Attachments: Location of MW-6 and PZ-3.pdf

Paul,

D&C Partners contacted me this morning regarding the addition to the building that is currently being constructed on site. The contractor is on site doing foundation work and they discovered that monitoring wells MW-6 and PZ-3 are located within the foundation foot print. For your reference, I have attached a copy of the Figure with the location of MW-6 and PZ-3 circled in red.

As we understand it, the WDNR has determined that no further assessment or sampling of the groundwater is necessary to obtain closure of this Site. Therefore, we would like to abandon these two monitoring wells to allow the construction of the addition to the building. All work will be done in accordance with NR 141.25(2)(d)

Does the WDNR have any concerns or reservations with the abandonment of these two monitoring wells?

If you need additional information, please feel free to contact me.

Thank you again for your time and attention to this matter.
