**Subject: November 2019 Groundwater Sampling Summary
Former Gas Station, 704 75th Street, Kenosha, Wisconsin
BRRTS # 03-30-532981**

Dear Ms. Billingsley,

AECOM conducted the fourth of four groundwater sampling events on November 13, 2019 as part of the quarterly groundwater monitoring plan for 2019 at the former gas station located at 704 75th St in Kenosha, WI (Property). The sampling was conducted as described in Task Order 136-011619 for the City of Kenosha (authorized January 24, 2019). The purpose of this letter is to transmit the results of the November 2019 sampling event.

Site History

The Property is approximately 0.35 acres located at 704 75th Street, at the intersection of 75th Street and 7th Avenue in Kenosha, WI. The Property was formerly a gas station and convenience store. The Property is bordered to the north and west by residential properties, to the south across 75th Street by a convenience store, and to the east across 7th Avenue by a dentist office. The site location is depicted in Figure 1.

The Property previously had five underground storage tanks (USTs), one was removed in 2001 and the remaining four were removed in 2014. Following the tank removals, a site investigation was performed and a report dated November 2018 described the results of soil and groundwater sampling. Petroleum impact to soil above residual contaminant levels (RCLs) was observed at the water table (9-10' bgs [below ground surface]) but was not found in shallower soil samples (0-4' bgs). Additionally, petroleum impacts were detected in groundwater above the PAL (preventative action limit). Groundwater monitoring is being conducted to further evaluate the identified groundwater impact.

Groundwater Sampling

During the November 2019 sampling event, all four of the groundwater monitoring wells were sampled. The observation well (TP-OBS) located near the east Property boundary was not sampled during this time. Figure 2 depicts the site layout and monitoring well locations.

Prior to sample collection, depth to groundwater measurements were collected from the monitoring wells. Depth to groundwater measurements and calculated elevations are provided in Table 1. Groundwater samples were then collected from the monitoring wells using a new disposable bailer at each location. Wells were purged dry (3.5 to 4.5 gallons) and allowed to recover prior to sampling. Purge water was disposed in a local sanitary sewer. Field parameters, including pH, conductivity, oxygen reducing potential, dissolved oxygen, and temperature, were measured directly at the time the well was sampled. The field parameter measurements are included in Table 2.

Groundwater samples from the 4 wells were submitted to Pace Analytical Services, Inc. (Pace), in Green Bay, Wisconsin, and analyzed for volatile organic compounds (VOCs - SW846 Method 8260B) and polycyclic aromatic hydrocarbons (PAHs - SW846 Method 8270C SIM-HVI).

Groundwater Results

Contoured groundwater elevations from the November 2019 measurements depict groundwater flow to the east-southeast toward Lake Michigan (Figure 3). The observed flow direction remains consistent with the flow direction determined by AECOM in prior sampling events.

The groundwater analytical results were compared to Wisconsin Administrative Code Ch. NR 140.10, Table 1, Public Health Groundwater Quality Standards, and are summarized on Tables 3 and 4 and exceedances illustrated on Figure 4. The laboratory analytical report is also attached.

Groundwater analytical concentrations detected in the November 2019 sampling event are similar to previously detected groundwater concentrations. NR 140 Preventive Action Limit (PAL) or Enforcement Standard (ES) exceedances were not detected in monitoring wells MW-1, MW-3 or MW-4. Chloromethane exceedance in all wells in August 2018 was not detected in any wells in the following four 2019 sampling events. In November 2019, MW-2 has ES exceedances of 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, and naphthalene and PAL exceedances of ethylbenzene, MTBE, and total xylenes. MW-2 analyte concentrations are similar to detections in February 2019. Concentration trends were also evaluated for the groundwater from MW-2 (Figure 5). The five recorded sampling events have indicated a positive correlation between analyte concentrations (benzene, ethylbenzene and cumene are presented) and groundwater levels.

Conclusions

The overall groundwater plume appears to be stable and analyte concentrations at MW-2 appear to be influenced by groundwater elevations. Further evaluation will be conducted with the next groundwater sampling event to confirm the groundwater trends.

QUALIFIERS

Project: 60578411 704 75TH STREET
Pace Project No.: 40199229

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES
