5 demonstrated a slight increasing trend in petroleum compounds which is likely a function of increased groundwater elevations (down gradient of source area).

Time verse concentration plots were prepared for MW1, MW2, MW4 and MW5 for benzene. This series of monitoring wells have documented impact historically. Each of these plots revealed reducing or relatively stable trends over time. Copies of the time verse concentration plots are presented in Appendix B.

Figures 3, 4 and 5 present groundwater contour maps from the data collected on April 26, July 19, and October 18, 2018, respectively. Groundwater flow direction documents flow that may be radially into the subject property. This is due to the presence of a utility corridor that is acting as an interceptor for shallow groundwater flow. Notes contained in the WDNR project file indicate that the water table slopes towards the utility trenches to the northeast and northwest of the site.

## 2.2 Monitoring Well Abandonment

The property directly to the south of the Pioneer Bank property with site address 725 South Central Avenue, Marshfield, WI underwent redevelopment beginning in late fall of 2017, which continued into 2018. During the July 19, 2018 sampling event, REI discovered that MW10 was missing and was likely removed during the ongoing building construction project. On August 1, 2018, REI notified WDNR Project Manager regarding the missing well.

REI later received well abandonment form from the contractor (DKS Construction Service, Inc.) and it was confirmed that they removed/abandoned the well. The WDNR Project Manager responded on September 5, 2018 and recommended REI complete the approved scope of work without MW10 and forego replacement of that well. The well abandonment form is included as Appendix C.

### **3.0 CONCLUSION & RECOMMENDATION**

The presence of petroleum contaminated groundwater exists in connection with the historic release at the subject property. Based on the groundwater analytical data, there has been a reduction in the petroleum compounds with generally decreasing/stable trends across the site. The three (3) additional sampling events collected with this scope of services in 2018 confirmed that condition. The degree and extent of contamination has been defined and significant migration has not been identified over the life of the investigation. Additionally, sub-slab vapor analytical sample results collected in August 2013 and January 2018 document that a vapor risk is not present at the subject property (Table 3). REI recommends submitting the Pioneer Bank / Former Texaco Station for case closure consideration.

## **APPENDIX A**

### **GROUNDWATER LABORATORY ANALYTICAL REPORT**

May 02, 2018

Brian Bailey  
REI Engineering  
4080 North 20th Ave  
Wausau, WI 54401

RE: Project: 5403 PIONEER BANK  
Pace Project No.: 40168231

Dear Brian Bailey:

Enclosed are the analytical results for sample(s) received by the laboratory on April 28, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten  
brian.basten@pacelabs.com

## QUALIFIERS

Project: 5403 PIONEER BANK  
Pace Project No.: 40168231

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 5403 PIONEER BANK  
Pace Project No.: 40172805

Dear Brian Bailey:

Enclosed are the analytical results for sample(s) received by the laboratory on July 20, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

## QUALIFIERS

Project: 5403 PIONEER BANK  
Pace Project No.: 40172805

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 5403 PIONEER BANK  
Pace Project No.: 40178116

Dear Brian Bailey:

Enclosed are the analytical results for sample(s) received by the laboratory on October 20, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Brian Basten

## QUALIFIERS

Project: 5403 PIONEER BANK  
Pace Project No.: 40178116

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
