Subject: Review of Hazardous Waste Determination  
Superior Linens, 5005 S Packard Avenue, Cudahy  
DNR BRRTS Activity #: 02-41-532649; FID #: 241780880

Dear Mr. Peterburs:

The Department of Natural Resources (DNR) received a "Remediation Site Hazardous Waste Determination" form completed by your environmental consultant. The form was used to determine if soil planned to be excavated at the Superior Linens site must be managed as a hazardous waste due to it being contaminated with trichloroethene (TCE). A technical assistance review fee was provided to the DNR to provide a written response to the waste determination.

The waste determination provided to the DNR concluded that the excavated soil cannot be characterized as a hazardous waste. The specific product discharged to the environment cannot be identified and therefore cannot be confirmed as a listed hazardous waste. Detectable concentrations of volatile organic compounds, including TCE, were not identified in a composite sample collected for TCLP analysis from soil proposed to be excavated and is therefore not characteristically hazardous.

The DNR concurs with the conclusion of the waste determination. This concurrence does not negate the generator's responsibility for correctly classifying a solid waste under Wisconsin NR Administrative Code.

Please contact me by calling (414) 405-0764, or by email at [paul.grittner@wisconsin.gov](mailto:paul.grittner@wisconsin.gov) if you have any questions regarding this decision.

Sincerely,

Paul Grittner  
Hydrogeologist  
Remediation & Redevelopment Program
