

October 15, 2018

Mr. John Hnat WDNR 2300 N Dr. Martin Luther King Jr Drive Milwaukee, WI 53212

RE: Additional Investigation and Remedial Actions, Master Cleaners Remediation, 6326 Bluemound Road, Wauwatosa, WI 53212, BRRTS # 02-41-545142

Dear Mr. Hnat:

As requested, this report summarizes the scope of work and DERF budget needed to take this project to case closure.

The site conditions have been summarized in previous correspondence, including the April 4, 2018 Remedial Action Documentation Report and Proposal Additional Remediation Activities report prepared by Fehr Graham, and the subsequent email discussions and correspondence related to the proposed scope of work.

Based on these discussions the following DEF-eligible tasks, actions, and costs are proposed:

- Task 0 / Task 100: Project Management
- Task 105: Well Installation and Groundwater Sampling to Delineate Extent
- Task 103: Addition of EZVI and DHC Bacteria with RA Documentation Report
- Task 6 / 106: Groundwater Monitoring
- Task 7 / 107: Groundwater Monitoring Status Reports
- Task 8 / 108: Closure Request
- Task 9 / 109: Well Abandonment

Details that have previously been described and discussed with the WDNR over the past six months are briefly summarized on a task by task basis below, and costs are shown relative to historic approved task costs on Table A and Change Order # 5. As requested, a copy of the current DERF Linking Spreadsheet for the entire project is also attached.

Details follow on a Task by Task basis:

DERF Scope of Work

Task 100: Project Management

The project has exceeded the budgeted initial three-year scope of work and management timeline. Additional time is needed to continue correspondence, off-site property owner sharing of information, access to the City of Wauwatosa Right of Way for well installations

Nctober 15, 2018
Master Drycleaning, Wauwatosa, WI
Page 2

and permits / permission, updates, bidding, and overall management of the project scope and budget. Access for installation of the requested additional well (MW-17) on private property at 532 N 64th Street needs to be obtained.

<u>Task 105: Well Installation and Groundwater Sampling of all Site Monitoring Wells to Delineate Extent of Contamination</u>

Additional soil and groundwater investigation north, northwest, and east of SMW-14 is proposed. Three 2.5-inch outside diameter macrocore geoprobe borings will be advanced at locations approximately 130 feet north and northwest of well SMW-14, and one boring will be advanced approximately 40 feet east of SMW-14. Existing monitoring well SMW-13 already defines the extent of impacts straight north of well SMW-11.

Two of the proposed wells (MW-15 and MW-16) will be installed within the east side 64th Street right of way approximately 130 feet north of well SMW-14 and in the west side right of way of 64th Street. Both will be advanced in the grass buffer just east and west of 64th Street, and permission will be obtained from the City of Wauwatosa. Proposed well MW-17 will be advanced south of the house near the driveway of 532 E. 64th Street. Permission for drilling this well will need to be obtained from the property owner.

At each drilling location, a boring will be advanced to a depth of 20 feet, geologically logged, and a small diameter monitoring well will be installed with a ten-foot screened interval and filter pack sand / bentonite surface seal. The wells will be completed flush with the ground surface and protected using a 4-inch diameter traffic weight cover. Two soil samples per boring will be retained for laboratory analysis of VOCs (six total).

The wells will be added to the monitoring well network for the site and will be surveyed and developed. On May 28, 2018, the WDNR provided a variance from the NR141 well construction code that is necessary for use of these small diameter wells.

All existing monitoring wells and the three newly installed monitoring wells will be sampled shortly after new development is complete to help evaluate the current groundwater chemistry and the extent of contamination. Twenty-four samples (two duplicates) will be obtained for analysis of VOCs.

Task 103: Injection Beneath the Building and Within the Plume

After receipt of the latest groundwater chemistry results, the information will be summarized and the need for additional injection activities will be discussed with the WDNR. We anticipate additional injection will be necessary to achieve case closure.

Injection of additional EZVI and bacteria will be completed using geoprobe borings in select areas of the property, including beneath the building. Proposed injection borings (IP-1 through IP-10) are shown on Figure 101 (attached). The WDNR will be contacted to discuss the need and benefits of injection at proposed locations IP-7 and IP-8, and injection at those locations may not be performed. Regardless, the same amount of chemical product will be injected to treat residual contamination, but additional borings may be located elsewhere on the Master Cleaners Property if IP-7 and IP-8 are not desired for injection. Three days is anticipated for injection activities.

October 15, 2018 Master Drycleaning, Wauwatosa, WI Page 3

Although the most contaminated soil has been removed from beneath the building, residual contamination remains present, and with the building vacant, there is an opportunity to treat this area at IP-1 and IP-2 prior to repurposing the building. EZVI has been shown to successfully eliminate PCE, and the addition of living bacteria, including Dehalococcoides, should be added to the groundwater to consume degradation products that have been increasing as the PCE degrades, namely DCE, VC, and 1-1-DCE.

Injection of an estimated 700 gallons of liquid EZVI containing 5 percent iron (less than 5 microns in size) is proposed. EZVI-CH4 provides both iron and a slow release, long term organic source (food grade soybean oil) with a proprietary formulation developed by NASA to limit methane generation. Injection will take place at an estimated ten injection points using a Geoprobe with interior access capabilities so at least two of the borings can be placed inside the building. Targeted injection depths will be from ten to 16 feet below grade (saturated soil and top of bedrock).

The existing injection permit obtained on November 18, 2015 is valid for five years, and the previous permit included injection of ZVI, so no new permit is needed. The same permit conditions apply to the proposed additional injection, with pre-and post-injection monitoring of select monitoring well headspaces and the neighboring property basement ambient vapors using a PID, four gas meter and water level monitoring. Approximately eight liters of RTB-1 bacteria will also be injected using a nitrogen purge method to maintain anaerobic conditions for the bacteria.

Task 106: Groundwater Monitoring

Following injection, two more rounds of groundwater sampling are expected to be necessary, one a minimum of four months after the proposed injection, and the second approximately eight months after injection. Sampling will be completed from all 22 existing and proposed wells, and will include testing for field parameters, water level elevations, and laboratory analysis of VOCs.

Task 107: Groundwater Monitoring Status Reports

Upon receipt of each round of the laboratory analyses, the data will be tabulated and plotted. After the additional soil borings and injection is complete, a summary report, including the results of the soil and groundwater chemistry testing from the new locations, will be sent to the DNR.

As has been performed, after each sample event, information will be sent to the private well owners that have monitoring wells on their property.

After each full round of groundwater sampling, the data will be processed, and a summary sent to the DNR via email. Assuming the results appear suitable, a request for case closure will be recommended after the second round of additional sampling, eight months following the proposed injection.

October 15, 2018 Master Drycleaning, Wauwatosa, WI Page 4

Task 108: Closure Request

Under this task, additional funding is requested to complete the closure submittal per the current WDNR requirements. Requirements have grown more stringent since the work was originally laid out and proposed, and considerably more time is needed to finalize a closure request than has been currently budgeted.

Task 109: Well Abandonment

With the installation of additional monitoring wells, there will be more cost associated with well abandonment upon closure of the project.

VPLE Scope

Application and entry into the Voluntary Party Liability Exemption (VPLE) program is expected shortly. There are tasks for this project related to inclusion in the VPLE program that will be completed. These tasks and costs have been provided previously and do not need DNR approval. The tasks include:

- Phase I Investigation Report
- VPLE Application Summary
- Closure Process and VPLE Insurance Premium
- WDNR Review Fees

Schedule

Assuming approval can be provided in October 2018, the project schedule is broken out as follows:

October 2018	Approval
November 2018	VPLE Application, Drilling / Sampling Three Additional Wells
December 2018	Data Transmittal to DNR, Acceptance to VPLE Program
January 2019	Line up Injection
February 2019	Injection
June 2019	Groundwater Sampling All Wells, 4 months after Injection
July 2019	Data Evaluation, Reporting
Oct 2019	Groundwater Sampling All Wells, 8 months after Injection
Nov 2019	Data Evaluation, Report, Closure Potential
Jan 2020	DNR additional Closure Needs, if any
March 2020	Closure Request Submittal
June 2020	WDNR Closure Provided
July 2020	Well Abandonment, VPLE Insurance Requested
Aug 2020	WDNR Issues VPLE Certificate of Closure

October 15, 2018 Master Drycleaning, Wauwatosa, WI Page 5

I trust this information meets your needs and look forward to approval of the attached cost estimate and budget request.

Sincerely,

Kendrick Ebbott, P.G.

Branch Manager
