1.0 INTRODUCTION

EnviroForensics, LLC (EnviroForensics) has prepared this *Interim Remedial Action Completion Report* (Report) to document remedial activities performed at the Wagner Property located at 401 N. Wisconsin Street in Elkhorn, Wisconsin (Site). This Report has been prepared in accordance with the requirements of Wisconsin Administrative Code Chapter NR 724.15.

1.1 Site History and Description of Impacts

A commercial dry cleaning facility operated at the Site for an unknown number of years. The facility historically used tetrachloroethene (PCE) and possibly naphthalene and Stoddard solvent as dry cleaning solvents. Dry cleaning equipment was historically located in the northeastern part of the site building. The site was also previously used as a gasoline service station prior to the dry cleaning operation. The current layout of the Site, including Site features and the surrounding area, is depicted on **Figure 1**. The former building was razed in 2011, leaving the foundation and concrete floor slab in place to act as a cap over contaminated soil.

The primary contaminants of concern at the Site are naphthalene and chlorinated volatile organic compounds (CVOCs) including PCE and intermediate products of natural degradation [trichloroethene (TCE); dichloroethene (DCE); and vinyl chloride]. Residual concentrations of petroleum volatile organic compounds associated with a leaking underground storage tank (LUST) are also present. The LUST case was closed by the Wisconsin Department of Natural Resources (WDNR) in 2009.

The primary source area for PCE appears to be beneath and immediately north of the former dry cleaning machine location. A secondary source area, indicated by analytical results of samples collected from borings GP-1 and MW-1, is located south of the former building. Naphthalene contamination is more widespread beneath the eastern half of the former building, suggesting possible surface discharge or release from leaky sewer lateral(s). With the exception of the primary source area on the north side of the Site, the vertical extent of soil impacts do not appear to extend significantly into the silty clay material that begins at a depth of approximately 12 to 13 feet below ground surface (bgs). Saturated soil impacts in the primary source area extend as deep as 20 feet bgs.

Concentrations of PCE in groundwater are highest in groundwater samples collected from the primary source area well and piezometers, and in general decrease in monitoring wells interpreted to be at side-gradient, up-gradient and down-gradient locations. Concentrations of breakdown products cis-1,2-DCE and vinyl chloride are more widespread in shallow groundwater beneath the Site, and the distribution of impacts supports the conclusion that groundwater flow direction is variable.

1.2 Remedial Objectives

The interim remedial action plan consisted of excavation and off-site disposal of contaminated soil. The objectives of the interim action were to:

- Reduce the in-place volume of highly contaminated unsaturated soil; and
- Reduce further contaminant contribution to the dissolved-phase groundwater plume.

2.0 REMEDIAL ACTIVITIES

The interim remedial action consisted of waste characterization, contaminated soil excavation and off-site disposal, and backfilling with a compactable material. The remedial activities were conducted as described in the *Remedial Action Options Evaluation and Interim Action Design Report* dated August 12, 2021, approved by a October 25, 2021 letter from the Wisconsin Department of Natural Resources, with the exception of hazardous waste management and disposal as described in the following section.

2.1 Waste Characterization

EnviroForensics retained a drilling subcontractor to facilitate soil sample collection for purposes of waste characterization in advance of excavation activities. The objective of the sampling event was to confirm that soil within the proposed excavation zones could be characterized as non-hazardous for waste profiling and disposal purposes. The sampling was completed on November 15, 2021. EnviroForensics personnel observed all field activities and containerized all samples for analysis.

Nine (9) direct-push soil borings were advanced at the locations shown on **Figure 2** to a depth of 5 feet bgs. The boring locations were evenly distributed across the proposed excavation areas. Field screening of soil for organic vapors was performed using a photo-ionization detector (PID) at 2.5-foot depth intervals. One (1) composite sample of soil beneath the remaining concrete slab was collected from 1-5 feet bgs each boring, including soil from the interval that exhibited the highest PID reading. The nine (9) soil samples, designated WS-1 through WS-9, were submitted to a laboratory for analysis of volatile organic compounds (VOCs) according to United States Environmental Protection Agency (U.S. EPA) Test Method 8260 and Toxicity Characteristic Leaching Procedure (TCLP) Test Method 1311.

The results of the analyses, summarized in **Table 1**, were compared to toxicity thresholds to delineate zones of hazardous waste. Only the TCLP threshold for PCE [0.7 micrograms per Liter ($\mu\text{g}/\text{L}$)] was exceeded in only one (1) sample, WS-9 at 12.7 $\mu\text{g}/\text{L}$. Based on this result, planning was initiated for management of soil excavated from the northeast corner of the proposed excavation area as hazardous waste.

2.2 Soil Excavation

The excavation tasks were completed by Covanta Environmental Solutions during May 18-20, 2022, under the direction of EnviroForensics. The portion of the former building floor slab within the excavation areas was broken up and transported off-site for recycling. With the concrete removed, contaminated soil was removed using an excavator and loaded directly into dump trucks. The target excavation depth across the entire area was 5 feet bgs; however, additional soil was removed beneath the north foundation wall based on extremely high PID readings. In this area, the excavation depth reached a maximum of 9 feet bgs.

A total of 422.4 tons of contaminated soil were excavated, loaded, and transported off-site for disposal. This consisted of:

- 365.2 tons designated non-hazardous waste, transferred to either Pheasant Run landfill in Bristol, Wisconsin or Metro landfill in Franklin, Wisconsin; and
- 57.2 tons of hazardous waste transported to the US Ecology facility in Wayne, Michigan for treatment and disposal.

Copies of the waste manifests and weight tickets are provided in **Appendix A**. The excavation was backfilled with compacted screenings. Photographs of the excavation are presented in **Appendix B**.

EnviroForensics staff made the following notable observation during the excavation:

- The joint between the floor slab and foundation wall in the vicinity of the former dry cleaning machine location appeared to be a source of release for PCE. Soil was visibly impacted around and immediately beneath the footing, which only extended approximately two feet below grade. The highest PID readings and sample results were in the excavation sidewalls in this area.

2.3 Post-Excavation Soil Sampling

Soil samples were collected from the floor and sidewalls of the excavation area to document residual VOC concentrations. Eight (8) floor samples were collected from depths ranging from 5 to 9 feet bgs, and ten (10) sidewall samples were collected from approximately 4 feet bgs using

new, disposable core sampling devices. Soil cores were transferred into vials containing methanol per U.S. EPA Method 5035, and the samples were immediately placed in a cooler on ice under chain of custody control and submitted to Synergy Environmental Lab for analysis of VOCs by U.S. EPA Method 8260.

The soil sample analytical results are summarized and compared to Residual Contaminant Levels on **Table 2**. The soil sample locations and contaminant concentrations exceeding direct-contact RCLs are depicted on **Figure 3**. Laboratory analytical reports are provided in **Appendix C**. Naphthalene was detected in all of the floor samples and six (6) of the ten (10) sidewall samples at concentrations above the non-industrial RCL; however, the residual soil impact within excavation limits defined by the floor samples is at a depth greater than 4 feet bgs with clean fill above, and therefore not considered to present a direct-contact risk. Ethylbenzene was detected in one (1) sample (EX-F-2) at a concentration above its non-industrial RCL, and both PCE and TCE were detected in the sidewall sample collected from the northwest part of the excavation (sample EX-W-1) at concentrations above industrial RCLs. The concentrations of all other detected compounds were less than the applicable non-industrial RCLs.

3.0 CONCLUSIONS

Excavation activities resulted in the removal of 422.4 tons of contaminated soil. The mass of PCE and naphthalene removed was estimated by assigning concentrations (using the investigation, source area characterization, and post-excavation sampling data) at 22 individual “volumes” that added up to the total tons of soil excavated. According to this estimation, approximately 50 pounds of PCE and 13 pounds of naphthalene were removed.

Contaminant mass resides along the excavation boundaries, especially in the northwest part of the excavation defined by sidewall sample EX-W-1. However, based on Site observations the high concentrations are likely limited to within a couple feet of the former building foundation. Significant contaminant mass also resides in groundwater, and in saturated soil (deeper than 5 feet bgs) below the former dry cleaning machine location. *In-situ* treatment options for this contaminant mass will be evaluated. Additional groundwater monitoring points have been installed within the excavation footprint to provide more comprehensive concentration data for designing a potential remedial action.

Notes:

¹ Residual Contaminant Levels calculated according to the procedures described in WDNR Publication RR-890

All concentrations reported in units of micrograms per kilogram ($\mu\text{g}/\text{kg}$)

Samples analyzed using EPA SW-846 Method 8260

J = Estimated concentration between the Method Detection Limit and the Reporting Limit

N.E. = Not Established

RCL = Residual Contaminant Level

Bolded values are above laboratory detection limits

Bolded and Orange Shaded value indicates an exceedance of the Industrial Residual Contaminant Level

Bolded and Green Shaded value indicates an exceedance of the Non-Industrial Residual Contaminant Level

Bolded and Blue Shaded value indicates an exceedance of the Soil to Groundwater Residual Contaminant Level

APPENDIX B

Photographs

Overview of planned excavation area, facing north. Concrete features are the foundation walls and slab of the former building.

North end of the excavation, facing west. Sections of the footing in this area were removed to allow excavation of highly contaminated soil beneath.

East side of the excavation, facing south.

Completed southeast corner of excavation, facing southeast.

Overview of the separate excavation area between the former building and 1st Street right-of-way, facing west.

Northeast corner of the excavation expanded beyond the foundation to remove highly contaminated soil, facing northwest.

Overview of area showing complete backfill with screening material, facing southwest.

RE: Project: 6526 WAGNER PROPERTY
Pace Project No.: 40237039

Dear Brian Kappen:

Enclosed are the analytical results for sample(s) received by the laboratory on November 16, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40237039

Sample: 6526-WS-1 (1-5') Lab ID: 40237039001 Collected: 11/15/21 09:45 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40237039

Sample: 6526-WS-2 (1-5') Lab ID: 40237039002 Collected: 11/15/21 10:00 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40237039

Sample: 6526-WS-3 (1-5') Lab ID: 40237039003 Collected: 11/15/21 10:15 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40237039

Sample: 6526-WS-5 (1-5') Lab ID: 40237039005 Collected: 11/15/21 10:45 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40237039

Sample: 6526-WS-8 (1-5') Lab ID: 40237039008 Collected: 11/15/21 11:25 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40237039

Sample: 6526-WS-9 (1-5') Lab ID: 40237039009 Collected: 11/15/21 11:45 Received: 11/16/21 11:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40237039

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

R1 RPD value was outside control limits.

S1 Surrogate recovery outside laboratory control limits (confirmed by re-analysis).

S4 Surrogate recovery not evaluated against control limits due to sample dilution.

RE: Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Dear Brian Kappen:

Enclosed are the analytical results for sample(s) received by the laboratory on May 24, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-F-1 Lab ID: 40245361001 Collected: 05/18/22 11:33 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-F-2 Lab ID: 40245361002 Collected: 05/18/22 13:10 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-F-4 Lab ID: 40245361004 Collected: 05/19/22 08:50 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40245361

Sample: 6526-EX-F-7 Lab ID: 40245361007 Collected: 05/19/22 11:35 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-W-2 Lab ID: 40245361010 Collected: 05/19/22 08:10 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-W-3 Lab ID: 40245361011 Collected: 05/19/22 09:00 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-W-4 Lab ID: 40245361012 Collected: 05/19/22 11:05 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40245361

Sample: 6526-EX-W-8 Lab ID: 40245361016 Collected: 05/20/22 07:45 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 6526 WAGNER PROPERTY
Pace Project No.: 40245361

Sample: 6526-EX-W-10 Lab ID: 40245361018 Collected: 05/20/22 07:55 Received: 05/24/22 09:45 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

QUALIFIERS

Project: 6526 WAGNER PROPERTY

Pace Project No.: 40245361

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

S4 Surrogate recovery not evaluated against control limits due to sample dilution.
