**Subject: November 2020 Groundwater Monitoring Results**

**704 75th Street, Kenosha WI**  
**BRRTS# 03-30-532981**

Dear Ms. Billlingsley

AECOM conducted a groundwater sampling event on November 13, 2020 as part of quarterly groundwater monitoring for 2020 at the former gas station located at 704 75<sup>th</sup> St in Kenosha, WI (Property). The sampling was conducted as described in Task Order 150-010220 for the City of Kenosha (authorized January 7, 2020). The purpose of this letter is to transmit the results of the November 2020 sampling event.

Site History

The Property is approximately 0.35 acres located at 704 75<sup>th</sup> Street, at the northwest corner of the intersection of 75<sup>th</sup> Street and 7<sup>th</sup> Avenue in Kenosha, WI. The Property was formerly a gas station and convenience store. The Property is bordered to the north and west by residential properties, to the south across 75<sup>th</sup> Street by a convenience store, and to the east across 7<sup>th</sup> Avenue by a dentist office. The site location is depicted in Figure 1.

The Property previously had five underground storage tanks (USTs), one was removed in 2001 and the remaining four were removed in 2014. Following the tank removals, a site investigation was performed and a report dated November 2018 described the results of soil and groundwater sampling. Petroleum impact to soil above residual contaminant levels (RCLs) was observed at the water table (9-10' below ground surface [bgs]) but was not found in shallower soil samples (0-4' bgs). Additionally, petroleum impacts were detected in groundwater above the PAL (preventative action limit). Groundwater monitoring is being conducted to further evaluate the identified groundwater impact.

Groundwater Sampling

During the November 2020 sampling event, all four of the groundwater monitoring wells were sampled. The groundwater level was measured in the observation well (TP-OBS) located near the east Property boundary but the well was not sampled. Figure 2 depicts the site layout and monitoring well locations.

Prior to sample collection, depth to groundwater measurements were collected from the monitoring wells. Depth to groundwater measurements and calculated elevations are provided in Table 1. Groundwater samples were then collected from the monitoring wells using a new disposable bailer at each location. Wells were purged dry (two to three gallons) and allowed to recover prior to sampling. Purge water was disposed in a local sanitary sewer. Field parameters, including pH, conductivity, oxygen reducing potential, and temperature, were measured directly at the time the well was sampled. The field parameter measurements are included in Table 2. Dissolved oxygen was not measured in the November 2020 event.

Groundwater samples from the four wells were submitted to Pace Analytical Services, Inc. (Pace), in Green Bay, Wisconsin, and analyzed for volatile organic compounds (VOCs - SW846 Method 8260B) and polycyclic aromatic hydrocarbons (PAHs - SW846 Method 8270C SIM-HVI).

### Groundwater Results

Contoured groundwater elevations from the November 2020 measurements depict groundwater flow to the east-southeast toward Lake Michigan (Figure 3). The observed flow direction remains consistent with the flow direction determined by AECOM in prior sampling events.

The groundwater analytical results were compared to Wisconsin Administrative Code Ch. NR 140.10, Table 1, Public Health Groundwater Quality Standards, preventive action limits (PAL) and enforcement standards (ES). The reported concentrations are summarized on Table 3 (VOCs) and Table 4 (PAH) and exceedances are illustrated on Figure 4. The laboratory analytical report is also attached. There was one PAL exceedance in the November 2020 event by benzene in monitoring well MW-2.

Groundwater analytical concentrations detected in the November 2020 sampling event are lower than previously detected groundwater concentrations. NR 140 Preventive Action Limit (PAL) or Enforcement Standard (ES) exceedances were not detected in monitoring wells MW-1, MW-3 or MW-4. In November 2020, MW-2 has PAL exceedance of benzene and overall, much lower analyte concentrations were reported than during previous sample events. Concentration trends were also evaluated for the groundwater from MW-2 (Figure 5). The recorded sampling events have indicated a direct correlation between analyte concentrations (benzene and 1,3,5-trimethylbenzene) and groundwater levels.

### Conclusions

The overall groundwater plume appears to be stable and analyte concentrations at MW-2 appear to be influenced by groundwater elevations. Two years of quarterly sampling has been completed. The site should be considered ready for case closure.

Please contact us if you have questions about this letter.

Yours sincerely,

## Laboratory Analytical Report

November 18, 2020

Lanette Altenbach  
AECOM, Inc.  
1555 N River Center Drive  
Suite 214  
Milwaukee, WI 53212

RE: Project: 60578411 704 75TH STREET  
Pace Project No.: 40218444

Dear Lanette Altenbach:

Enclosed are the analytical results for sample(s) received by the laboratory on November 14, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska  
christopher.hyska@pacelabs.com

## QUALIFIERS

Project: 60578411 704 75TH STREET

Pace Project No.: 40218444

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 371561

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

R1 RPD value was outside control limits.
