RE: Contained-out Determination  
Master Dry Cleaning  
6325 W Bluemound Road  
Wauwatosa, Wisconsin  
BRRTS #:02-41-545142/03-41-547831

Dear Ms. Boyce,

Sigma Environmental Services, Inc. (Sigma) on behalf of Master Dry Cleaners has prepared the attached Remediation Site Hazardous Waste Determination request for your review and hazardous waste determination of the soil and groundwater generated during the recent site investigation activities conducted at the Master Dry Cleaners property located at 6325 W Bluemound Road in Wauwatosa, Wisconsin (hereinafter the "site").

#### **BACKGROUND**

Investigation activities recently conducted at site generated soil and groundwater which requires proper disposal off-site. Based on the site investigation results, select chlorinated volatile organic compounds (primarily tetrachloroethene [PCE] and trichloroethane [TCE]) were detected within the soil and groundwater collected at the site. According to chapter NR 661, PCE, TCE, and vinyl chloride are listed hazardous wastes and therefore soil containing these constituents would also be categorized as a hazardous waste unless contaminant concentrations are detected below the health based levels (WDNR Publication RR-705). In the Wisconsin Department of Natural Resource (WDNR) newsletter dated November 14, 2005 the WDNR provided contained-out values for soil containing TCE (14 parts per million [ppm]), PCE (33 ppm), and vinyl chloride (0.87 ppm). In addition, according to the WDNR Publication RR-705 contaminated groundwater containing a listed waste remains hazardous until the chapter NR 140 enforcement standard (ES) is met.

#### **HAZARDOUS WASTE DETERMINATIONS**

The following hazardous waste determinations were determined by evaluating the soil and groundwater quality results generated to date with respect to the WDNR contained-out values.

#### **Soil**

Based on the site investigation activities completed to date, TCE, PCE, and vinyl chloride were not detected at concentrations greater than the WDNR contained-out

values within the soil samples collected at the site, with the exception of TCE and PCE reported at soil sample MW-9 (14-15 feet bgs). Specifically, TCE and PCE were reported at 54 PPM and 214 PPM within the soil collected from soil boring MW-9 (14 -15 feet bgs) which is located in the source area. Therefore based on soil quality results soil generated at the site to date, with the exception of soil boring MW-9, meets the requirement of the contained-out policy and therefore is not considered a hazardous waste. Soil generated from soil boring MW-9 exceeds the WDNR contained-out values and is considered a hazardous waste and will be managed appropriately. Soil quality results generated to date are included as *Table 1*.

#### **Groundwater**

Contaminant concentrations detected within the groundwater collected to date indicates that TCE, PCE, and vinyl chloride are present at concentrations greater than the NR 140 ES within the groundwater collected from select site monitoring wells (SMW-3, SMW-4, SMW-6, SMW-9, MW-1 and MW-3). Due to the NR 140 ES exceedances detected within the groundwater collected from select monitoring wells at the site, Sigma recommends that groundwater be segregated during groundwater sampling activities at the site. Specifically, groundwater generated from monitoring wells (SMW-3, SMW-4, SMW-6, SMW-9, MW-1 and MW-3) which exhibit NR 140 ES exceedances will be disposed of as a hazardous waste while groundwater generated from monitoring wells (SMW-1, SMW-2, SMW5, SMW-7, SMW-8, and MW-2) which do not display a NR 140 ES exceedance and therefore meet the requirement of the contained-out decisions, will be disposed as a non-hazardous waste. Groundwater quality results generated to date are included as Table 2. *(not included?)*

We request that WDNR concur with our contained-out determinations for the soil and groundwater generated during site investigation activities at the site. If you have any questions or require further information during your review of the Remediation Site Hazardous Waste Determination request, please call me at (414) 643-4200.

Sincerely,

**SIGMA ENVIRONMENTAL SERVICES, INC.**

Notes: Laboratory analyses performed by: Synergy Environmental Lab, Inc.  
 J = Analyte detected between Limit of Detection and Limit of Quantitation  
 mg/kg = milligrams per kilogram (equivalent to parts per million)  
 µg/kg = micrograms per kilogram (equivalent to parts per billion)  
 NA = Not Analyzed      NS = No Standard  
 NR 720 RCL = Wisconsin Administrative Code, Chapter NR 720 generic Residual Contaminant Level (industrial land use RCLs for RCRA metals).  
 NR 746 Table 1 = Wisconsin Administrative Code, Chapter NR 746, Table 1 soil screening level: Indicators of Residual Petroleum Products in Soil Pores.  
 NR 746 Table 2 = Wisconsin Administrative Code, Chapter NR 746, Table 2: Protection of Human Health from Direct Contact with Contaminated Soil.  
 Interim RCL = More stringent generic Residual Contaminant Level for protection of groundwater (gw) or direct contact (dc) pathway for non-industrial land use from WDNR Publication RR-519-97 "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance" (April 1997)  
 \* = Calculated Site Specific RCLs  
 Exceedances: **BOLD** = detected compound      **BOX** = concentration exceeds standard or site specific RCL

Notes: Laboratory analyses performed by: Synergy Environmental Lab, Inc.  
 J = Analyte detected between Limit of Detection and Limit of Quantitation  
 mg/kg = milligrams per kilogram (equivalent to parts per million)  
 µg/kg = micrograms per kilogram (equivalent to parts per billion)  
 NA = Not Analyzed NS = No Standard

NR 720 RCL = Wisconsin Administrative Code, Chapter NR 720 generic Residual Contaminant Level (industrial land use RCLs for RCRA metals).  
 NR 746 Table 1 = Wisconsin Administrative Code, Chapter NR 746, Table 1 soil screening level: Indicators of Residual Petroleum Products in Soil Pores.  
 NR 746 Table 2 = Wisconsin Administrative Code, Chapter NR 746, Table 2: Protection of Human Health from Direct Contact with Contaminated Soil.

Interim RCL = More stringent generic Residual Contaminant Level for protection of groundwater (gw) or direct contact (dc) pathway for non-industrial land use from WDNR Publication RR-519-97  
 "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance" (April 1997)

\* = Calculated Site Specific RCL  
 Exceedances: **BOLD** = detected compound **BOX** = concentration exceeds standard or site specific RCL

Notes: Laboratory analyses performed by: Synergy Environmental Lab, Inc.  
 J = Analyte detected between Limit of Detection and Limit of Quantitation  
 mg/kg = milligrams per kilogram (equivalent to parts per million)  
 µg/kg = micrograms per kilogram (equivalent to parts per billion)  
 NA = Not Analyzed NS = No Standard

NR 720 RCL = Wisconsin Administrative Code, Chapter NR 720 generic Residual Contaminant Level (industrial land use RCLs for RCRA metals).  
 NR 746 Table 1 = Wisconsin Administrative Code, Chapter NR 746, Table 1 soil screening level: Indicators of Residual Petroleum Products in Soil Pores.  
 NR 746 Table 2 = Wisconsin Administrative Code, Chapter NR 746, Table 2: Protection of Human Health from Direct Contact with Contaminated Soil.  
 Interim RCL = More stringent generic Residual Contaminant Level for protection of groundwater (gw) or direct contact (dc) pathway for non-industrial land use from WDNR Publication RR-519-97 "Soil Cleanup Levels for Polycyclic Aromatic Hydrocarbons (PAHs) Interim Guidance" (April 1997)

\* = Calculated Site Specific RCLs  
 Exceedances: **BOLD** = detected compound **BOX** = concentration exceeds standard or site specific RCL

Remediation Site Hazardous Waste Determination Form

**Notice:** This voluntary form is intended as an aid for use by Generators and Responsible Parties in determining whether *contaminated soil or groundwater and wastes* encountered or generated during the remediation of contaminated sites in Wisconsin are or would be listed or characteristic hazardous wastes subject to regulation under ch. 291, Wis. Stats. and chs. NR 600 to 690, Wis. Adm. Code. There are no penalties for failure to provide information requested. Personally identifiable information collected will be used for program management. Wisconsin's Open Records law requires the Department to provide this information upon request [ss. 19.31 - 19.69, Wis. Stats.].

Listing determinations are often particularly difficult in the remedial context because the listings are generally identified by the sources of the hazardous wastes rather than the concentrations of various hazardous constituents. Therefore, analytical testing alone, without information on a waste's source, will not generally produce information that will conclusively indicate whether a given waste is a listed hazardous waste. Generators and Responsible Parties should use available site information such as material safety data sheets (MSDS's), manifests, vouchers, bills of lading, sales and inventory records, accident reports, spill reports, inspection reports, and other available information. It may also be necessary to conduct interviews of current or former personnel who would have knowledge of the processes and hazardous materials used including waste handling or past spills in an effort to ascertain the sources of wastes or contaminants.

Where a person makes a good faith effort to determine if a material is a listed hazardous waste but cannot make such a determination because documentation regarding a source of contamination, contaminant, or waste is unavailable or inconclusive, EPA has stated that one may assume the source, contaminant or waste is not listed hazardous waste and, therefore, provided the material in question does not exhibit a characteristic of hazardous waste, RCRA requirements do not apply.

Hazardous Waste Determination Information Reviewed (continued)

Other information considered (provide description)

Yes  No  None Found  None Available

The property has been operated as a dry cleaner since 1974. According to the property owner, Mr. Harold Shipshock, the facility historically used tetrachloroethene (PCE) as a dry cleaning solvent.

See attached Contained-Out Determination letter for recent soil and groundwater quality results and how they relate to contained-out values.

Certification

I certify that the information documented above in the "Information reviewed to make a hazardous waste determination" section was developed and used as part of a good faith effort to make a hazardous waste determination. Reasonable diligence was used in collecting the information, evaluating the information, and using the compiled information. I certify that this document is true and correct to the best of my knowledge, and that I have authority to make this certification.
