Wisconsin Department of Natural Resources  
141 NW. Barstow  
Waukesha, WI 53188

Subject: Kipp's Auto & Towing Service – Summary Report

Dear Mr. Michael,

Enclosed is the Summary Report for the Kipp's Auto & Towing Service site located at 5507 W Hampton Avenue in Milwaukee, Wisconsin. **This completes the Public Bidding Deferred workscope approved on August 11, 2015.**

#### **Vapor Sampling Workscope**

On December 7-8, 2015, Fehr Graham Engineering and Environmental of Plymouth, WI collected two indoor air samples (IA-5431 and IA-5433) from the basement of the residences located at 5431 and 5433 West Hampton Avenue. The air samples were collected using a Suma canister with a flow regulator that allowed the air sample to be collected over a 24 hour period for VOC analysis.

On December 7, 2015, Fehr Graham-Engineering & Environmental installed one sub-slab vapor sampling port (SS-3) in the basement of residence 5431 West Hampton Avenue. The sub-slab vapor sampling port was constructed by drilling a ½-inch pilot hole through the concrete slab and several inches into the sub slab material with a hammer drill. A 1½-inch outer hole is then drilled to depths ranging from ¾ -inch to 1-inch, depending on the concrete slab thickness. The hole was cleaned of dust and drilling debris using a shop-vac. A stainless steel vapor pin is installed in the inner hole with a silicon sleeve to obtain an air tight seal with the concrete floor. The remainder of the hole is sealed with hydrated bentonite and a water dam test was conducted to confirm that the seal is air tight.

On December 7, 2015, Fehr Graham-Engineering & Environmental collected vapor sample from the sub-slab sampling port (SS-3) for VOC (TO-15) analysis. Vapor sample was collected by using a short length of Teflon tubing to connect the sampling port and a 6-liter Suma canister. The air sample was collected using a Suma canister with a flow regulator that allowed the sub-slab vapor sample to be collected over a 30 minute period. Prior to collecting the sub-slab vapor sample, a shut in test was conducted to assure that the fittings between the sample probe and sampling container are air tight. No leaks were detected. The sub-slab soil vapor sampling results are summarized in the attached data table.

Fehr Graham attempted to install a sub-slab vapor sampling port (SS-1) under the residence at 5433 W Hampton Ave. However after drilling through the basement slab, groundwater was

encountered immediately beneath the slab and a sub-slab vapor sample could not be collected. It was discovered that the basement sump was not working. Instead, METCO personnel collected a water sample from the sump (5433) for PVOC and Naphthalene analysis. The proposed sub-slab vapor sampling port (SS-2) beneath Aby's African Hair Braiding was not conducted as there was no basement underneath this section of the building.

### **Drilling Project**

On December 7, 2015, Geiss Soil and Samples LLC, of Merrill, Wisconsin, conducted a drilling project under the supervision of METCO personnel. During the drilling project, one monitoring well (MW-8) was installed to 15 feet bgs. Four soil samples were collected during the drilling project for field (PID) and/or laboratory analysis (PVOC and Naphthalene). Upon completion, monitoring well MW-8 was properly developed.

### **Groundwater Monitoring Worksopce**

On February 16, 2016, METCO personnel collected groundwater samples from seven monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-6, MW-7, and MW-8) for VOC (MW-8), PVOC, and Naphthalene analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells. Monitoring well MW-5 was not sampled during this round because it was covered by a pile of dirt. Monitoring well MW-8 was surveyed at this time.

On May 18, 2016, METCO personnel collected groundwater samples from eight monitoring wells (MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, and MW-8) for PVOC and Naphthalene analysis. Water level, dissolved oxygen, pH, ORP, specific conductance, and temperature measurements were collected from all sampled wells.

### **Waste Disposal**

On April 28, 2016, DKS Transport Services, LLC of Menomonie, Wisconsin picked up and disposed of one drum of soil cuttings at the Advanced Disposal – Seven Mile Creek Landfill in Eau Claire, Wisconsin.

### **Discussion of Results:**

#### **Discussion of Vapor Results:**

Indoor Air Sample IA-5431: Showed no exceedances of the Residential Indoor Air Vapor Action Levels (VALs).

Indoor Air Sample IA-5433: Showed no exceedances of the Residential Indoor Air Vapor Action Levels (VALs).

Sub-Slab Vapor Sample SS-3: Showed no exceedances of the Residential Sub-Slab Vapor Action Levels (VALs).

### **Discussion of Soil Results:**

Soil Sample G-8-2: Collected at a depth of 8 feet bgs, showed NR720 Groundwater RCL exceedences for Benzene (4.1 ppm), Ethylbenzene (4.0 ppm), Napthalene (4.4 ppm), and Trimethylbenzenes (1.49 ppm).

### **Discussion of Groundwater Results:**

Monitoring Well MW-1: Currently shows NR140 Enforcement Standard (ES) exceedences for Benzene (3,010 ppb), Ethylbenzene (3,500 ppb), Naphthalene (340 ppb), and Trimethylbenzenes (525 ppb), as well as a NR140 Preventative Action Limit (PAL) exceedance for Xylene (892 ppb). Contaminant concentrations appear to be decreasing to stable.

Monitoring Well MW-2: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-3: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-4: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-5: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-6: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-7: Currently shows no detects for PVOC and Napthalene.

Monitoring Well MW-8: Currently shows NR140 ES exceedences for Benzene (96 ppb) and Naphthalene (272 ppb), as well as a NR140 PAL exceedance for Ethylbenzene (320 ppb).

Sump 5433: Currently shows no detects for PVOC and Napthalene.

### **Conclusions/Recommendations**

Due to an increase in contaminant levels in monitoring well MW-1 and that monitoring well MW-8 has only had two rounds collected from it, the WDNR will likely require additional groundwater monitoring prior to closure.

Also prior to closure, residual soil contamination will need to be addressed via a cap maintenance plan.

It should also be noted that, based on vapor results and groundwater samples from neighboring property sumps the risk of vapor intrusion appears unlikely.

Per WDNR response, METCO will proceed with the project.

A Detailed Site Map, Groundwater Flow Maps, Groundwater Contamination Map, Data Tables, Drilling Documents, Vapor Documents, and Laboratory Documents have been attached.

If you have any questions or comments please feel free to call (608-781-8879) or email at [jasonp@metcohq.com](mailto:jasonp@metcohq.com).

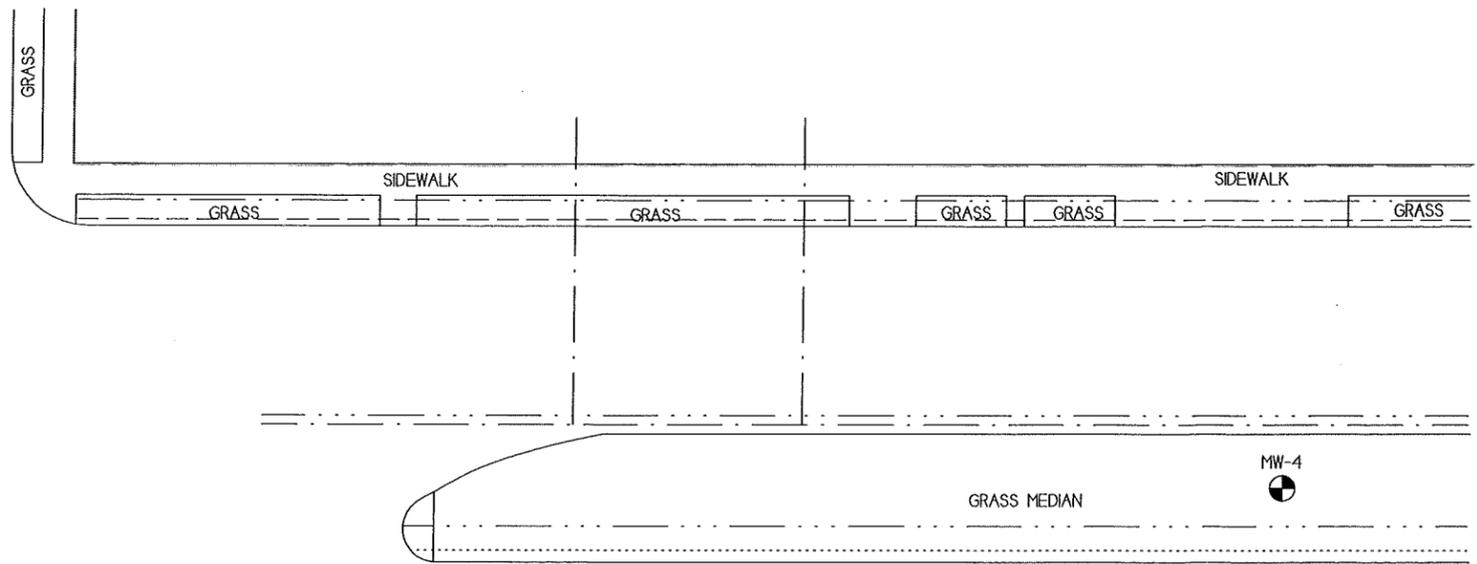

Sincerely,

A handwritten signature in black ink that reads "Jason T. Powell". The signature is fluid and cursive, with a long horizontal stroke extending to the left.

Pace Project No.: 10332815

Dear Matt Dahlem:

Enclosed are the analytical results for sample(s) received by the laboratory on December 10, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

*Carolynne Trout*

## QUALIFIERS

Project: 15-1488 Metco-Kipps  
Pace Project No.: 10332815

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor and percent moisture.

LOQ - Limit of Quantitation adjusted for dilution factor and percent moisture.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

### SAMPLE QUALIFIERS

Sample: 10332815001

[1] The internal standard recoveries associated with this sample exceed the lower control limit. The reported results should be considered estimated values.

Sample: 10332815002

[1] The internal standard recoveries associated with this sample exceed the lower control limit. The reported results should be considered estimated values.

### ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

R1 RPD value was outside control limits.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code Comment

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code	Comment
1	Laboratory QC within limits.
3	The matrix spike not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
