**RE: Excavation Summary
Da Swamp Bar
W2490 Hofa Park Road
Seymour, Wisconsin
Endeavor Project No. P101399.40**

**BRRTS No. 03-59-547440
PECFA No. 54165-9503-90-A**

Dear Tom:

The following information summarizes the activities and details surrounding the remedial excavation completed at the above referenced site. Figure 1 illustrates the site location.

Endeavor Environmental Services, Inc (Endeavor) submitted a source excavation Variance for removal of an estimated 550 tons of petroleum impacted soils dated December 31, 2015. On January 22, 2016, Wisconsin Department of Natural Resources (WDNR) issued a Bid Deferral approval for completion of the source excavation.

Upon removal of the local road limits, source excavation activities commenced on May 16, 2016. Endeavor supervised the excavation and transport services provided by BEST Enterprises, LLC of De Pere, Wisconsin. Excavation activities commenced near the southeast corner of the bar building and proceed south toward the right-of-way of Hofa Park Road. Activities included the abandonment and removal of the monitoring well MW-5 location (source area). As excavation activities encountered the road right-of-way, removal activities proceed west toward the former UST basin located near the southwest corner of the bar building. As excavation activities progressed, soil samples were periodically field screened using a photoionization detector (PID) calibrated to a 100-ppm isobutylene standard. Elevated readings were observed south of the southwest corner of the bar building near a utility pole providing electrical service to the site. This was an impediment to completing source removal activities. Therefore, Endeavor submitted a variance request via e-mail to the WDNR to allow for termination of electrical service and removal of the power pole to provide access to the contaminated soils.

On May 17, 2016, Endeavor received e-mail approval of the costs to removal the power pole. WE Energies was contact and the power pole was temporarily removed. Excavation activities continued to the western extent and north to the southwest corner of the bar building. As excavation activities progressed, Endeavor personnel collected and preserved confirmation soil samples from the excavation extent. Confirmation soil samples were submitted to Pace

Note: Not all sites are mapped.

Analytical of Green Bay, Wisconsin, for laboratory analysis of petroleum volatile organic compounds (PVOCs) plus naphthalene analysis. Upon Endeavor's direction, the excavation area was backfilled and the power pole was reinstalled to allow for return of electrical service by the end of the business day. Figure 2 illustrates the extent of excavation activities and the confirmation soil sampling configuration. Excavation activities resulted in the removal of 537.83 tons of petroleum-impacted soils for proper disposal at Advanced Disposal Hickory Meadows Landfill in Hilbert, Wisconsin. A copy of the waste disposal manifests can be found in Appendix A.

Confirmation Soil Sample Analytical Results

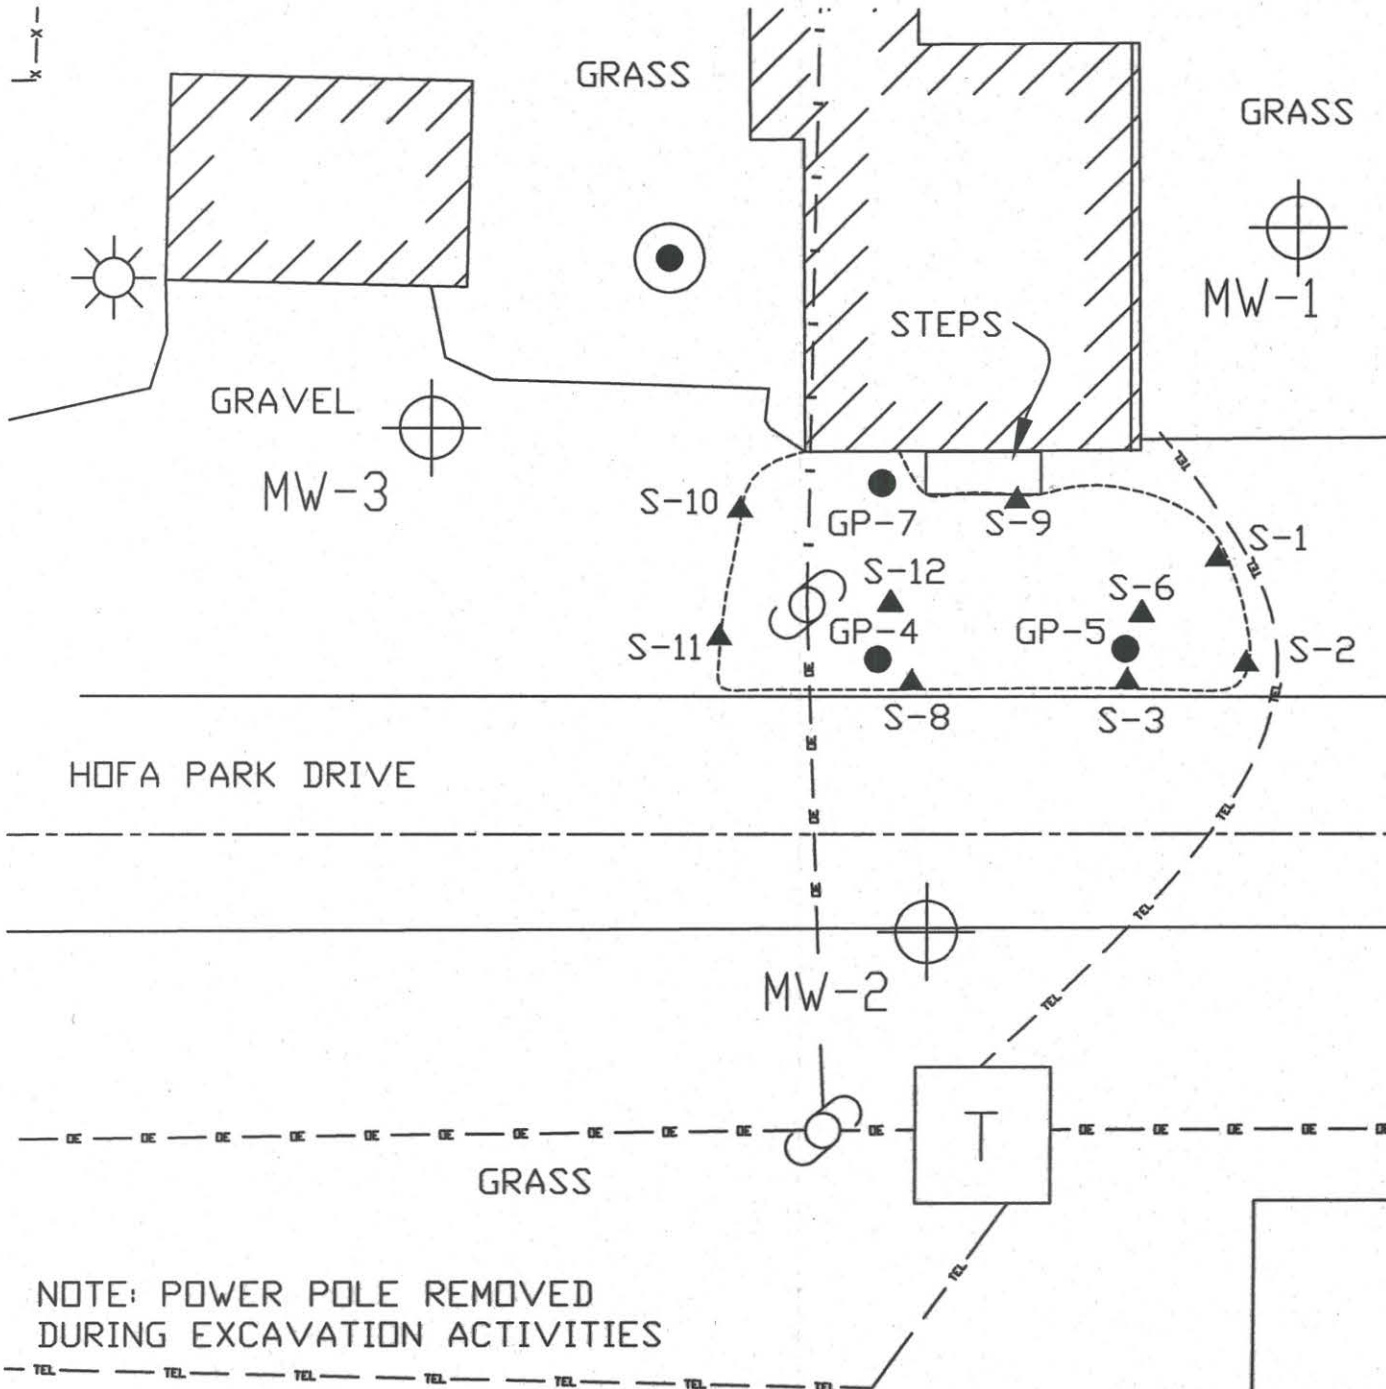

A total of nine confirmation soil samples were submitted to Pace for laboratory analysis of PVOCs plus naphthalene. Soil sample S-1 reported detections of benzene (26.7 ppb), ethylbenzene (137 ppb), toluene (121 ppb), total xylenes (710 ppb), 1,2,4-trimethylbenzene (TMB) (710 ppb), 1,3,5-TMB (282 ppb) and naphthalene (186 ppb). Soil sample S-2 reported detections of benzene (104 ppb), ethylbenzene (390 ppb), toluene (880 ppb), total xylenes (1,950 ppb), 1,2,4-TMB (1,120 ppb), 1,3,5-TMB (350 ppb) and naphthalene (700 ppb). Soil sample S-3 reported detections of benzene (1,950 ppb), ethylbenzene (4,800 ppb), toluene (13,200 ppb), total xylenes (22,500 ppb), 1,2,4-TMB (13,000 ppb), 1,3,5-TMB (4,800 ppb) and naphthalene (8,100 ppb). Soil sample S-6 reported detections of benzene (5,600 ppb), ethylbenzene (24,800 ppb), toluene (34,000 ppb), total xylenes (124,000 ppb), 1,2,4-TMB (75,000 ppb), 1,3,5-TMB (28,100 ppb) and naphthalene (24,400 ppb). Soil sample S-8 reported detections of benzene (890 ppb), ethylbenzene (4,200 ppb), toluene (4,500 ppb), total xylenes (19,300 ppb), 1,2,4-TMB (16,600 ppb), 1,3,5-TMB (5,900 ppb) and naphthalene (7,600 ppb). Soil sample S-9 reported detections of benzene (38 ppb), ethylbenzene (74 ppb), toluene (73 ppb), total xylenes (212 ppb), 1,2,4-TMB (1,860 ppb), 1,3,5-TMB (640 ppb) and naphthalene (650 ppb). Soil sample S-11 reported detections of ethylbenzene (72 ppb), toluene (49 ppb), total xylenes (567 ppb), 1,2,4-TMB (830 ppb), 1,3,5-TMB (285 ppb) and naphthalene (289 ppb). Soil sample laboratory analytical results are summarized in Table A.1. Confirmation soil sample laboratory analytical report and chain-of-custody can be found in Appendix B.

Conclusions

Excavation activities were effective in removing the majority of the accessible petroleum impacted soils. Removal of the power pole allowed for effective removal of the contaminant mass in the western extent of the excavation area nearest the site potable well. Excavation activities proceeded to the southern extent of the subject property up to the right-of-way for Hofa Park Road. Petroleum soil contamination remains off-site within the asphalt paved right-of-way for Hofa Park Road. On February 21-22, 2018, the source area monitoring well MW-5, removed during the aforementioned excavation activities, was replaced with monitoring well MW-5R.

CONDITIONS

The opinions rendered in this correspondence are based upon the information collected during the above outlined activities and represents Endeavor's professional judgment regarding the status of the above-referenced site and, as such, are not a guarantee.

Endeavor's professional judgment is based upon generally accepted environmental practices and procedures designed to assess environmental liability with respect to current and customary standards of due care in the consulting industry at this time.

The services provided by Endeavor personnel during this project have been conducted in a manner consistent with the degree, care, and technical skill exercised by environmental consulting professionals currently practiced in this area under similar budget and time constraints. Beyond this, no warranty is implied or expressed. This letter does not constitute legal advice, nor does Endeavor purport to provide legal advice.

If you have any questions regarding this excavation summary, please feel free to contact me at (920) 437-2997 at your convenience.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Ramcheck", is written over a horizontal line.

Joseph M. Ramcheck, P.H.
Senior Hydrologist/Senior Project Manager

I, Joseph M. Ramcheck, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, or licensed in accordance with the requirements of ch. GHSS 3, Wis. Adm. Code, and that, to the best of my knowledge, all the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR700 to 726, Wis. Adm. Code.

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

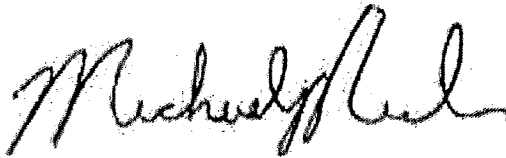

LOQ Limit of Quantitation

Code *Comment*

- 1 Laboratory QC within limits.
- 2 Relative percent difference failed for laboratory spiked samples.
- 70 RPD failed due to instrument carryover. Sample results unaffected.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.
