Hi Tauren,

Thanks for the info. I was curious as to what the latest was with this site. You are correct that I don't need to provide a coordinated approval until an approval on the remedy is issued. I will take a look at the report. As you review the document, feel free to reach out with questions as you develop comments or thoughts on additional site investigation.

I will let you know if I have any questions after I've had a chance to look it over.

Thanks,
Peter

Hi Peter,

Stantec, on behalf of the City of Manitowoc, has submitted a report (titled Phase II Environmental Site Assessment, dated March 19, 2020) which includes more PCB data and a fee is being submitted this Friday for DNR to review the site investigation at this site. Other DNR staff and myself will be looking at the site investigation data and will be providing a written response to the City & Stantec on additional site investigation that is needed. Based on our previous discussions with the coordinated approval process, I don't think you need to provide any coordinated approvals on your end until an official RAOR is submitted for remediation of the PCB contamination. Is that correct?

I wanted to provide you with the report though because it is quite a comprehensive report and does include some information about how they are thinking of planning to remediate the PCBs in Sections 5

and 6. It is a large document, but can be found on BRRTS on the Web at the following link: <https://dnr.wi.gov/botw/GetActivityDetail.do?siteId=574700&adn=0236545108>. The report is recorded in BRRTS on the Web on 2020-03-23 and titled 20200323_37_SIR.pdf. As part of the additional data collected, they did analyze NAPL found at the site for PCBs, which was not detected. The attached email summarizes the analysis of the NAPL.

If you have any questions, please let me know.

Regards,

Subject: Review of Mirro Reports

Tauren:

In following up to our recent discussion, the City is submitting a hard copy of Form 4400-237 with a check for \$1050 to facilitate WDNR review of the recent (2020) Phase II ESA; UST Assessment; and LNAPL Characterization reports. I wanted to make sure this fee is satisfactory.

Your review will be important to clarify the responsibilities of the RP in future assessment/cleanup activities and complete the coordinated review with USEPA of the requested site-specific PCB soil cleanup criteria. The results of your review will guide the next steps in assessment and cleanup.

** I did not see the UST Assessment or LNAPL Characterization Reports on BRRTS. I just uploaded them through the portal, so hopefully they arrive on BRRTS. Those reports will be important for the RP to review as they develop their future workplans.

Sincerely,

Harris Byers, Ph.D.
