Subject: Band Box Cleaners (Tomah) – Vapor Sampling and Groundwater Monitoring Report

Dear Ms. Keenan,

Enclosed is the report for the Band Box Cleaners site located in Tomah, Wisconsin. **This completes the workscope approved by the WDNR on July 31, 2012.**

Indoor Air Sampling

On June 18-19, 2013, indoor air samples were collected from the first floor of the Tattoo Parlor (IA-1) at 1120 Superior Avenue and from the crawl space beneath A Wild Hair Solon (IA-2) at 1202 Superior Avenue. The air samples were collected using a Suma canister with a flow regulator that allowed the air sample to be collected over a 24-hour period for VOC analysis.

The Tattoo Parlor building had no basement and the building was constructed on an on-grade concrete slab. Odors of cigarette smoke and incense were noted in the Tattoo Parlor building.

The crawl space beneath A Wild Hair Solon extended approximately 3 feet beneath the first floor and was constructed with concrete walls and a dirt floor. The crawl space could only be accessed through the basement of the adjacent building at 1200 Superior Street. Nothing was noted in this area that could have affected the vapor sampling results.

Indoor Air Sampling Results

The indoor air sampling results for the Tattoo Parlor at 1120 Superior Avenue (IA-1) showed residential air standard exceedances on the first floor for 1,3-Butadiene (1.05 ug/m^3) and Benzene (7.14 ug/m^3). Odors of cigarette smoke and incense were noted in the Tattoo Parlor building, which may have affected the sampling results.

The indoor air sampling results for A Wild Hair Salon at 1202 Superior Street (IA-2) showed several VOC detects, but none exceeded the residential air standards.

The indoor air sampling results are summarized in the attached data table.

Sub Slab Vapor Sampling

On June 18, 2013, Braun Intertec of La Crosse, Wisconsin installed two sub-slab vapor sampling ports in the Band Box Cleaners building at 1215 Superior Avenue (SS-4 and SS-5). Braun Intertec also installed sub-slab vapor sampling ports in six other nearby buildings including Hardware Hank at 1118 Superior Avenue (SS-1), The Trophy Place at 1204 Superior Avenue (SS-2), Associated Accounting Services at 1200 Superior Avenue (SS-3), Crow Bar at 1206 Superior Avenue (SS-6), Callahan's Pub at 1119 Superior Avenue (SS-7), and Franny's Bar at 1115 Superior Avenue (SS-8). The sub-slab vapor sampling ports were constructed by drilling a ½-inch pilot hole through the concrete slab and several inches into the sub slab material with a hammer drill. A 1½-inch outer hole was then drilled to depths ranging from ¾ -inch to 1-inch, depending on the concrete slab thickness. The holes were cleaned of dust and drilling debris using a shop-vac. Stainless steel tubing was cut to extend ¼ to ½ inch below the slab and connected to a Swagelok compression female adapter. Modeling clay was placed at the tubing/adapter joint, where the 1½-inch hole is reduced to a ½-inch hole. The remainder of the hole was concreted in, leaving the Swagelok adapter flush with the floor surface. A flush mounted plug was then screwed into the top of the Swagelok adapter for protection.

On June 18-19, 2013, Braun Intertec collected vapor samples from the sub-slab sampling ports for VOC analysis. Vapor samples were collected by screwing a male adapter with a short length of Teflon tubing into the sampling port. A Suma canister was connected to the other end of the Teflon tubing. The valve on the Suma canister was opened slightly and a vapor sample is slowly drawn in from the sampling port over a 5-minute time period. Prior to collecting the sub-slab vapor samples, the vapor sampling ports were checked for leaks using a helium shroud. Minor leaks were detected in sub-slab sampling ports SS-7 and SS-8. A crack in the concrete was noted near SS-7. The sub-slab soil vapor sampling results are summarized in the attached data table.

Sub Slab Vapor Sampling Results

The sub-slab vapor sampling results from the basement of Hardware Hank at 1118 Superior Avenue (SS-1) showed several VOC detects, but none exceeded the residential sub-slab vapor standards.

The sub-slab vapor sampling results from The Trophy Place (no basement) at 1204 Superior Avenue (SS-2) showed several VOC detects, but none exceeded the residential sub-slab vapor standards.

The sub-slab vapor sampling results from the basement of Associated Accounting Services at 1200 Superior Avenue (SS-3) showed several VOC detects, but none exceeded the residential sub-slab vapor standards.

The sub-slab vapor sampling results from the main level of Band Box Cleaners at 1215 Superior Avenue (SS-4) showed residential sub-slab vapor standard exceedances for Chloroform (94.6 ug/m^3) and PCE (47,000 ug/m^3).

The sub-slab vapor sampling results from the basement of Band Box Cleaners at 1215 Superior Avenue (SS-5) showed residential sub-slab vapor standard exceedances for Chloroform (114 ug/m^3), PCE (476,000 ug/m^3), and TCE (581 ug/m^3).

The sub-slab vapor sampling results from the basement of Crow Bar at 1206 Superior Avenue (SS-6) showed a residential sub-slab vapor standard exceedance for Chloroform (57.1 ug/m^3).

The sub-slab vapor sampling results from the basement of Gallahan's Bar at 1119 Superior Avenue (SS-7) showed several VOC detects, but none exceeded the residential sub-slab vapor standards.

The sub-slab vapor sampling results from the basement of Franny's Bar at 1115 Superior Avenue (SS-8) showed several VOC detects, but none exceeded the residential sub-slab vapor standards.

The sub slab air sampling results are summarized in the attached data tables.

Free Product

On June 18, 2013, METCO checked monitoring well MW-A-1 for free product. The absorbent sock had accumulated 36 inches of free product and an additional 3 inches was encountered when checked with the bailer. METCO removed approximately 0.27 gallons of free product by use of an absorbent sock and hand bailing. Free product levels and recovery are summarized in the attached free product recovery table.

On September 18, 2013, monitoring well MW-A-1 could not be located. The sidewalk in which the well existed had been replaced and it appears that the well was destroyed during the sidewalk replacement.

The free product is likely from one or more upgradient sources. The free product has a consistency of clean motor oil or hydraulic oil. Groundwater samples from MW-A-1 show no detects for VOC compounds and this product does not appear to be gasoline or diesel fuel. The state will need to determine if an investigation of the unknown free product will be required of the upgradient property owner or owners.

Groundwater Monitoring

On June 18, 2013, METCO collected groundwater samples from twenty-one of the monitoring wells (MW-12, MW-13, MW-14, MW-14P, MW-15, MW-16, MW-17, MW-17P, MW-18, MW-18P, MW-19, MW-19P, MW-A-1, MW-A-2, MW-A-3, MW-A-4, PZ-A-3, PZ-4-4, PZ-B-3, PZ-B-4, and PZ-1) for VOC, Dissolved Iron, Dissolved Manganese, TOC, COD, and Alkalinity analysis. Field measurements for DO, pH, ORP, Temperature, Specific Conductance and water levels were collected from all site wells. Monitoring well CMW-2 could not be located during the sampling event.

On September 18, 2013, METCO collected groundwater samples from twenty-one of the monitoring wells (CMW-2, MW-12, MW-13, MW-14, MW-14P, MW-15, MW-16, MW-17, MW-17P, MW-18, MW-18P, MW-19, MW-19P, MW-A-2, MW-A-3, MW-A-4, PZ-A-3, PZ-4-4, PZ-B-3, PZ-B-4, and PZ-1) for VOC, Dissolved Iron, Dissolved Manganese, TOC, COD, and Alkalinity analysis. Field measurements for DO, pH, ORP, Temperature, Specific Conductance and water levels were collected from all site wells. Monitoring well MW-A-1 could not be located during the sampling event and appears to have been destroyed during sidewalk construction.

Groundwater Monitoring Results

Monitoring well MW-A-2 currently shows an ES exceedance for PCE (7.7 ppb). The PCE levels in MW-A-2 appear to be decreasing.

Piezometer well PZ-A-3 currently shows a NR140 ES exceedance for Benzene (261 ppb) and NR140 PAL exceedances for Ethylbenzene (370 ppb), Naphthalene (43 ppb), Trimethylbenzene (212 ppb), and Xylene (656 ppb). There were no detects for PCE or TCE and the PVOC's and Naphthalene detected in PZ-A-3 can be attributed to a petroleum release at the Badger Cafe LUST site.

Piezometer well PZ-B-3 currently shows a NR140 ES exceedance for PCE (13.7) and a NR140 PAL exceedance for Benzene (1.36 ppb). The PVOC's detected in PZ-B-3 can be attributed to a petroleum release at the Badger Cafe LUST site.

Monitoring well CMW-2 currently shows NR140 PAL exceedances for Ethylbenzene (330 ppb), Naphthalene (28 ppb), Trimethylbenzene (318 ppb), and Xylene (872 ppb). There were no detects for PCE or TCE and the PVOC's and Naphthalene detected in CMW-2 can be attributed to a petroleum release at the Badger Cafe LUST site.

Monitoring well MW-14 currently shows an ES exceedance for PCE (218 ppb) and a PAL exceedance for TCE (0.51 ppb). The PCE and TCE levels are the highest ever encountered in this well.

Piezometer well MW-14P currently shows an ES exceedance for PCE (1,240 ppb). The PCE levels in MW-14P appear to be decreasing.

Monitoring well MW-16 currently shows an ES exceedance for PCE (7.8 ppb) and a PAL exceedance for Chloroform (0.79 ppb). The contaminant levels in MW-16 appear to be decreasing.

Monitoring well MW-17 currently shows an ES exceedance for PCE (430 ppb). The PCE levels in MW-17 appear to be stable to decreasing.

Piezometer well PZ-1 currently shows NR140 PAL exceedances for Benzene (0.87 ppb) and Naphthalene (11.6 ppb). There were no detects for PCE or TCE and the PVOC's and Naphthalene detected in PZ-1 can be attributed to a petroleum release at the Badger Cafe LUST site.

Groundwater results are summarized in the attached data tables.

Conclusions/Recommendations

Exceedances of the residential indoor air standards for Benzene and 1,3-Butadiene were noted in the indoor air sample collected at the Tattoo Parlor (IA-1). However, odors of cigarette smoke and incense were noted in the building and cigarette smoke is a known source for both Benzene and 1,3-Butadiene. 1,3-Butadiene is also common in automobile exhaust. Because Benzene and 1,3-Butadiene are not used in the dry cleaning process and because of the potential for cross contamination of the indoor air sample, METCO does not believe this warrants further investigation.

The sub-slab vapor samples collected beneath the Band box building (SS-4 and SS-5) showed high levels of PCE and other chlorinated compounds. This area may require further investigation and/or remediation.

The only other sub-slab vapor sample to exceed the residential sub-slab vapor samples was SS-6, which was collected beneath the Crow Bar. This sample showed 57.1 ppb Chloroform, but should not likely require further investigation because Chloroform is a common laboratory cross-contaminant.

Based on the groundwater monitoring results, the extent and degree of chlorinated solvent contamination in groundwater has been adequately defined. The levels of chlorinated solvents in groundwater appear to be stable to decreasing with the exception of MW-14, which showed an increase in its PCE levels during the most recent groundwater sampling event. Because of this, the WDNR may require additional groundwater monitoring.

If the WDNR determines that further investigation and/or remediation is required, please contact METCO to discuss a workscope and budget. However, if the WDNR determines the Closure is a viable option at this time, please contact METCO for closure related costs.

An Updated Site Layout Map, Groundwater Flow Maps, Groundwater Isoconcentration Map, Vapor Intrusion Map, Data Tables, Vapor Sampling Notes, and Laboratory Documents have been attached.

Notes:
[1] The daily calibration verification standard did not meet the method specified criteria for Ethyl acetate. The percent difference in the relative response factors was 33.9%. The method requires +/-30%. There may be a high bias for this compound.
[3] The initial calibration failed for Acetone. One calibration level recovered at 76.5% (limits are 80-120%). There may be a bias.
[4] The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
[5] The laboratory control sample recovery is outside of laboratory control limits.
[6] See case narrative section for further information.
[7] One or more surrogate recoveries reported with this sample analysis are outside of the laboratory control limits.
[8] Compounds were tentatively identified by comparison to the NIST (NBS) database of mass spectra. These identifications represent the best fit obtained from the database search, subject to the interpretation of the analyst.
[9] Concentrations are estimated values calculated relative to the closest eluting internal standard using peak areas from the total ion chromatogram and a relative response factor of one.
[10] The reported value for the unknown analyte is based on a molecular weight of 100 because the actual molecular weight is not known.
[11] The method reporting limit (MRL) was raised for one or more analytes; a dilution of the sample was necessary due to high analyte levels and/or matrix interferences.
ug/m³ = Micrograms per cubic meter.
< = Less than the reporting limit indicated in parentheses.
---- = Not analyzed or calculated for this parameter
[a] Criteria for mixture of o, m and p-xylenes.
Bold = detects
c = Carcinogen
Underline = Indoor Residential Air Standard Exceedance

Notes:

[2] The initial calibration failed to meet requirements for trans-1,2-Dichloroethene. This analyte was not detected in the sample.
[3] Compounds were tentatively identified by comparison to the NIST (NBS) database of mass spectra. These identifications represent the best fit obtained from the database search, subject to the interpretation of the analyst.
[4] Concentrations are estimated values calculated relative to the closest eluting internal standard using peak areas from the total ion chromatogram and a relative response factor of one.
[5] The reported value for the unknown analyte is based on a molecular weight of 100 because the actual molecular weight is not known.
[6] The method reporting limit (MRL) was raised for one or more analytes; a dilution of the sample was necessary due to high analyte levels and/or matrix interferences.
ug/m³ = Micrograms per cubic meter.
< = Less than the reporting limit indicated in parentheses.
---- = Not analyzed or calculated for this parameter
NE = Not Established

RE: Band Box Cleaners - Tomah
LC-12-03519

Dear Kevin Nestingen:

Braun Intertec Corporation received samples for the project identified above on June 21, 2013. Analytical results are summarized in the following report.

All routine quality assurance procedures were followed, unless otherwise noted.

We appreciate your decision to use Braun Intertec Corporation for this project. We are committed to being your vendor of choice to meet your analytical chemistry needs.

If you have any questions please contact me at the above phone number.

Sincerely,

Thomas P. Wagner

Qualifiers and Abbreviations

vm	The surrogate recovery is above the laboratory generated control limits.
vfa	The method reporting limit (MRL) was raised for one or more analytes; a dilution of the sample was necessary due to high analyte levels and/or matrix interferences.
tu	The reported value for the unknown analyte is based on a molecular weight of 100 because the actual molecular weight is not known.
tt	Concentrations are estimated values calculated relative to the closest eluting internal standard using peak areas from the total ion chromatogram and a relative response factor of one.
tic	Compounds were tentatively identified by comparison to the NIST (NBS) database of mass spectra. These identifications represent the best fit obtained from the database search, subject to the interpretation of the analyst.
qd	The initial calibration failed to meet requirements for trans-1,2-Dichloroethene. This analyte was not detected in the sample.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
COC	Chain of Custody
MRL	Method Reporting Limit
NA	Not Applicable
ND	Analyte NOT DETECTED
NR	Not Reported
%Rec	Percent Recovery
RPD	Relative Percent Difference
VOC	Volatile Organic Compound

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
2	Relative percent difference failed for laboratory spiked samples.
8	Closing calibration standard not within established limits.
29	Closing continuing calibration verification failed due to instrument carryover.

CWT denotes sub contract lab - Certification #445126660

ESC denotes sub contract lab - Certification #998093910

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
8	Closing calibration standard not within established limits.

CWT denotes sub contract lab - Certification #445126660

ESC denotes sub contract lab - Certification #998093910

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
