## **1.0 INTRODUCTION**

This describes the contamination assessment activities at the former Jerry's Service located at 2477 North Holton Street in Milwaukee, Wisconsin. Seymour Environmental Services, Inc. (Seymour) is conducting this investigation in response to petroleum-related compounds identified during a tank removal assessment performed in early November 2011. The soil contamination was detected during removal of three underground storage tanks. The tanks had been out of use for several years. No other tanks are known to be present at the site.

Seymour and On-site Environmental Services, Inc. conducted the Geoprobe™ investigation on June 22, 2017.

### **1.1 Site and Consultant Information**

Site Location:      Former Jerry's Service  
                        2477 North Holton Avenue  
                        Milwaukee, Wisconsin 53203  
                        Parcel #: 321-1334-1  
                        SW ¼ of the SW ¼ of Section 16, Township 7 North, Range 22 East  
                        WTM: X: 690537 Y: 290020

Owner/  
Responsible Party: KP Ventures  
                        P.O. Box 511834  
                        Milwaukee, Wisconsin 53203  
                        Contact: Ms. Sujin Lee (414) 745-8790

Consultant:      Seymour Environmental Services, Inc.  
                        2531 Dyreson Road  
                        McFarland, Wisconsin 53558  
                        Contact: Robyn Seymour (608) 838-9120

Geoprobe/Driller: On-site Environmental Services, Inc  
                        P.O. Box 280  
                        Sun Prairie, Wisconsin 53590  
                        Contact: Kim Kapugi (608) 837-8992

Laboratory:      Pace Analytical  
                        1241 Bellevue Street, Suite 9  
                        Green Bay, Wisconsin 54302  
                        Contact: Dan Milewsky (920) 469-2436

### **1.2 Description of Surrounding Area**

The site is located in the near north side of the City of Milwaukee (Figure 1). The property is bounded to the north by E. Wright Street and the east by N. Holton Avenue. The subject parcel (PN: 321-1334-1) is 4,000 square feet. A single building approximately 1,300 square feet in size is present in the southwest portion of the property (Figure 2). The remainder of the property is covered by pavement with the exception of a thin strip of grass along the southern margin of the property ~8 feet wide. The legal description is J L Pierce's subdivision of lots 47-55 included in the SW ¼ Section 16, Township 7, Range 22 East V2P125 Block 42 E 8-0' Lot 1.

The area surrounding the site is highly developed. Property uses include a mix of residential and commercial properties.

### **1.3 Site Ownership and Usage**

The property has been owned by KP Ventures since 2004. The site is currently occupied by Waheed's Tire Center. Jerry's Tire was a previous tenant.

### **1.4 Regional Information**

The parcel is located at an elevation of ~698 feet msl. The surface topography slopes slightly toward the east. The Milwaukee River is located approximately 3,000 feet east of the site. Local surface water drainage is controlled primarily by the Milwaukee storm sewer system.

Native surficial materials at the site are glacial till deposits. These materials are comprised primarily of fine-grained sediments with thin, discontinuous sandy seams. The glacially-derived sediments extend to a depth of approximately 90 feet where bedrock is encountered. The bedrock at the site is Devonian-aged carbonate (Milwaukee Formation). This bedrock is typically a silty dolomite which contains numerous fossils.

Groundwater in the area is present within the glacial till deposits at a depth of about 15 feet. Flow in the shallow groundwater generally is reported to be southerly in the area. However, local variation in the groundwater flow is common.

### **1.5 Summary Previous Environmental Activities**

In November 2011 the fuel storage tank system was removed. The system consisted of three underground storage tanks, two 1,000 gallon leaded gasoline tanks and one 500 gallon waste oil tank, and associated gasoline dispensers. Soil samples were collected during the tank removal (Figure 3). Laboratory analyses showed that all of the soil samples contained at least one compound in excess of the Wisconsin Department of Natural Resources (DNR) soil standards. The sampling locations and identified soil contamination are shown on Figure 3.

## **2.0 SITE INVESTIGATION ACTIVITIES**

Seymour and On-site met at the site on June 22, 2017 to conduct soil and groundwater sampling. We installed a total of nine Geoprobe™ borings. Soil samples were collected continuously from each of the borings. The soil samples were screened for organic vapors in the field using a photo ionization detector equipped with a 10.6 eV lamp. One soil sample was selected at each location for laboratory analysis with the exception of boring B-7. The boring logs are included as Appendix A. The boring locations are shown on Figure 4.

We started our sampling near the former dispensers. The borings around the dispensers, B-1 through B-3, were installed to 5 feet to sample for direct contact analysis. No obvious contamination was present in boring B-1 or B-2 but odor and staining were present in B-3. One sample was collected from each of these borings for laboratory analysis. These samples were analyzed for petroleum volatile organic compounds (PVOCs) and polynuclear aromatic compounds (PAHs).

Borings B-4 through B-9 were installed around the former tank locations. Boring B-4 was extended to 10 feet, it appeared that water was present around 8 feet in that boring. Boring B-5 was extended to 12 feet when we were not able to collect a water sample at 10 feet. Boring B-6 was terminated at 5 feet since obvious contamination was detected. Boring B-7 was installed as far to the east as we could get from the former waste oil tank, since no contamination was detected in the shallow soil we extended the boring to 10 feet and submitted samples from 4 and 7 feet to confirm that the contamination did not impact this area. Boring B-8 was installed just south of the former waste oil tank and a groundwater sample was

collected. Soil samples selected from these boring were analyzed for PVOCs+naph. No obvious contamination was present in B-7 so B-9 was installed closer to the tank. Since obvious contamination was present at 4 feet the sample was analyzed for PVOCs and PAHs.

The two groundwater samples collected from borings B-5 and B-8 were analyzed for volatile organic compounds (VOCs) and PAHs. The laboratory report is included in Appendix B.

### **3.0 DISCUSSION OF RESULTS**

Soil contamination was present above the DNR standards in samples from 6 of the 9 borings. The heaviest contamination appears to be present around the two tank beds, the dispensers did not appear to have contamination in two of the borings, B-1 and B-2. Boring B-3 did have several groundwater residual contaminant levels (RCL) exceedances but they may have been associated with the piping and/or the tanks. No boring was installed south of the canopy because there was not enough overhead clearance. The soil analytical results are summarized on Table 1.

The highest levels of contamination were present near the former waste oil tank in the sample from boring B-9 collected at 4 feet. This sample contained compounds above the industrial direct contact standards as well as the groundwater pathway allowable RCLs. Boring B-8, also located adjacent to the former waste oil tank also has several compounds present above the groundwater RCLs and benzene was present above the residential direct contact standard. It appears that a small volume of contaminated soil is present around the former waste oil tank. No contaminants were present above the standards from either the 4 or 7 foot sample collected from boring B-7, indicating the contamination is localized around the tank. Groundwater at that location (B-8) only has an enforcement standard (ES) exceedance for benzene. The groundwater results are summarized on Table 2.

Borings B-4, B-5 and B-6 surrounded the two former gasoline tanks. All of the samples collected from these borings had groundwater protection RCL exceedances. A groundwater sample collected from boring B-5 had benzene, ethylbenzene, total trimethylbenzenes and naphthalene present above the ES. However, the levels were lower than would have been expected given that the soil results were well above standards.

### **4.0 RECOMMENDATIONS**

The soil contamination at the site is limited to the east portion of the site, where the tanks were located. The groundwater contamination will require further investigation.

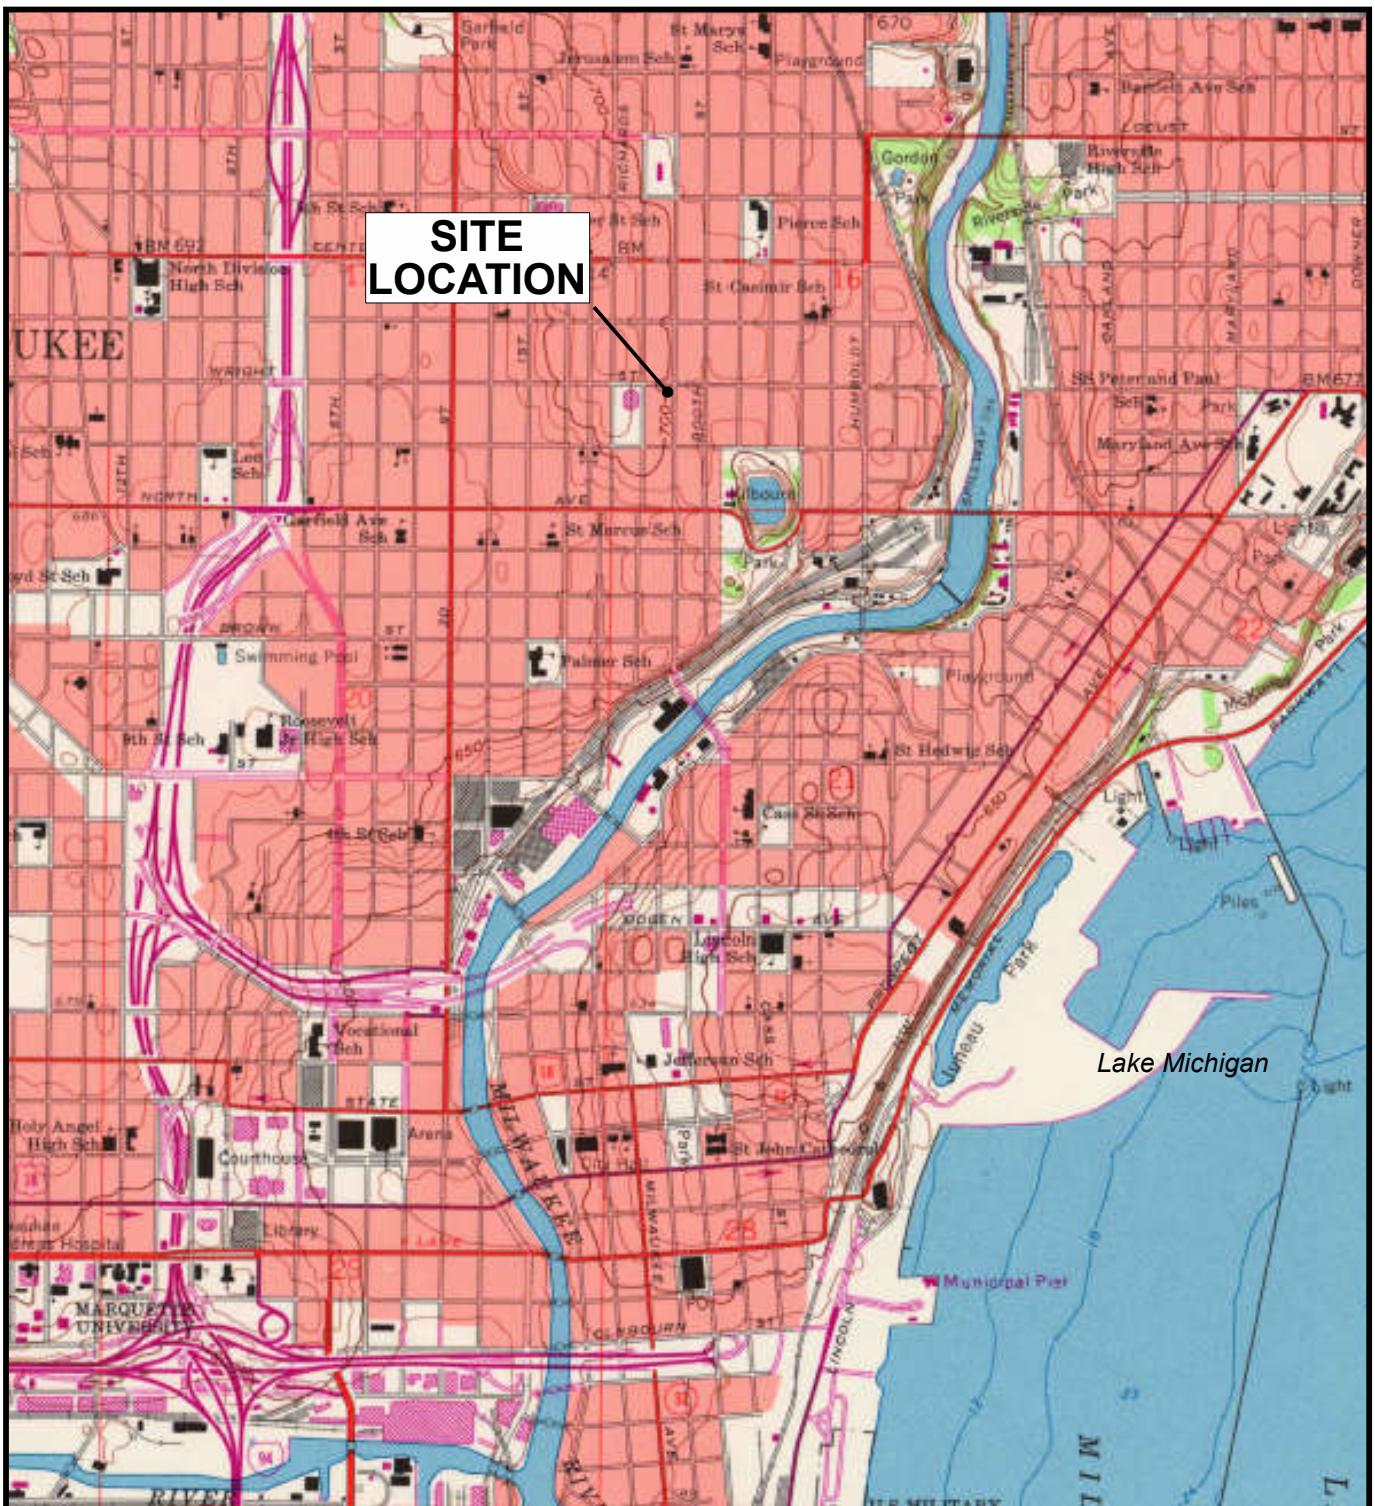

Once you have had a chance to review this data we would like to discuss our next phase with you. Questions should be directed to Robyn Seymour or Mark Fryman at (608) 838-9120.

Sincerely,  
**Seymour Environmental Services, Inc.**

Robyn Seymour

**LABORATORY REPORT**

July 18, 2017

Robyn Seymour  
Seymour Environmental Services, INC.  
2531 Dyreson Road  
Mc Farland, WI 53558

RE: Project: KP VENTURES  
Pace Project No.: 40152390

Dear Robyn Seymour:

Enclosed are the analytical results for sample(s) received by the laboratory on June 28, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: KP VENTURES  
Pace Project No.: 40152390

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### BATCH QUALIFIERS

Batch: 260190

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

- 1q There was no chance to reextract the sample within the samples hold time.
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results may be biased high.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.
- S0 Surrogate recovery outside laboratory control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S7 Surrogate recovery outside control limits (not confirmed by re-analysis).
- W Non-detect results are reported on a wet weight basis.
