RE: **Quarterly Report of Groundwater Sampling (January 2020 Event)**
Former Moss-American Facility, 8716 N. Granville Rd., Milwaukee, WI
FID # 241378280

Dear Mr. Wentland and Mr. Delcore:

The Sigma Group, Inc. (Sigma) is pleased to present this Quarterly Report of Groundwater Sampling for the above-referenced property (hereinafter "the site"). This report is the second Quarterly Report submitted in fulfillment of the Scope of Work prepared by the Wisconsin Department of Natural Resources (WDNR) in August 2019 and the Work Plan prepared by Sigma in September 2019.

In accordance with the Scope of Work and Work Plan, this Quarterly Report includes the following:

- Investigative waste manifests from this and the previous quarterly sampling round;
- groundwater monitoring well condition report of all wells;
- summary and tabulation of groundwater analytical results;
- laboratory reports of groundwater analytical results; and,
- recommendations for modification of future groundwater sampling, if any.

Investigative waste manifests resulting from groundwater monitoring well installation (soil), and groundwater sampling activities (well development and purge water) completed in September and October 2019 are included in **Attachment 1**. The investigative waste was picked up by Veolia ES Technical Solutions, LLC (Veolia) on November 15, 2019. The investigative waste manifest resulting from groundwater sampling activities completed in December 2019 and January 2020 is included in **Attachment 2**. The investigative waste was picked up by Veolia on January 31, 2020.

GROUNDWATER MONITORING WELL CONDITION REPORT

A total of fifty-three (53) groundwater monitoring wells are currently present at this site. The groundwater monitoring wells have been described by their original purpose, and named accordingly, in previous site documents, though beginning in 2013, all site groundwater monitoring wells have been used to monitor shallow groundwater quality and general effectiveness of the multiple rounds of remedial activities conducted on site. All groundwater monitoring wells were inspected in December 2019 and January 2020 and

the condition of each is presented in **Table 1**. A total of 46 groundwater monitoring wells are in good condition and were sampled.

Two monitoring wells (MW-9S and TG6-3) contain a slight obstruction: the probe of the multiparameter meter does not penetrate past 10 and 10.5 feet below top of casing, respectively. However, a bailer penetrates the full depth of the well. Monitoring wells MW-9S and TG6-3 were both sampled. Two monitoring wells (MW-7S and MW-38S) contain a bent well casing; however, both monitoring wells were sampled. One shallow groundwater monitoring well (MW-27S) and one piezometer (PZ-07) remain obstructed (at approximately four feet below top of casing) and cannot be repaired. Due to the obstruction, these two monitoring wells could not be sampled and require replacement.

Five monitoring wells (MW-B, MW-E, MW-F, MW-H, and MW-J) located along the Little Menominee River were not submerged during this round and were sampled. In the previous sampling round, these wells were under water due to high river levels and could not be sampled. However, even with seasonal low water levels, it appears that three or more groundwater monitoring wells along the river are typically submerged. Five of the eleven river reach wells were not sampled due to the adjacent river creating unsuitable sampling conditions (MW-C and MW-K), poor well condition (MW-G), or the monitoring well could not be located (MW-D and MW-I). Please note that monitoring well MW-A was sampled during both sampling rounds.

GROUNDWATER SAMPLING ACTIVITIES

All accessible groundwater monitoring wells in good condition were sampled between December 30, 2019 and January 10, 2020. Samples were obtained from 46 groundwater monitoring wells.

Groundwater monitoring wells were measured for the field parameters including water level, dissolved oxygen, oxidation-reduction potential, pH, temperature, turbidity, specific conductance, and ferrous iron using a Solinst Water Level Meter, a YSI Professional Plus Multiparameter meter and a Hach 2100Q portable turbidimeter. The groundwater monitoring wells were then purged using disposable bailers or a peristaltic pump. Following the recommendation made in the October 2019 Quarterly Report, each groundwater monitoring well was sampled approximately 24 hours after purging in order to minimize the possibility of drawing fine sediments into the samples. Each groundwater monitoring well was sampled for benzene, toluene, ethylbenzene, xylenes (BTEX) (EPA Method 8260), and the polycyclic aromatic hydrocarbons (PAHs) (EPA Method 8270). Quality control and quality assurance samples included 6 duplicate samples, 2 trip blanks, and 1 equipment blank. Groundwater generated from purging activities was contained in 55-gallon drums and picked up by Veolia on January 31, 2020 for disposal as hazardous waste. Manifests are included in **Attachment 2**.

SUMMARY OF GROUNDWATER ANALYTICAL RESULTS

Groundwater Elevation Measurements

Groundwater elevation measurements are consistent with previous results, generally within one-half foot of previous measurements, with the exception of the two monitoring wells MW-7S-WR and PZ-02. These two sample locations are adjacent to the creek at the north side of the main property and water levels decreased (1.7 and 1.8 feet, respectively) compared to October 2019 measurements, due to drop in river level from fall to winter. As recorded in previous site documents, groundwater flow is toward the Little Menominee River, or to the northeast, as depicted on **Figure 2**. Groundwater elevation measurements are summarized in **Table 2**.

Groundwater *In Situ* Measurements

Groundwater *in situ* measurements are reported in **Table 3**. In general, results are consistent with the previous round of *in situ* measurements or expected seasonal fluctuations (i.e., a general decrease in temperature). Turbidity measurements are generally more consistent throughout the site after following the October 2019 Quarterly Report recommendation to sample 24 hours after purging. Two sample locations (MW-32SR and MW-F) contained measurements too high for a measurement using the turbidimeter. One sample location (MW-34S-N) contained a high turbidity measurement and is likely due to poor recovery as noted during purging. Oxidation-reduction potential is consistent with results from fall 2019.

Groundwater Analytical Results

Groundwater samples from 46 groundwater monitoring wells were submitted to the laboratory for analysis of BTEX and PAHs. Laboratory reports are presented in **Attachment 3**, and results are summarized on **Table 4**. Results are compared to the Preventive Action Limits (PALs) and Enforcement Standards (ESs) published in the USEPA's Record of Decision (1990) for BTEX (hereinafter "EPA ROD PAL" and "EPA ROD ES"), and current NR 140 PALs and ESs for PAHs. Current NR 140 PALs and ESs for BTEX are also shown on **Table 4** for comparison purposes.

Summary of BTEX Results

Of the 46 groundwater monitoring wells sampled in this sampling round, 44 groundwater monitoring wells reported results less than the limit of detection for BTEX. The piezometer PZ-02 reported a concentration of total xylenes between the limit of quantitation and limit of detection, and less than both PALs and ESs; and reported concentrations of benzene, ethylbenzene, and toluene less than the limit of detection. Only one sampling location, the piezometer PZ-03, reported detectable concentrations of benzene, toluene, ethylbenzene, and total xylenes. Reported concentrations of ethylbenzene, toluene, and total xylenes for piezometer PZ-03 were less than both PALs and ESs. The reported concentration of benzene (1.45 µg/L) for piezometer PZ-03 is greater than both PALs and the EPA ROD ES, but less than the NR 140 ES. This result is less than the reported concentration of benzene within piezometer PZ-03 for the October sampling round (2.02 µg/L).

Summary of PAH Results

Of the 46 groundwater monitoring wells sampled in this sampling round, 28 groundwater monitoring wells reported results less than NR 140 PALs for PAHs. At the remaining 18 groundwater monitoring wells sampled, five analytes were reported at concentrations exceeding NR 140 PALs and/or ESs. The analytes are benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluorene, and naphthalene. Results of each of these five analytes are described below.

Benzo(a)pyrene

Eleven groundwater monitoring wells reported concentrations of benzo(a)pyrene greater than the NR 140 PAL and/or ES, generally in an area centrally located within the source property.

- Groundwater monitoring wells MW-32-SR, MW-35S, MW-37S, TG4-1, TG4-2, TG4-3, TG5-3, and TG6-1 reported concentrations of benzo(a)pyrene greater than the NR 140 PAL, but between the limit of quantitation and the limit of detection.
- Groundwater monitoring wells TG2-2 and TG5-2 reported concentrations of benzo(a)pyrene greater than the NR 140 PAL but less than the NR 140 ES.
- Groundwater monitoring well PZ-09R reported concentrations of benzo(a)pyrene greater than the NR 140 ES.

Benzo(b)fluoranthene

Sixteen groundwater monitoring wells reported concentrations of benzo(b)fluoranthene greater than the NR 140 PAL and/or ES, generally in an area centrally located within the source property, with one sample point (MW-30S) at the west end of the source property, and one "river reach" sample point (MW-H).

- Groundwater monitoring wells MW-30S, MW-32SR, MW-33S, MW-35S, MW-37S, TG3-2, TG3-3, TG4-1, TG4-2, TG4-3, TG6-1, and MW-H reported concentrations of benzo(b)fluoranthene greater than the NR 140 PAL, but between the limit of quantitation and the limit of detection.
- Groundwater monitoring wells TG2-2, TG5-2, and TG5-3 reported concentrations of benzo(b)fluoranthene greater than the NR 140 PAL but less than the NR 140 ES.
- Groundwater monitoring well PZ-09R reported concentrations of benzo(b)fluoranthene greater than the NR 140 ES.

Chrysene

Thirteen groundwater monitoring wells reported concentrations of chrysene greater than the NR 140 PAL and/or ES, generally in an area centrally located within the source property.

- Groundwater monitoring wells MW-32SR, MW-37S, TG3-2, TG3-3, TG4-1, TG4-2, TG4-3, and TG5-2 reported concentrations of chrysene greater than the NR 140 PAL, but between the limit of quantitation and the limit of detection.

- Groundwater monitoring wells MW-35S, TG2-2, TG5-3, and TG6-1 reported concentrations of chrysene greater than the NR 140 PAL but less than the NR 140 ES.
- Groundwater monitoring well PZ-09R reported concentrations of chrysene greater than the NR 140 ES.

Fluorene

One groundwater monitoring well reported a concentration of fluorene greater than the NR 140 PAL.

- Groundwater monitoring well PZ-03 reported a concentration of fluorene greater than its NR 140 PAL but less than its NR 140 ES.

Naphthalene

Two groundwater monitoring wells reported concentrations of naphthalene greater than the NR 140 PAL and/or ES.

- Groundwater monitoring well PZ-02 reported a concentration of naphthalene greater than its NR 140 PAL but less than its NR 140 ES.
- Groundwater monitoring well PZ-03 reported a concentration of naphthalene greater than its NR 140 ES and at a relatively high concentration. The concentration of naphthalene from the January sample (4000 µg/L) is greater than the concentration reported from the October 2019 sample (1620 µg/L). Review of the historical data indicate that PZ-03 was only sampled once previously in 2013, and that naphthalene was detected during that sampling round with a concentration of 47 µg/L, which is greater than the NR 140 PAL but less than the NR 140 ES.

RECOMMENDATIONS

Sigma will conduct the next round of quarterly groundwater monitoring using either low-flow sampling procedures or traditional bailer purging and sampling after 24 hours to minimize the possibility of drawing fine sediments from the formation into the samples, as recommended in the October 2019 Quarterly Report.

Sigma anticipates performing the next round of quarterly groundwater monitoring approximately 3 months following the completion of this round of quarterly groundwater monitoring, or about April 1, 2020. Please feel free to contact the undersigned should you have any questions.

Sincerely,

THE SIGMA GROUP

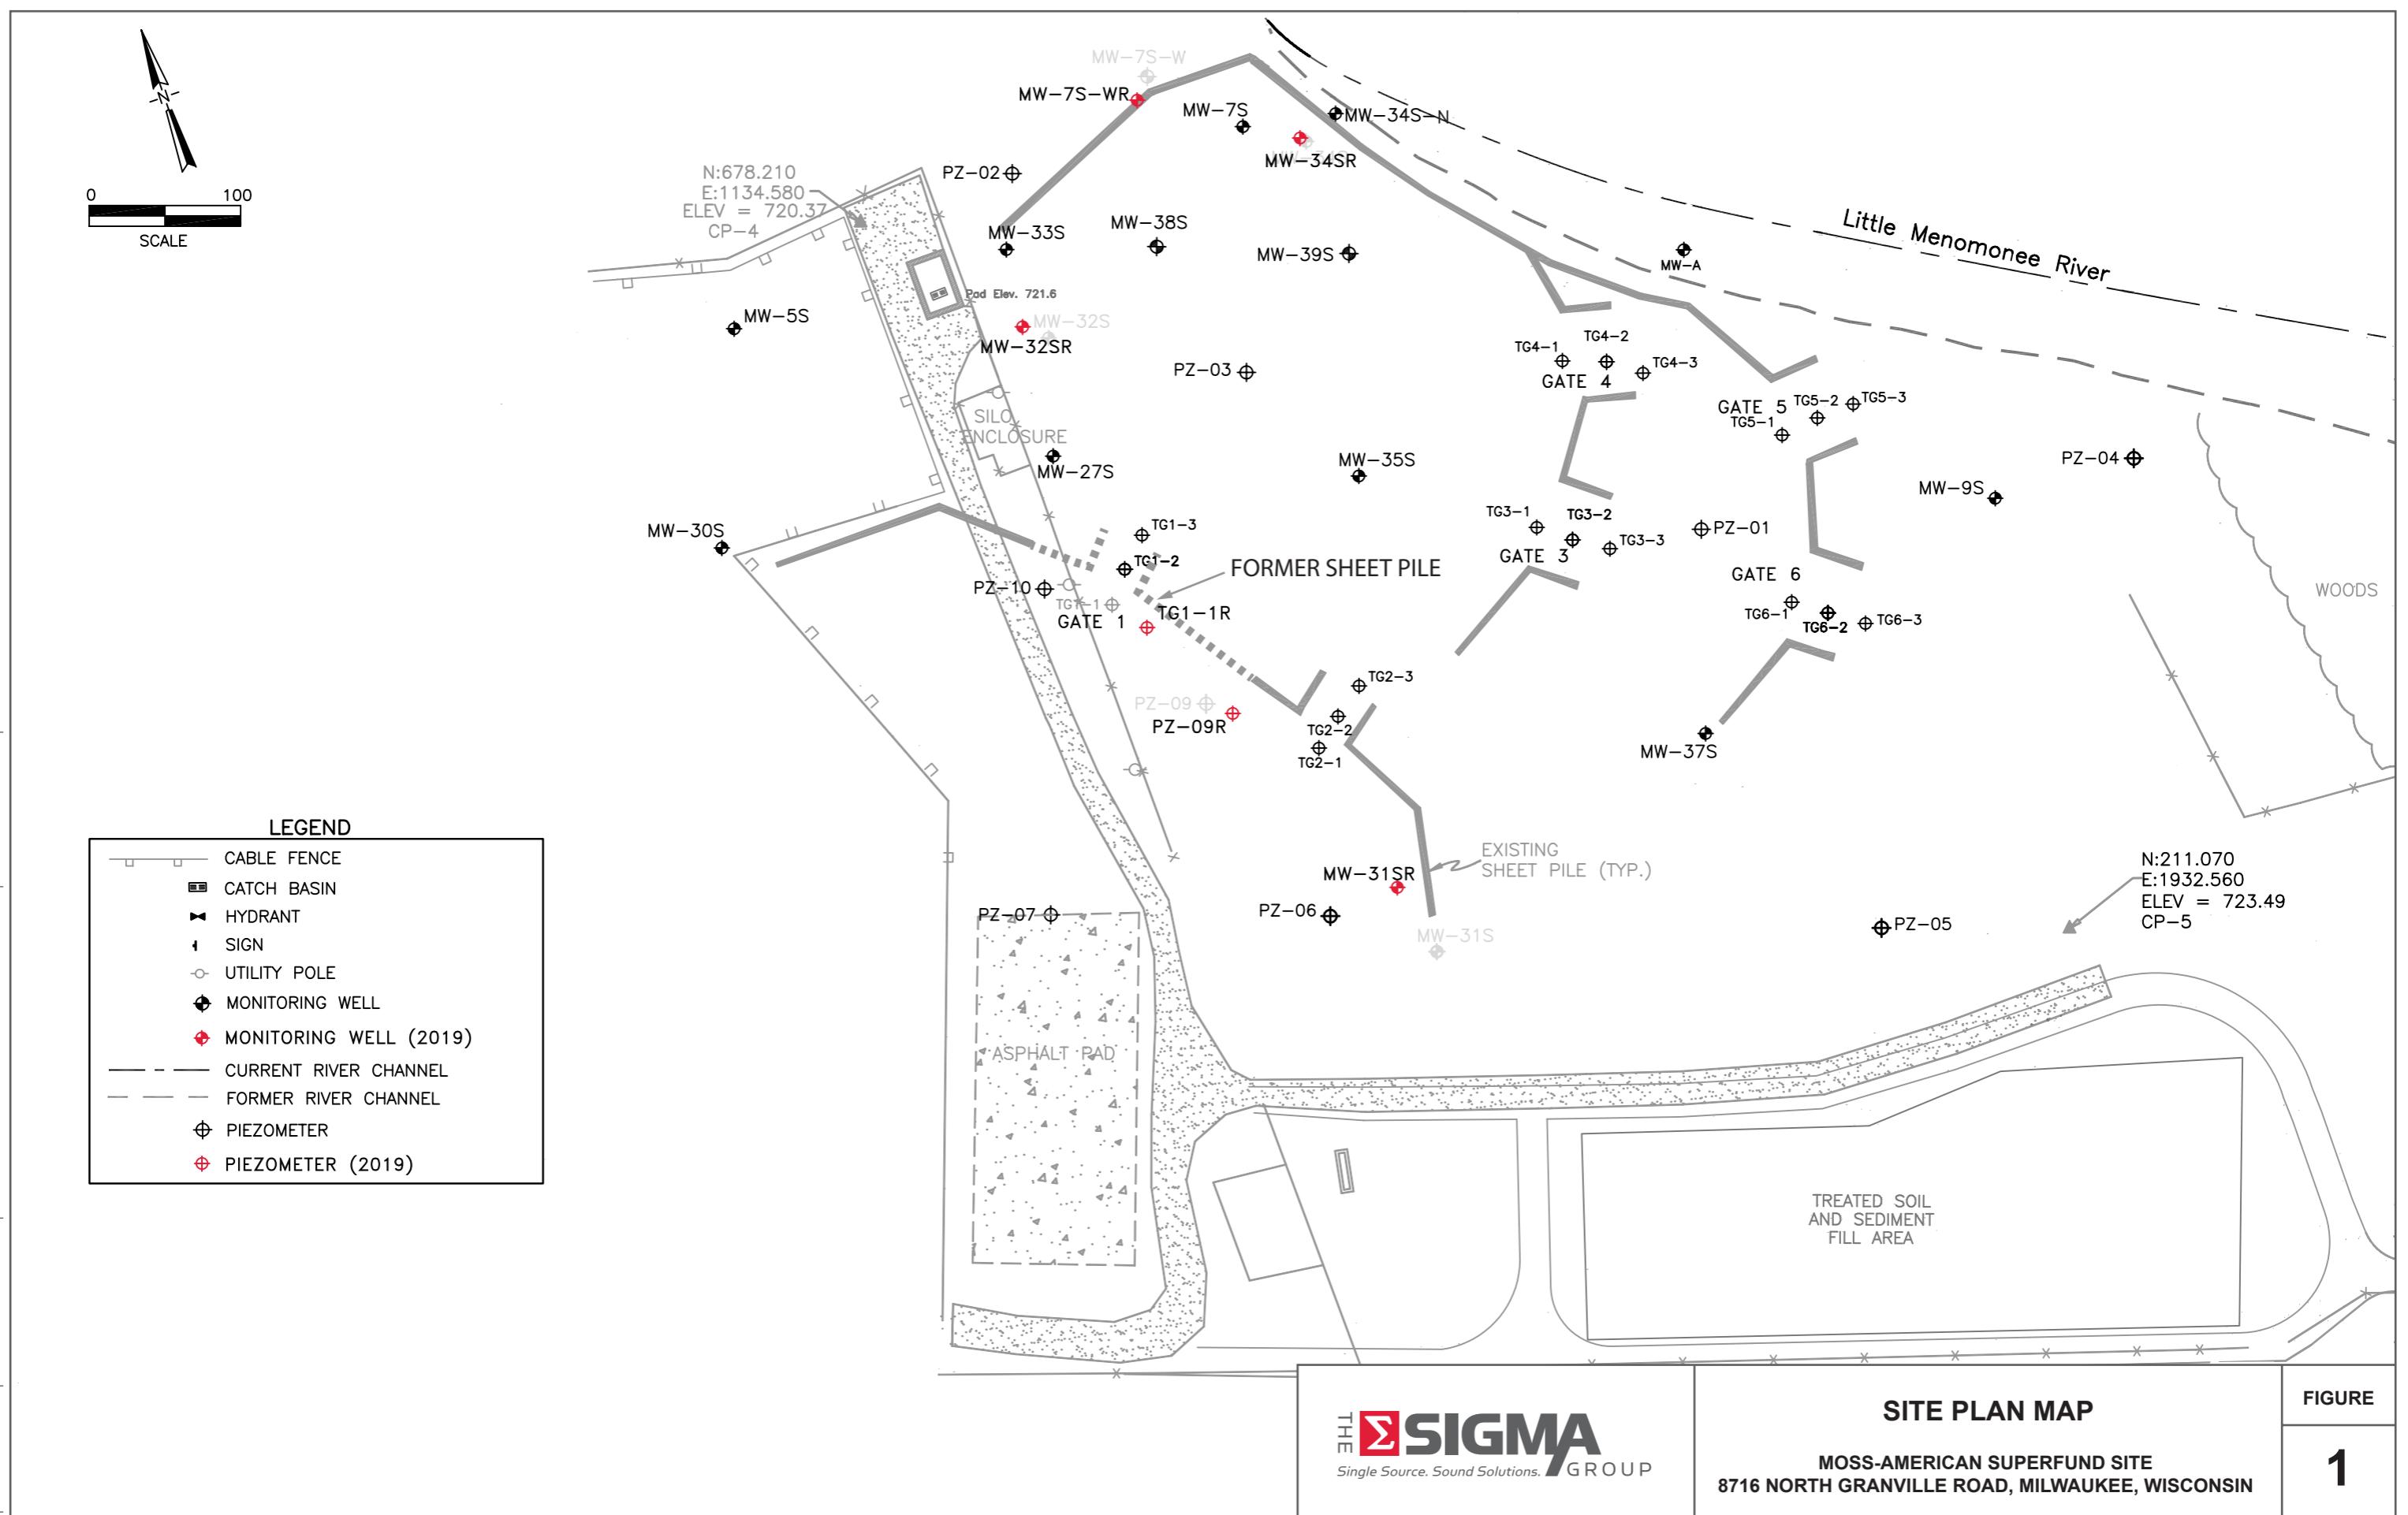

Andrea Lorenz

Notes:

1. EPA ROD ES = Enforcement Standard within the EPA's 1990 Record of Decision for Moss America

2. EPA ROD PAL = Preventive Action Limit within the EPA's 1990 Record of Decision for Moss America

3. NR 140 ES = Wisconsin Administrative Code, Chapter NR 140 Enforcement Standard

4. NR 140 PAL = Wisconsin Administrative Code, Chapter NR 140 Preventive Action Limit

5. NS = no standard

6. µg/L = micrograms per liter (equivalent to parts per billion, ppb)

7. Laboratory flags: "J" = Analyte detected between Limit of Detection and Limit of Quantitation

8. NT = not tested

9. Exceedances:

BOLD = Concentration exceeds NR 140 ES

ITALICS = Concentration exceeds NR 140 PAL

BOLD = Concentration exceeds EPA ROD ES

ITALICS = Concentration exceeds EPA ROD PAL

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code **Comment**

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code	Comment
1	Laboratory QC within limits.
2	Relative percent difference failed for laboratory spiked samples.
5	The QC blank not within established limits.

- | | |
| --- | --- |
| 1 | Laboratory QC within limits. |
| 2 | Relative percent difference failed for laboratory spiked samples. |
| 5 | The QC blank not within established limits. |

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code	Comment
-------------	----------------

- 1 Laboratory QC within limits.
- 2 Relative percent difference failed for laboratory spiked samples.
- 3 The matrix spike not within established limits.
- 64 Spike recovery failed due to matrix interference.
- 75 RPD failed due to matrix interference.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature
