Subject: Cermatics, Inc. Request for Case Closure GIS Registry fees
10014 N. Wasaukee Road, Mequon, WI
WDNR FID#245046350 BRRTS#02-46-529481

Dear Mr. Luedtke:

The Department has sent you several letters requesting that you complete the necessary steps to obtain closure of the above-referenced site. The site and adjacent property are required to be placed on the Department's GIS Registry because of residual soil and groundwater contamination. The Department cannot complete the closure review or close out the site until the GIS Registry fees have been paid. The current database fees are \$350 for groundwater listing and \$300 for soil for a total of \$650. You may submit the fees directly to me at the letterhead address.

The Department has received documentation that the groundwater monitoring wells have been abandoned, so once we have received the GIS fees, we will be able to complete the case closure process for this case. As you know, the case closure will only apply to the chlorinated solvent contamination at the property and does not include the PCB contamination on the site which has not been sufficiently investigated or remediated.

The Department reminds you that you are obligated to complete the cleanup requirements for the chlorinated solvent contamination at this property. Please respond to me in writing within 15 days from the date of this letter to inform me of your intent to pay the GIS Registry fees and schedule for when you expect to comply. You may contact me at (414) 263-8533 if you have any questions regarding this letter. Failure to respond will result in my recommendation that we schedule an enforcement conference with you.

Sincerely,

Nancy D. Ryan, Hydrogeologist
Remediation and Redevelopment
