Subject: One Hour Martinizing closure questions

Hello Wayne,

I am reviewing the One Hour Martinizing site for closure. Could you please provide me with the following information, which I need to complete my review and accurately convey the site conditions for closure consideration:

Provide revised vapor tables that include residential standards in addition to commercial standards. If concentrations exceed residential standards, closure letters for those properties will include a requirement that they cannot be converted to residential use with prior DNR approval.

Where were sub-slab samples SSV-12 and SSV-13 collected on the OHM property in 2018? I don't see them on the vapor figure. Were these samples discussed in a previous report? I don't see them in any report in BRRTS. I did not look through the hard copy file that I have here. Let me know what report that would be in.

If you could just email me these tables and figure it would be much appreciated.

Thank you,
Linda
