Work Order No. 02687-007-003

Re: Quarterly Groundwater Monitoring Report, Second Quarter 2000
Moss-American Site, Milwaukee, Wisconsin

Dear Mr. Hart:

On behalf of the Kerr-McGee Chemical LLC (KMC), Roy F. Weston, Inc. (WESTON®) is submitting this report summarizing the results of the second quarter 2000 groundwater monitoring event completed at the above referenced project in June 2000. A description of the groundwater monitoring program and the results obtained during this monitoring period are presented in the following sections. Also included is a discussion of the laboratory analytical results that have exceeded the Preventive Action Limits (PAL) and Enforcement Standards (ES) promulgated by Wisconsin Department of Natural Resources (WDNR) in NR140.10, Public Health Groundwater Quality Standards.

The groundwater analytical results reported for the second quarter (June 2000) reflect conditions at the site where the funnel and gate groundwater treatment system including the installation of the containment performance wells and treatment-gate performance wells are already in place. This quarterly groundwater monitoring report presents the results of the shallow plume monitoring wells and the newly installed eight shallow containment performance wells.

1.0 BACKGROUND

In accordance with paragraph 4a of the Remedial Design and Remedial Action Statement of Work (RD/RA SOW), KMC is required to implement a groundwater monitoring program capable of detecting changes in chemical concentrations in the groundwater. As previously agreed, the monitoring network includes 23 groundwater monitoring wells—MW-3S, MW-3I, MW-4S, MW-4I, MW-5S, MW-6S, MW-7S, MW-7I, MW-8S, MW-8I, MW-9S, MW-9I, MW-10S, MW-13S, MW-20S, MW-20I, MW-25S, MW-26S, MW-27S, MW-28S, MW-29S, TW-05, and TW-09. Additionally, KMC is also required to extend the implementation of the above referenced groundwater monitoring program by sampling the eight newly installed containment performance shallow monitoring wells on a quarterly basis. These wells include MW-30S, MW-

-2-

13 September 2000

31S, MW-32S, MW-33S, MW-34S, MW-35S, MW-36S and MW-37S. These wells together form the new shallow monitoring well network.

In accordance with paragraph 4a (i) of the RD/RA SOW, the field measurement and analysis of groundwater samples includes groundwater elevation, pH, temperature, turbidity, specific conductance, redox potential, dissolved oxygen. Laboratory analyses include BTEX compounds (benzene, toluene, ethylbenzene, and xylene) and polynuclear aromatic hydrocarbon (PAH) compounds (acenaphthylene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)-anthracene, fluorene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene).

2.0 GROUNDWATER MONITORING RESULTS

The second quarter 2000 groundwater monitoring event at the Moss-American site was completed between 26 June and 30 June 2000. Tasks completed during the field effort for this event included the collection of groundwater elevation data from all the shallow monitoring wells referenced above. Following groundwater elevation data measurements, groundwater samples were collected from all the shallow monitoring wells with the exception of monitoring wells TW-09 and MW-8S, since these wells were removed during the installation of the funnel and gate groundwater treatment system. The results of the groundwater samples that were collected and analyzed from the shallow wells are described in the following subsections.

2.1 GROUNDWATER ELEVATION MEASUREMENTS

The depth to water was measured in each of the monitoring wells mentioned in Section 1.0 of this report. The measurements were conducted on 26 June 2000, prior to the beginning of groundwater sampling. These measurements were used to determine the elevation of the potentiometric surface of the shallow groundwater-bearing zone underlying the site. The water level measurements and resulting elevations are presented in Table 1. Figure 1 presents a groundwater elevation contour map that shows the potentiometric surface of the shallow groundwater-bearing zone. An evaluation of these results is presented in the following paragraphs.

As Figure 1 shows, the groundwater within the shallow groundwater-bearing zone generally flows northeastward toward the Little Menominee River. In the topographically higher, western portion of the site, the horizontal hydraulic gradient of the potentiometric surface is relatively

Mr. Russell D. Hart
U.S. EPA

-3-

13 September 2000

steep at approximately 0.0219 feet per foot (ft/ft). The gradient flattens near the river, as does the ground surface, with an average of approximately 0.0052 ft/ft.

The average velocity of groundwater flow within the shallow water-bearing zone can be calculated using the hydraulic gradients presented above, the average hydraulic conductivity used for the shallow water-bearing zone (1.2 feet per day [ft/day]), and the assumed effective porosity of 30 percent. In the western portion of the site the groundwater flow velocity is calculated to be approximately 0.087 ft/day. Near the river, the velocity of groundwater flow is calculated to be approximately 0.021 ft/day.

2.2 GROUNDWATER SAMPLE ANALYSES RESULTS

Groundwater samples were collected from a total of twenty-three shallow monitoring wells screened within the shallow groundwater-bearing zone. These wells include MW-3S, MW-4S, MW-5S, MW-6S, MW-7S, MW-9S, MW-10S, MW-13S, MW-20S, MW-25S, MW-26S, MW-27S, MW-28S, MW-29S and TW-05 and eight containment performance monitoring wells - MW-30S, MW-31S, MW-32S, MW-33S, MW-34S, MW-35S, MW-36S and MW-37S. In addition, for quality assurance/quality control (QA/QC) purposes, two sample duplicates, two matrix spike/matrix spike duplicates (MS/MSDs) and two field blanks (identified by a FB prefix) were collected. Trip blanks accompanied each cooler of sample bottles from the laboratory to the site and were shipped back to the laboratory within each cooler full of samples.

Each groundwater sample was measured for the field parameters discussed in Section 1 and analyzed for BTEX and PAH compounds. The results of these measurements and analyses are discussed in the following subsections.

2.2.1 Field-Measured Parameters

The groundwater samples were measured in the field for pH, specific conductance, temperature, redox potential, dissolved oxygen, and turbidity. The results of these measurements are provided in Table 2. As shown in Table 2, the groundwater pH ranged from 6.6 to 7.5 standard pH units (S.U.). The specific conductivity ranged from 0.25 to 0.66 mΩ/cm. Groundwater temperatures ranged from 11.8 to 18.6° C. The redox potentials of the groundwater ranged from -45 to 219 mV. Dissolved oxygen levels ranged from 1.1 to 7.9 mg/L. Turbidity ranged from 1.5 to 1,298 nephelometric turbidity units (NTU).

13 September 2000

2.2.2 Laboratory Analyses

Each groundwater sample collected during the second quarter 2000 monitoring period was analyzed for BTEX and PAH compounds. The results of these analyses are presented in Table 3. Table 3 also indicates those parameters that were detected at concentrations that exceed their respective PALs (shown as bold values). Parameters with concentrations exceeding both PALs and ESs are presented as bold and shaded values in Table 3. Groundwater sampling results during this quarter were also compared to the ES and PAL standards provided by the WDNR for anthracene, fluoranthene, pyrene, chrysene and benzo(b)fluoranthene. These results are summarized in the following paragraphs. The laboratory reports are presented in Attachment A.

Groundwater Sample Results

As Table 3 shows, primarily benzene, naphthalene, fluorene, pyrene, chrysene, benzo(b)fluoranthene and benzo(a)pyrene were detected at concentrations that exceed their respective PALs and/or ES in the groundwater samples collected from the shallow monitoring well network. The results are as follows:

PAL Exceedances:

- Benzene was detected at concentrations exceeding the WDNR PAL of 0.5 µg/L in groundwater samples collected from monitoring wells MW-4S, MW-7S and MW-34S.
- Naphthalene was detected at concentrations exceeding the WDNR PAL of 8 µg/L in groundwater samples collected from monitoring wells MW-4S, MW-7S, MW-32S, MW-33S, MW-34S and MW-35S.
- Fluorene was detected at concentrations exceeding WDNR PAL of 80 µg/L in groundwater sample collected from MW-4S and MW-34S.
- Pyrene was detected at concentrations exceeding WDNR PAL of 50 µg/L in groundwater sample collected from MW-4S.
- Chrysene was detected at concentrations exceeding WDNR PAL of 0.02 µg/L in groundwater sample collected from MW-4S, TW-05 and MW-35S.

Mr. Russell D. Hart
U.S. EPA

-5-

13 September 2000

- Benzo(b)fluoranthene was detected at concentrations exceeding the WDNR PAL of 0.02 µg/L in groundwater samples collected from monitoring wells MW-4S, TW-05 and MW-35S.
- Benzo(a)pyrene was detected at concentrations exceeding the WDNR PAL of 0.02 µg/L in groundwater samples collected from monitoring wells MW-4S, TW-05 and MW-35S.

ES Exceedances:

- Benzene was detected at concentrations exceeding the WDNR PAL of 5 µg/L in groundwater sample MW-34S.
- Naphthalene was detected at concentrations exceeding the WDNR ES of 40 µg/L in groundwater samples collected from monitoring wells MW-4S, MW-7S, MW-32S, MW-33S, MW-34S and MW-35S.
- Chrysene was detected at concentrations exceeding WDNR PAL of 0.2 µg/L in groundwater sample collected from MW-4S and TW-05.
- Benzo(b)fluoranthene was detected at concentrations exceeding the WDNR PAL of 0.2 µg/L in groundwater samples collected from monitoring wells MW-4S and TW-05.
- Benzo(a)pyrene was detected at concentrations exceeding the WDNR ES of 0.2 µg/L in groundwater samples collected from monitoring wells MW-4S and TW-05.

For the most part, the detected plume boundary is an area encompassing the three shallow monitoring wells (MW-4S, MW-7S and TW-05) with the wells MW-32S, MW-33S, MW-34S and MW-35S included during this quarter. Based on these detected concentrations, the width of the contaminant plume generally indicates an easterly trend as indicated in Figure 1 as well as during the previous nine quarterly groundwater-sampling events.

A summary of the concentration of contaminants at wells that have regularly exceeded PALs and/or ES during the last nine quarters are presented in Table 4. Levels of naphthalene, fluorene, and benzo(a)pyrene fluctuate over wide ranges in these wells without a common pattern. However, these constituents have shown a more consistent decreasing trend during the last two

Mr. Russell D. Hart
U.S. EPA

-6-

13 September 2000

quarters in monitoring wells MW-4S, MW-7S and TW-05. A more accurate trend and performance may be illustrated as additional data for the containment performance wells (MW-30S through MW-37S) becomes available during the future quarterly groundwater sampling events.

If you have any questions or require additional information, please do not hesitate to call me at (847) 918-4142.

Very truly yours,

LANCASTER LABORATORIES ANALYTICAL REPORT

Thursday, August 24, 2000

I have reviewed the analytical data provided by Lancaster Laboratories for the Moss American Site in Milwaukee, Wisconsin upon the information that was provided by the laboratory. The water samples we analyzed for Polynuclear Aromatic Hydrocarbons PAHs, and BTEX. A summary of the data validation provided below for samples delivery groups SDG MAS02, MOS50, MOS52, and MOS63.

Polynuclear Aromatic Hydrocarbons (PAHs by HPLC, U.S. EPA Method 8310)

Moss American Site
SDG # MAS02

1. Samples:

FB-05	3410378	water	06/29/00	07/05/00	07/11/00

2. Holding Times and Sample Receipt:

All samples were extracted and analyzed within the required holding times. All samples were received in condition by the laboratory.

3. Method Blank:

The method blank associated with the water samples PBLKTU extracted on 07/05/00 and analyzed on 07/10/00 was free of contamination.

4. Surrogate:

The surrogate recovery in the UV-Vis detector for NBNZ=Nitrobenzene (29-136%) was within the QC control limits; except for MW-26S-10 (145%) was outside the acceptance control limits. And the recovery for TPNL=Triphenylene in all the samples within the acceptance control limits (33-139%), except for the unspiked sample MW-4S-10 and the MS/MSD for that sample were diluted out and MW-26S10 was outside the QC control limits.

The surrogate recovery in the fluorescence for NBNZ=Nitrobenzene (29-136%) was outside the control limits, except for the unspiked sample MW-4S-10 and the MS/MSD for that sample were diluted out. And the recovery for TPNL=Triphenylene (33-139%) was within the control limits for all the water samples, except for the sample MW-26S-10 was outside the QC control limits and diluted out for the unspiked sample MW-4S-10 and the MS/MSD for that sample.

5. Laboratory Control Sample:

The laboratory control samples LCSF6 recovery was within the acceptance QC control limits.

6. Matrix Spike/Matrix Spike Duplicate Recovery:

The matrix spike and matrix spike MS/MSD duplicate were performed on sample MW-4S-10MS/MSD (3410368, 3410369). The matrix spike/matrix spike duplicate MS/MSD recoveries were all within the acceptance QC control limits, except for the following compounds in MS/MSD: fluorene, phenanthrene, anthracene, fluoranthene, dibenzo (a, h) anthracene, benzo (g, h, i) perylene, in MS for indeno (1,2,3-cd) pyrene, and in MSD for the following compounds: pyrene, benzo (a) anthracene, benzo (b) fluoranthene. No action was taken because the laboratory control sample results associated with these samples were within the laboratory and QAPP acceptance limits. The relative percent difference RPD was for all the compounds outside the acceptance QC control limits; except for in indeno (1,2,3-cd) pyrene (31%) was outside the QC control limits (30%).

7. Initial and Continuing Calibration:

The initial calibration, calibration verification, retention time and the analytical sequence were all with the acceptance control limits.

2. Holding Times and Sample Receipt:

All samples were analyzed within the required holding times. All samples were received in good condition by the laboratory.

3. Method Blank:

Two method blanks BLK6670, and BLK6670 were associated with the water samples. All the method blanks were free of contamination.

4. Matrix Spike/Matrix Spike Duplicate Recovery:

The matrix spike/matrix spike duplicate were performed on sample MW-4S-10MS/MSD (3410368, 3410369). The matrix spike/matrix spike duplicate and relative percent difference RPD recoveries were within the control limits (30%).

5. Laboratory Control Sample/Laboratory Control Sample Duplicate Recovery:

The laboratory control sample/laboratory control sample duplicate and the relative percent difference RPD recoveries were within the laboratory and QAPP acceptance limits.

6. Surrogate:

The surrogate trifluorotoluene- PID (69-132%) recovery for all the water samples was within the laboratory and QAPP acceptance limits.

7. Initial and Continuing Calibration:

The initial calibration, and calibration verification were all with the acceptance control limits.

MA3-MW7S-0280600-01 Grab Water Sample

Moss-American Superfund Site - Milwaukee, WI

7S-01 SDG#: MOS50-05

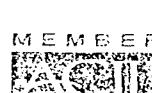

CAT No.	Analysis Name	CAS Number	As Received			Units	Dilution Factor
			Method	Result	Detection Limit		
08213	BTEX (8021)						
00776	Benzene	71-43-2	4.0	J	2.0	ug/l	10
00777	Toluene	108-88-3	N.D.		2.0	ug/l	10
00778	Ethylbenzene	100-41-4	19.		2.0	ug/l	10
00779	Total Xylenes	1330-20-7	52.		6.0	ug/l	10

Sufficient sample volume was not available to perform a MSD for this analysis. However, a MS was performed. In addition, a LCS/LCSD was performed to demonstrate precision and accuracy at a batch level.

Due to dilution of the sample made necessary by the high level of non-target compounds, normal quantitation limits were not attained.

MA3-MW27S-0280600-04 Grab Water Sample

Moss-American Superfund Site - Milwaukee, WI

27S-- SDG# : MOS50-08

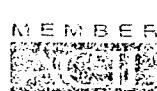

CAT No.	Analysis Name	CAS Number	As Received		Units	Dilution Factor
			Method	Detection Limit		
08213	BTEX (8021)					
00776	Benzene	71-43-2	N.D.	0.20	ug/l	1
00777	Toluene	108-88-3	N.D.	0.20	ug/l	1
00778	Ethylbenzene	100-41-4	N.D.	0.20	ug/l	1
00779	Total Xylenes	1330-20-7	N.D.	0.60	ug/l	1

Sufficient sample volume was not available to perform a MSD for this analysis. However, a MS was performed. In addition, a LCS/LCSD was performed to demonstrate precision and accuracy at a batch level.

The vial submitted for volatile analysis did not have a pH < 2 at the time of analysis. Due to the volatile nature of the analytes, it is not appropriate for the laboratory to adjust the pH at the time of sample receipt.
