Re: Additional Investigation Activities
Express Cleaners, 3941 North Main Street, Racine, Wisconsin
BRRTS #02-52-547631
Bonestroo File No.: 003592-09001-0

Dear Ms. Ryan:

Bonestroo (Bonestroo) prepared this letter to document the results of additional investigation activities completed at 3941 North Main Street, Racine, Wisconsin (the Site). During June 2009, the Wisconsin Department of Natural Resources (WDNR) requested additional work in response to a June 9, 2009 report. Specifically, the WDNR requested the collection of soil samples south of B13/MW8, installation two additional groundwater monitoring wells to determine the extent of soil and groundwater contamination, and collection of groundwater samples from the entire monitoring well network. During December 2010, Bonestroo submitted a revised workplan and cost estimate to complete the additional investigation and groundwater monitoring. During February 2011, the WDNR approved the scope of work and cost estimate.

INVESTIGATION METHODS

On April 1, 2011, Bonestroo oversaw the completion of three soil boreholes (MW14, MW15, and B34) at the Site by Anhalt Well Drilling and Pumps, Incorporated (Anhalt) using hollow-stem auger drilling and split-spoon sampling techniques. The borehole/monitoring well locations are shown in Figure 1.

Bonestroo personnel described each soil sample in the field. Field soil borehole logs were prepared and included information on soil type, structural characteristics, color, moisture content, consistency, odor, and photoionizable constituents. Copies of these logs are included in Attachment A. All down-hole drilling and sampling equipment was cleaned before on-site use and between each borehole.

A Bonestroo geologist prepared borehole logs; and collected samples for laboratory analysis. In addition, soil samples from each borehole were field screened for volatile organic compounds (VOCs) using a photoionization detector (PID). These samples were placed in a 1-quart plastic bag and sealed. Care was taken to maintain a relatively constant soil volume to headspace volume ratio for all samples. The sealed headspace sample was agitated to break up soil clods before being left in a warm environment for at least 15 minutes to allow volatilization to occur. The PID probe was then carefully inserted into the plastic bag and the highest stable response was recorded. The PID used was a Thermo Environmental Instruments Model 580A Organic Vapor Meter equipped with a 10.6 eV lamp. Since no elevated PID readings were observed and

as requested by the WDNR, soil samples collected from the 2 to 4 foot interval and the 6 to 8 foot interval of each borehole were laboratory analyzed by Synergy Environmental Lab, LLC for VOCs using Environmental Protection Agency (EPA) Method 8260B.

After soil sample collection, 2-inch diameter polyvinyl chloride (PVC) groundwater monitoring wells were constructed in the MW14 and MW15. The monitoring wells were completed to 14 feet below grade (fbg) with 10 feet of 0.01 mill-slot screened interval. On the same day as installation, the monitoring wells were surveyed and developed in accordance with WDNR guidance. Monitoring well construction and development forms are included in Attachment A.

April 7, 2011, Bonestroo collected groundwater samples from monitoring wells MW1 through MW15 and piezometer PZ1. Before sampling, Bonestroo measured groundwater elevations in the monitoring wells and the piezometer to evaluate groundwater flow. Groundwater elevation data is presented in Table 1. The groundwater samples were laboratory analyzed for VOCs using EPA Method 8260B.

FINDINGS

Sediments encountered in the boreholes were consistent with previous boreholes and contained approximately 1 foot of topsoil underlain by fine silty sand to depths between 5 and 8 fbg. Underlying the silty sand was silty clay till. No solvent odors or elevated PID responses were observed in the collected soil samples. VOCs were not detected in the laboratory-analyzed soil samples collected from the boreholes. Soil sample field screening and laboratory analytical results are presented in Table 2. The approximate extent of VOC-contaminated unsaturated soil is shown in Figure 1.

Groundwater was encountered at approximately 3 to 6 fbg. Groundwater flows generally to the west-southwest across the Site and to the east across the adjacent S.C. Johnson property. The groundwater elevation on April 7, 2011 is depicted in Figure 2. Groundwater collected from the newly installed monitoring wells (MW14 and MW15) did not contain VOC concentrations above laboratory analytical detection limits. VOC concentrations in the remainder of the monitoring wells were generally consistent with past results. The extent of groundwater containing PCE concentrations above the NR 140, Wisconsin Administrative Code ES is shown in Figure 3. Groundwater quality analytical results are presented in Table 3. Laboratory reports and chain-of-custody records are provided in Attachment B.

CONCLUSIONS AND RECOMMENDATIONS

Based on the additional investigation results, the extent of soil and groundwater contamination has been defined. Bonestroo recommends that an evaluation of remedial action options be completed and a remedial action plan be developed to address soil and groundwater contamination at the Express Cleaners site.

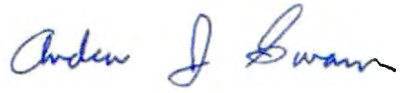
DISCLAIMER

Bonestroo completed this work in general conformance with federal, state, and local requirements and made all appropriate inquiry consistent with good commercial or customary practice. The results provided in the report are based upon professional interpretation of the information available to Bonestroo given the time and budget constraints of this project. Bonestroo has assumed the information provided by the client and property owner and included in the report is factual, complete, and correct. Bonestroo does not warrant that this report represents an exhaustive study of all possible environmental concerns associated with the Site. However, the items included in this report are believed to adequately address soil and groundwater quality at the Site.

We trust this information meets your needs. Please contact us at (262) 241-3133 if you have any questions or concerns.

Sincerely,

BONESTROO



Andrew J. Swaim

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
2	Relative percent difference failed for laboratory spiked samples.
4	The continuing calibration standard not within established limits.
8	Closing calibration standard not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature Michael J. Ricker

"J" Flag: Analyte detected between LOD and LOQ LOD Limit of Detection LOQ Limit of Quantitation

Code	*Comment*
1	Laboratory QC within limits.
2	Relative percent difference failed for laboratory spiked samples.
4	The continuing calibration standard not within established limits.
8	Closing calibration standard not within established limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature Michael J. Ricker
