**Re: 2021 Remediation Progress Report for Murphy Oil Tank 68 Release Site  
Superior Refining Company LLC Refinery, Superior, WI  
WDNR BRRTS# 02-16-526812  
Facility ID: 816009590**

Dear John:

On behalf of Superior Refining Company LLC (SRC), Barr Engineering Co. (Barr) is submitting this remediation progress report for the Murphy Oil Tank 68 Basin release site (Tank 68) at the SRC refinery in Superior, Wisconsin. Periodic site progress reporting to the Wisconsin Department of Natural Resources (WDNR) is required pursuant to ss. NR 700.11(1) and 724.13(3), Wisconsin Administrative Code. This report summarizes monitoring activities conducted at the site in 2021.

## 1.0 Facility and Site Background Information

Figure 1 shows the location of Tank 68 within the refinery, the approximate property boundary of the refinery, and the area surrounding the refinery. Figure 2 presents the site layout of Tank 68 which is located in the SW ¼ of the SW ¼ of Section 25, Township 49 North, Range 14 West, Superior Township of Douglas County, Wisconsin.

The closest surface water to Tank 68 is Newton Creek, located approximately 2,000 feet east of the Tank 68 basin (Figure 1). The Tank 68 basin is located in the central area of the refinery which is relatively flat. The basin's ground surface is unpaved and is underlain by native clay. The average depth to groundwater in the Tank 68 monitoring wells is 3 to 4 feet below ground surface (bgs) depending on time of year. The regional groundwater flow direction below the refinery and across the Tank 68 site is toward the east (Figure 2).

As presented in the April 2014 Gannett Fleming, Inc. (GF) *Final Memorandum of Agreement, Site Investigation and Remedial Action Plan* (GF, 2014), the hydraulic conductivity of the native clay underlying the refinery is on the order of  $1 \times 10^{-7}$  centimeters per second (cm/sec). Assuming a horizontal hydraulic gradient of 0.003 feet per foot eastward and an effective porosity of 0.06, the estimated horizontal groundwater flow velocity at the refinery is approximately 0.01 foot per year (ft/yr) (GF, 2014).

In October 2011, Calumet Superior LLC (Calumet) acquired the refinery from Murphy Oil. In November 2017, Husky Superior Refining Holding Corp. (Husky Superior) purchased Calumet and changed its legal name to Superior Refining Company LLC. In January 2021, Husky and Cenovus Energy Inc. (Cenovus) merged to become Cenovus; however, the legal name of the refinery will remain unchanged.

## 2.0 Tank 68 Basin Release Site Investigation and Remediation Summary

The Tank 68 release is associated with historical contamination discovered during an investigation at the adjacent Tank 65-66 basin in 2004. The Tank 68 basin monitoring network currently includes monitoring wells MW-5/T66, MW-1/T68, MW-2/T68, and MW-4/T68, MW-5/T68, and MW-6/T68 and monitoring points MP-1/T68, MW-2/T68, MP-3/T68, as shown on Figure 2. In 2001, MW-5/T66 was transferred from the Tanks 65/66 release site to the Tank 68 basin site because of the occurrence of free product in MW-5/T66. The free product in MW-5/T66 was first observed in January 2000 during a site investigation associated with the Tanks 65/66 basin east of Tank 68. This location has not been associated with any known release. In 2008, upgradient monitoring well MW-3/T68 was sealed and abandoned. During the time period 2010 to 2012, test pit sump TP-1/T68 was lost (buried or removed).

Multiple phases of investigation have been completed at the site including soil borings and test pits and the installation of monitoring wells and points. Currently, long-term groundwater monitoring is being conducted at the site as well as product gauging and passive recovery. This report presents monitoring and product gauging data for 2021.

Research conducted by the American Petroleum Institute (API) and published in a 2004 document titled, "API Interactive LNAPL Guide, Version 2.0", found that periodic manual removal of product is most appropriate for low permeability aquifers (hydraulic conductivity  $< 1 \times 10^{-5}$  cm/sec). The hydraulic conductivity of the native clay underlying the refinery is on the order of  $1 \times 10^{-7}$  cm/sec, as described in the previous section of this letter report (GF, 2014).

Based on the recommendations included in the API Interactive LNAPL Guide document, product has been manually bailed when observed in a monitoring well. The API Interactive LNAPL Guide also states that product preferentially accumulates in wells when the potentiometric surface is low. This occurs because, as the potentiometric surface drops, product that remains above the water level will drain downward into the well. As the potentiometric surface rises, the product becomes submerged and trapped in the soil pores and subsequently will not accumulate in the well. To take advantage of this apparent pattern, the wells located in the basin were purged dry following each depth to product or groundwater measurement event to promote the accumulation of product.

Since February 2000, wells in the network have been routinely monitored for the presence of free product. Recovered product is sent through the refinery's No. 1 API oil/water separator. Separated oil is stored for use at the refinery. Separated and purged water is treated at the on-site wastewater treatment plant (WWTP).

As described in previous reports, measurable product has been encountered in the monitoring wells associated with the Tank 68 basin on multiple occasions. GF's April 2014 report includes a 15-page table summarizing the historical volume of product removed from each well (GF, 2014). Since recovery began, approximately 102 gallons of product have been recovered from the Tank 68 basin with almost all (i.e., over 97%) from MW-2/T68, MW-5/T66, and MW-6/T68 (GF, 2019). Since 2014, product has been limited to MW-5/T-66 and MW-5/T68. In each instance where product was measured in these wells, it was recovered through bailing. Product has not been encountered in MW-5/T66 since April 2019 and in MW-

5/T68 since November 2018 as seen on Table 1 in the 2020 remediation progress report submitted to the WDNR (Barr, 2021).

### **3.0 Remedial and Monitoring Activities in 2021**

Since the most recent remediation progress report was submitted to the WDNR on February 26, 2021 (Barr, 2021), work at Tank 68 has included the gauging of water and product levels in associated site monitoring wells and points, and the collection of groundwater samples from select locations.

Year-round access to monitoring wells and points at the refinery is not practical because of relatively shallow groundwater, cold weather, and snow. When conditions allow access, water and product levels are monitored monthly. If product is encountered, the product is removed and sent through the refinery's No. 1 API oil/water separator. Separated oil is stored for used at the refinery and the water is treated at the on-site WWTP.

Monitoring wells and points are gauged, purged and sampled in spring and fall (typically April/May and September/October). Monitoring wells and points are routinely checked for the presence of product and, if encountered, the product is removed from the well by bailing. Monitoring and sampling activities conducted in 2021 are summarized in Table 1.

#### **3.1 Product Recovery**

During this reporting period, measurable product was not encountered in the monitoring wells or monitoring points. As established in the 2019 report (GF, 2019), if free product is not observed during the April/May gauging event, the wells and points are then checked quarterly (rather than monthly) through the October sampling event.

SRC will continue to check for free product, but for all practical purposes, free product likely has been recovered to the extent practical from the Tank 68 basin.

#### **3.2 Groundwater Sampling and Results**

Groundwater samples were collected by Barr and Insight Environmental (Insight) field staff at the site during May and October 2021. Each well was purged dry twice and allowed to recover for at least 14 days between purge events and prior to the collection of the samples. Routine sampling of monitoring wells MW-1/T68, MW-2/T68, MW-4/T68, MW-5/T66, MW-5/T68, and MW-6/T68 was conducted on May 24, 2021 and October 4, 2021. Field staff used a new one-time-use polyethylene disposable bailer with new nylon rope to collect each groundwater sample. The May 2021 groundwater samples were sent to Pace Analytical (Pace) in Green Bay, Wisconsin (Wisconsin laboratory certification #405132750) and the October 2021 samples were sent to Pace in Minneapolis, Minnesota (Wisconsin laboratory certification #999407970). Groundwater samples were analyzed for volatile organic compounds (VOCs) using EPA Method 8260.

Table 2 presents the analytical results of the groundwater samples compared to the NR 140 Preventative Action Limits (PAL) and Enforcement Standards (ES). As shown in Table 2:

- There were no compounds detected above the laboratory method detection limits (MDLs) in samples collected from upgradient well MW-1/T68 during the May and October 2021 events.

- Samples collected from the other five Tank 68 monitoring wells in May and October 2021 contained one or more VOC at concentrations equal to or greater than NR 140 ESs. However, because of the recovery of product over the years, overall VOC concentrations in the wells have been stable or decreasing, as demonstrated by the benzene concentrations shown in Figure 3.
- Figure 3 presents trend analysis plots for benzene concentrations in groundwater samples from MW-2/T68, MW-4/T68, MW-5/T66, and MW-6/T68. If benzene was not detected in a sample collected from a well, then the reported MDL was plotted for that date. Note that, with one exception, the plotted data for each well only includes the time since measurable free product was most recently encountered during a sampling event; at MW-6/T68 "discontinuous globules" of product were observed in 2016 and data is plotted starting with October 2011. Best-fit exponential trend lines were generated using a scatter plot chart. As shown on Figure 3, dissolved-phase benzene concentrations have followed a general downward trend in MW-2/T68, MW-4/T68, MW-5/T66, and MW-6/T68. Based on the relatively low groundwater flow velocity of approximately 0.01 foot/year (GF, 2014) and decreasing benzene concentrations, results indicate the overall benzene concentration in groundwater in the referenced wells remains stable or has been decreasing for at least the last six years.
- The VOC compound chloroform had reported detections for the first time in the October 2021 samples: MW-5/T68 (18.4 ug/l) and MW-6/T68 (21.2 ug/l). The concentrations of chloroform in each sample exceeded the NR 140 140 ES of 6 ug/l; note that both concentrations were flagged by the laboratory as an estimated concentration between the limit of detection and the limit of quantitation.

Attachment A provides copies of the laboratory reports and chain of custody records for the groundwater samples collected in 2021.

Historically, a groundwater contour map for the Tank 68 release site has not been prepared because groundwater levels in the wells either are influenced by local surface/melt water in the spring or typically do not have sufficient time to reach static levels after they are purged dry later in the year. Consequently, a groundwater contour map representing static conditions for the Tank 68 site has not been created. However, the regional groundwater flow direction in the vicinity of the Tank 68 site is to the east (GF, 2014) (Figure 2).

## 4.0 Future Work

SRC's work plan for 2022 is as follows:

- Continue to check for, and if present, manually bail product, monthly (as conditions allow) from monitoring wells MW-5/T66 and MW-5/T68. If, however, product is not observed during the spring gauging event as was the case in 2019, 2020, and 2021, these wells will only be checked quarterly. Any purged product/water will continue to be separated and stored or sent through the refinery's No. 1 API oil/water separator and on-site WWTP.
- Discontinue monthly/quarterly product checks at the remaining four wells (MW-1/T68, MW-2/T68, MW-4/T68 and MW-6/T68) and three monitoring points (MP-1/T68, MP-2/T68, and MP-3/T68). If, however, product is observed during the spring gauging event, monthly monitoring of these locations will resume. If product is not observed, the wells and points will only be checked during the spring and fall sampling events.

- Collect biannual (spring and fall) groundwater samples from monitoring wells without product and have the samples analyzed for VOCs by a Wisconsin-certified laboratory using EPA Method 8260. Each monitoring well will be purged dry twice and allowed to recover for approximately 2 weeks prior to the collection of samples.

Feel free to contact Matt Turner at SRC and/or me if you have any comments, questions, or need additional information.

Sincerely,

BARR ENGINEERING CO.

Lynette M. Carney  
Project Manager

**NOTES:**

Detected concentrations at or above an applicable NR 140 PAL are in **bold** font; those at or above an NR 140 ES are in *italicized* font.

a = Estimated value, calculated using some or all values that are estimates.

BQX = Value exceeds PAL despite being classified as not detected. It is possible one or more of the compounds added together to derived this value were detected in the original sample.

DP = Discontinuous product globules, well not sampled.

FP = Free product, well not sampled.

GRO = Gasoline range organics.

a = Estimated value, calculated using some or all values that are estimates.

H = Recommended sample preservation, extraction or analysis holding time was exceeded.

J (Pre 2020) = Estimated concentration below laboratory quantitation level.

J (Post 2020) = Estimated detected value. Either certain QC criteria were not met or the concentration is between the laboratory's detection and quantitation limits.

MTBE = Methyl tert butyl ether.

na = Not analyzed.

NI = Not installed.

NR 140 ES = Wisconsin Administrative Code NR 140 Enforcement Standard; 7/1/2015.

NR 140 PAL = Wisconsin Administrative Code NR 140 Preventive Action Limit; 7/1/2015.

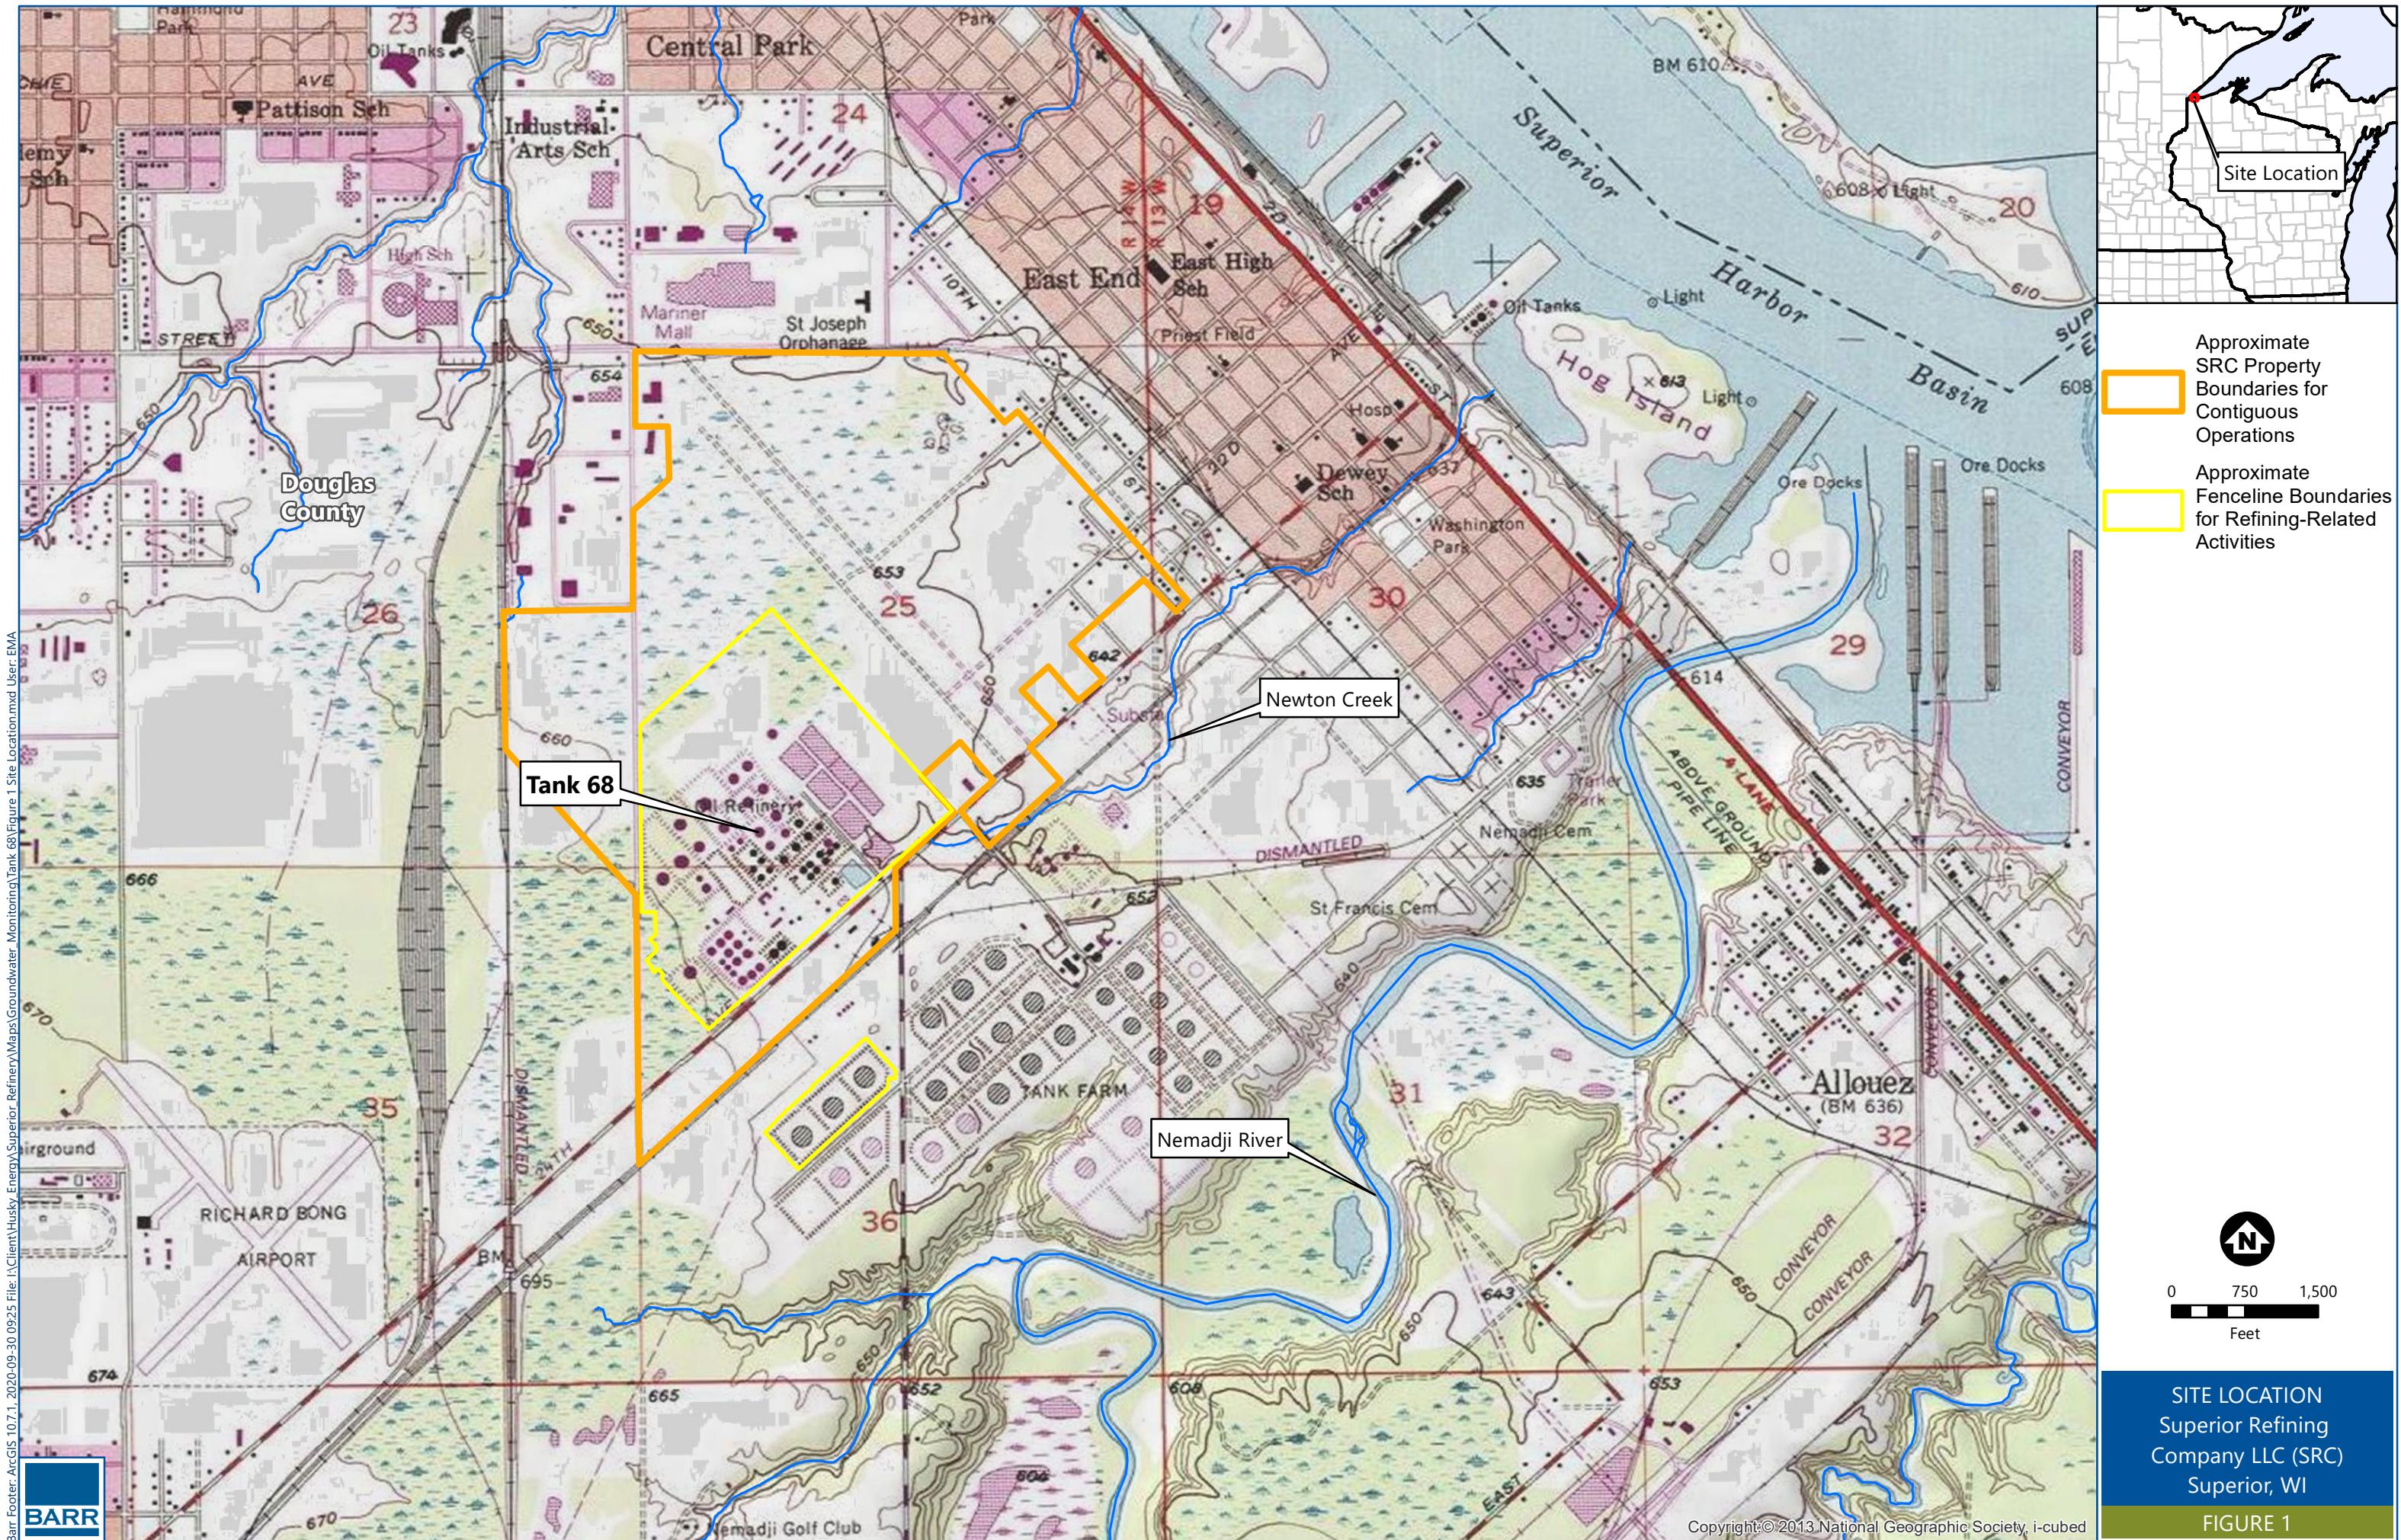

NS = No standard.

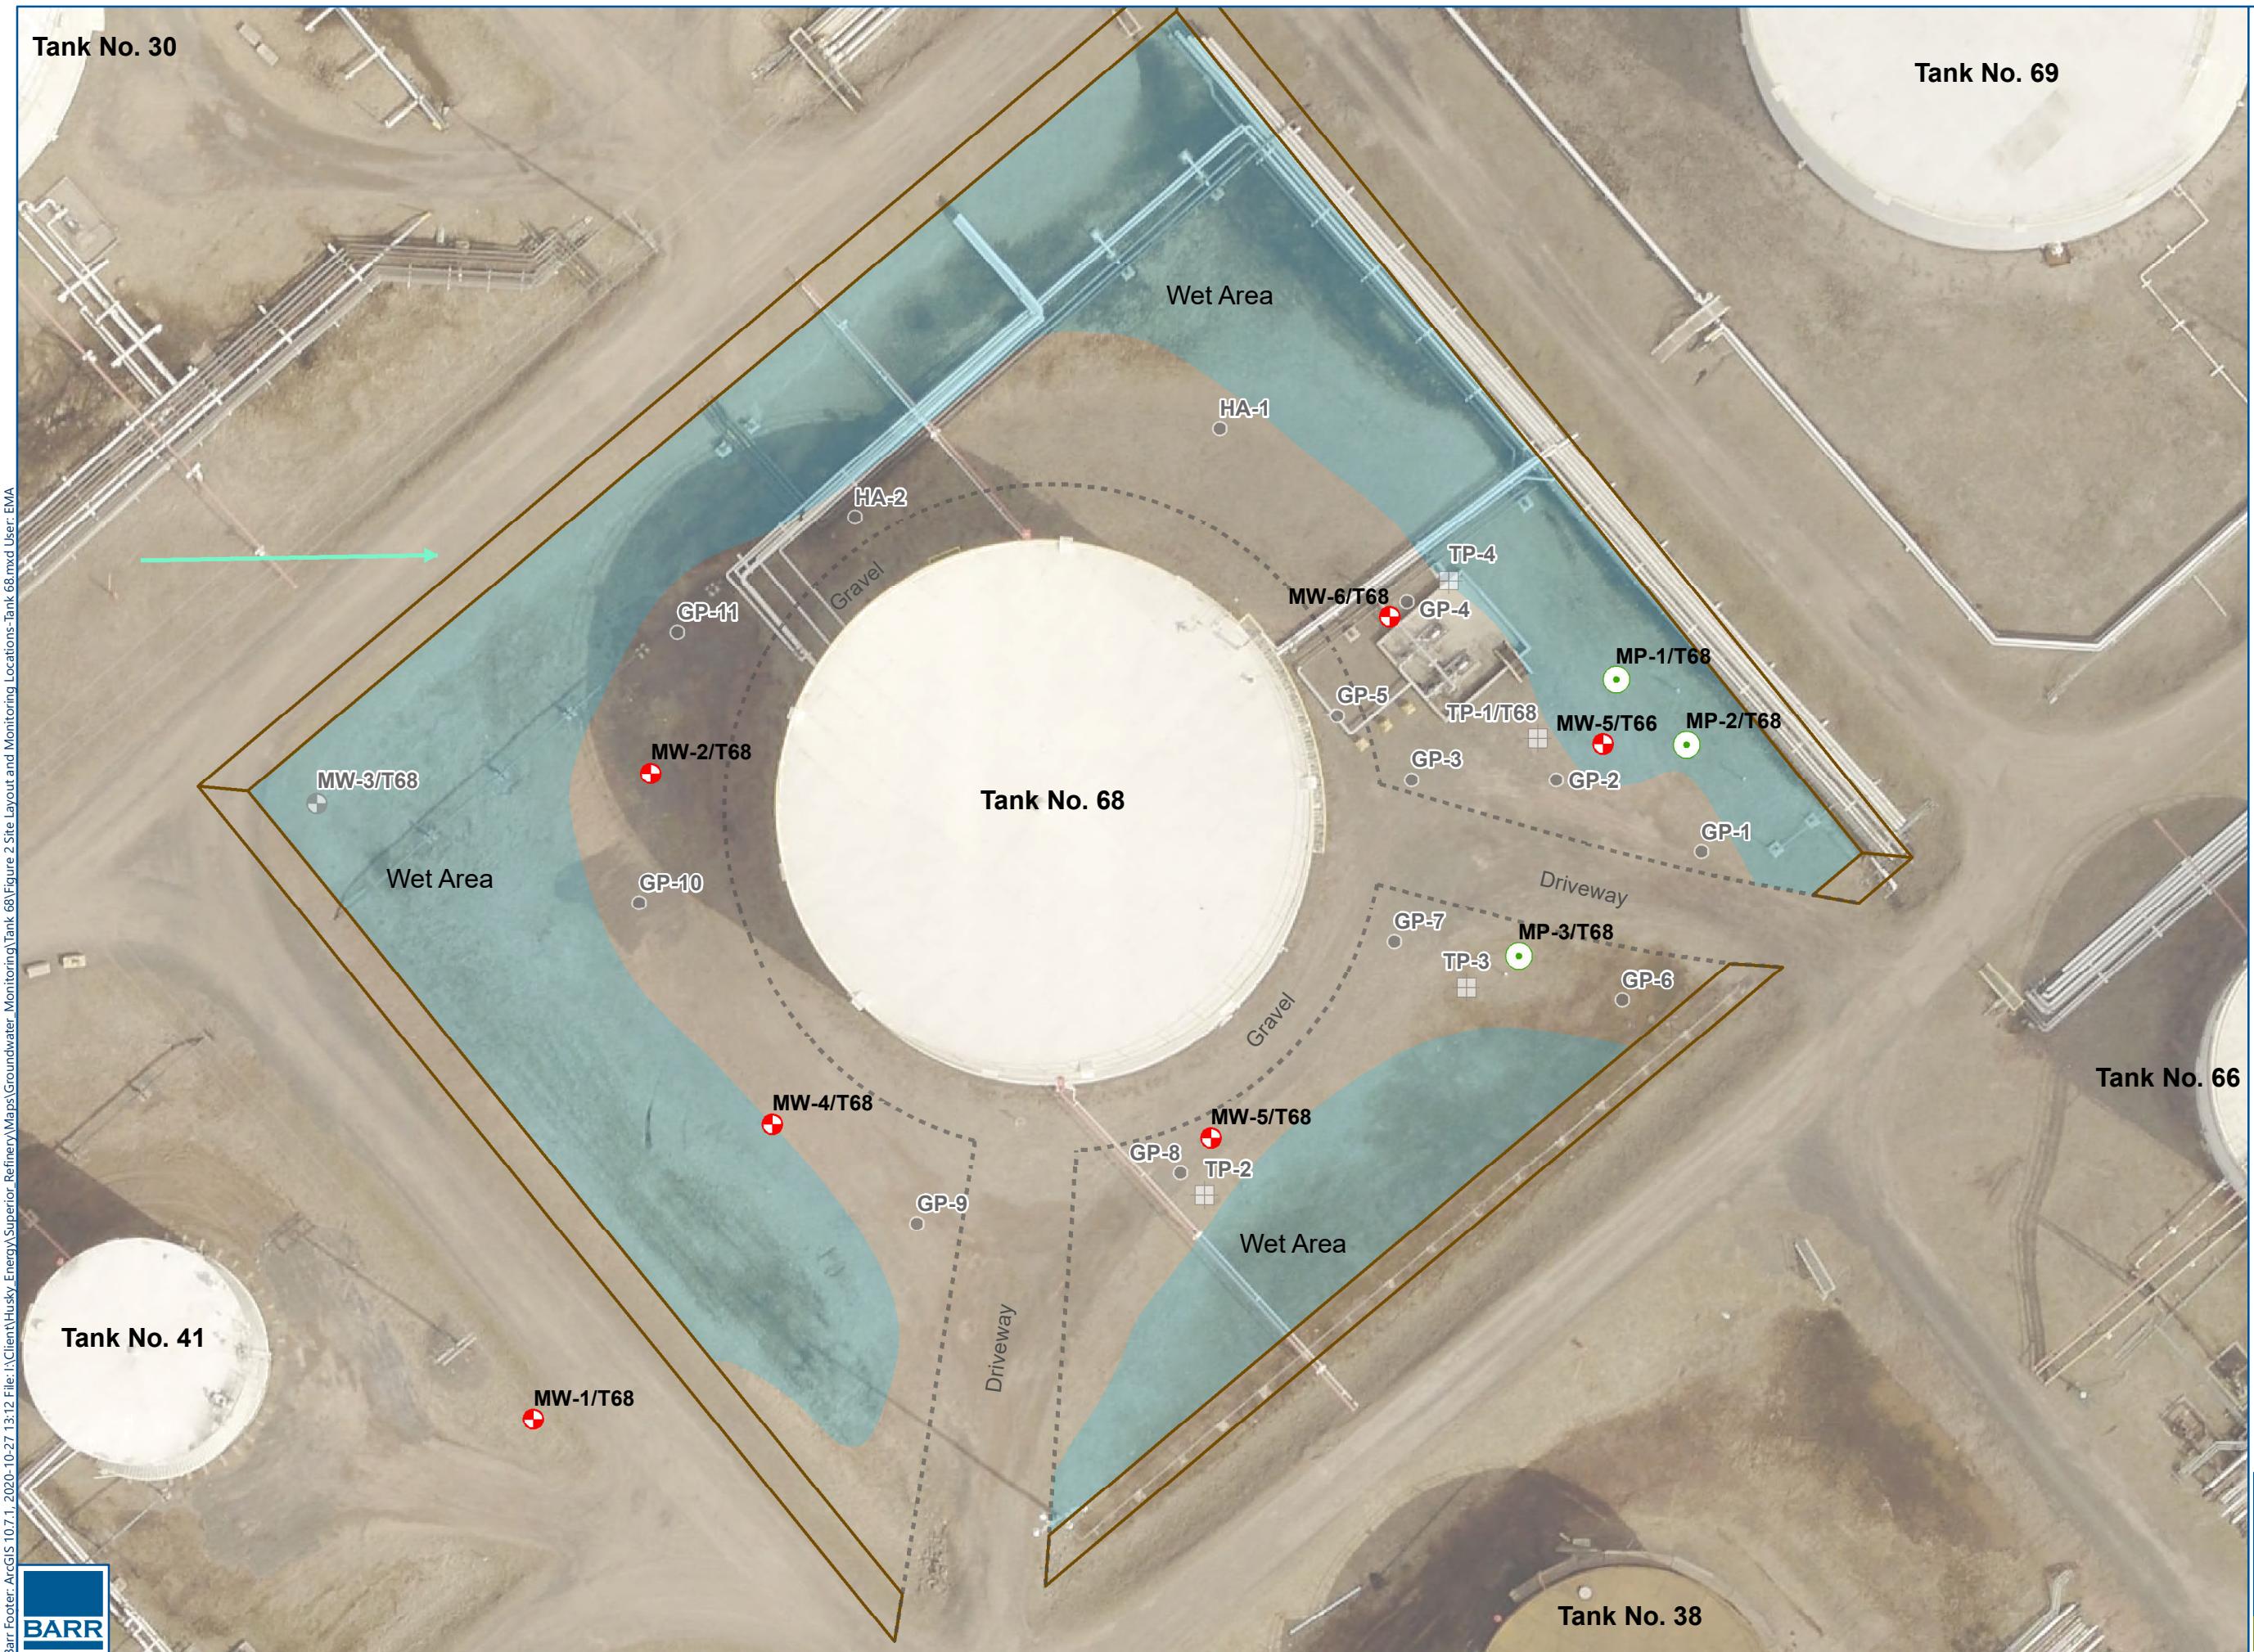

TMBS = Sum of 1,2,4-Trimethylbenzene and 1,3,5-Trimethylbenzene.

(1) In addition, 244 µg/l of 1,3-dichloropropane was detected in the sample collected from MW-5/T66 on 10/25/17. However, 1,3-dichloropropane has no NR 140 PAL or NR 140 ES. Consequently, Table 2 was not revised to include all 1,3-dichloropropane data.

(2) No data available.

RE: Project: 49161494 SRC GW Samp T68  
Pace Project No.: 10562224

Dear Jim Taraldsen:

Enclosed are the analytical results for sample(s) received by the laboratory on May 24, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Amanda Albrecht  
amanda.albrecht@pacelabs.com

## QUALIFIERS

Project: 49161494 SRC GW Samp T68

Pace Project No.: 10562224

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 49161494 SRC GW Sampling TK68  
Pace Project No.: 10581711

Dear Jim Taraldsen:

Enclosed are the analytical results for sample(s) received by the laboratory on October 05, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Minneapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Amanda Albrecht

## PROJECT NARRATIVE

Project: 49161494 SRC GW Sampling TK68

Pace Project No.: 10581711

---

Date: October 28, 2021

### Case Narrative

#### Volatile Organics Analysis

8260D

Three samples were analyzed within method holding time at an elevated dilution based on an evaluation of historical target analyte concentrations. After the analysis, it was determined that a number of analytes were not detected at the elevated dilution and could have been analyzed with a lower dilution factor. A second analysis, outside of the method recommended holding time, was performed and is reported for all applicable analytes.

MW-2/T68 was initially analyzed with a 100x dilution factor.

MW-4/T68 was initially analyzed with a 50x dilution factor.

MW-5/T66 was initially analyzed with a 200x dilution factor.

## QUALIFIERS

Project: 49161494 SRC GW Sampling TK68

Pace Project No.: 10581711

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 777217

- [1] The continuing calibration verification was below the method acceptance limit for chloromethane, bromomethane, chloroethane, and allyl chloride. The analyte was not detected in the associated samples and the sensitivity of the instrument was verified with a reporting limit check standard.

### ANALYTE QUALIFIERS

- D4 Sample was diluted due to the presence of high levels of target analytes.  
H1 Analysis conducted outside the recognized method holding time.  
M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.  
MN The reporting limit has been raised in accordance with Minnesota Statutes 4740.2100 Subpart 8. C, D. Reporting Limit Evaluation Rule.  
R1 RPD value was outside control limits.
