Re: **Groundwater Monitoring Status Report**
Koeller Center, 1020 – 1142 South Koeller Street
Oshkosh, Wisconsin
BRRTS: 02-71-547941

Dear Mr. McKnight:

On behalf of Koeller One, LLC, Gannett Fleming, Inc. (GF) is submitting this groundwater monitoring status report for the former dry cleaner facility located at 1142 South Koeller Street in the Koeller Center shopping mall site in Oshkosh. Figure 1 is a site location map, and Figure 2 is an aerial photo that shows the area of investigation.

On April 17, 2017, GF submitted a *Closure Request* that summarized site investigation and groundwater monitoring results through November 2016. On June 20, 2017, the WDNR sent a letter to the Livesey Company, the owner of the Koeller Center, denying site closure. In its June 2017 letter, the WDNR indicated that additional groundwater monitoring of MW-1 through MW-4 and MW-6 was necessary to establish whether the tetrachloroethylene (PCE) plume was stable or receding. The WDNR's June 2017 letter also indicated that Koeller should evaluate whether additional investigation or remedial actions are necessary to obtain closure.

Since the WDNR's June 2017 letter, six rounds of groundwater samples have been collected. Sample collection dates are shown on the table below with an "x" indicating that the well was sampled on that date.

GF's latest status report was submitted to the WDNR on August 20, 2018, and included the analytical results of groundwater samples collected in January and August 2018. GF's August 2018 report also included an evaluation of the need for additional investigation or remediation discussed in the WDNR's June 2017 letter to Livesey. A summary of groundwater monitoring activities conducted in the months of March, September, and December 2019 are included in this report.

Periodic reporting of site remediation progress to the WDNR is required pursuant to ss. NR 700.11(1) and 724.13(3), Wisconsin Administrative Code. A completed certification page for the report is included with this report.

Recent Scope of Work (March, September, and December 2019)

GF conducted groundwater monitoring activities on March 12, September 18, and December 13, 2019 that included:

- Measuring groundwater elevations in all site wells – MW-1 through MW-7.
- Measuring remediation by natural attenuation (RNA) parameters in MW-1 through MW-4 and MW-6 in March through December; RNA parameters were also measured in MW-5 and MW-7 in September and December. In March, RNA parameters (dissolved oxygen [DO], oxidation-reduction potential [ORP], temperature, pH, and conductivity) were measured with a YSI 550 multi-meter in-situ in each of the wells prior to collecting groundwater samples (i.e., static conditions prior to purging), and then again after the well had been purged and sampled. In September and December, RNA parameters were measured with a Hanna Multi-Parameter Meter after purging each well of four well volumes, immediately before collecting the samples.
- Collecting groundwater samples from monitoring wells MW-1, MW-2, MW-3, MW-4, and MW-6 for analyses of volatile organic compounds (VOCs) in March through December.

Mr. Kevin McKnight
Wisconsin Department of Natural Resources
January 30, 2020

-3-

Samples from MW-5 and MW-7 were also collected in September and December. Duplicate samples were collected from MW-1 in March 2019, from MW-7 in September, and from MW-3 in December.

Groundwater samples collected from each well were placed into laboratory-supplied containers with hydrochloric acid preservative. The groundwater samples were placed in a cooler with ice and shipped via overnight courier to Pace Analytical Laboratory of Green Bay, Wisconsin, for analysis of VOCs using EPA Method 8026B. The laboratory reports for groundwater samples collected in March, September, and December 2019 are included with this report as Attachment A.

Field Measurements and Analytical Results

Table 1 presents depth to water (DTW) measurements and calculated groundwater elevation data in the site wells through December 2019 and includes all previous measurements. Figure 3 shows the groundwater flow direction based on elevations measured in MW-1 through MW-7 on December 13, 2019. As shown on Figure 3, the groundwater flow direction in December 2019 was to the north-northeast between MW-7 and MW-2, then to the northeast further downgradient. The groundwater flow directions measured in 2019 were consistent with directions measured since MW-5 through MW-7 were installed in March 2016.

Table 2 summarizes the analytical results of groundwater samples collected through December 2019, including the analytical results of samples previously collected from the monitoring wells.

- Duplicate results are averaged in Table 2 for statistical analysis/plotting, per December 2013 Interstate Technology & Regulatory Council guidance.
- PCE was the only compound measured in March through December 2019 at concentrations above its NR 140 Enforcement Standard (ES) and Preventative Action Limit (PAL) of 5.0 and 0.5 micrograms per liter ($\mu\text{g}/\ell$), respectively. Notable concentrations of PCE measured in MW-1, MW-2 and MW-3 during the months of March through December 2019 are discussed below.

Table 3 presents the results of the RNA parameters measured through December 2019 and includes all previous measurements collected from the site wells. The pH of the groundwater measured in source well MW-1 and downgradient well MW-3 has ranged from 6.7 to 7.9 since RNA parameters were first measured in June 2013. DO concentrations in those wells have ranged from 0.17 to 3.82 milligrams per liter (mg/ℓ) since June 2013. The relatively low DO concentrations and neutral pH values indicate that the aquifer would be conducive to reductive dechlorination

if amendments were made to increase the activity of the microbes that facilitate the breakdown of chlorinated ethenes.

Discussion

Historically, PCE has only been measured in two wells (MW-1 and MW-3) at concentrations above its NR 140 ES of 5.0 µg/l. In December 2019, a PCE concentration of 5.1 µg/l was measured in MW-2, which is the highest concentration of PCE measured in this well since 2008.

Since reaching its maximum concentration of 275 µg/l (the average of 255 and 295 µg/l measured in the two, duplicate samples) in July 2017, PCE concentrations in MW-1 have fluctuated slightly with an overall decreasing trend. The most recent sample collected from MW-1 in December 2019 contained 184 µg/l of PCE. PCE concentrations measured in MW-3 were the highest in September 2019 (81.4 µg/l) but then decreased to 45.2 µg/l (the average of 39.3 and 51 µg/l measured in the two, duplicate samples) in December 2019. Water levels rose about 3.4 to 4.7 feet between January 2018, when the groundwater elevation was at a relative minimum, and December 2019, when it was measured near historical maximum elevations. A chart showing the groundwater elevations and PCE concentrations measured in MW-1 since 2006 is included with this report as Attachment B. Figure 4 shows the estimated extent of PCE in the groundwater at concentrations at or above its NR 140 ES/PAL of 5/0.5 µg/l on December 13, 2019.

GF believes the increase in PCE concentrations measured in the groundwater samples collected from MW-1 and other wells in September and December 2019 is due to the high water table coming into contact with PCE-impacted soil. However, we believe the overall increase in dissolved-phase PCE concentrations is limited and indicates that the residual mass of PCE in the soil is relatively small. Additionally, the hydraulic conductivity of the aquifer is relatively low (2.8×10^{-5} cm/sec) and inhibits the migration of the PCE in the groundwater, as evidenced by the relatively limited extent of PCE at concentrations above the NR 140 ES in the groundwater (about 70 feet) since the dry-cleaning facility associated with this property closed in 1994. There are no potable or municipal wells within 1,200 feet of the site, and the downgradient edge of the PCE plume is over 150 feet from the property line. Based on PCE concentrations measured in the soil and groundwater, GF does not believe there is enough mass of PCE in the source area to cause it to migrate offsite without being diluted to concentrations below the NR 140 PALs.

Because of the low groundwater velocity and the relatively wide fluctuations in the water table elevation over the past 10 years, GF proposes to monitor PCE concentrations in the groundwater on an annual basis going forward. Groundwater monitoring activities will continue until stable/receding trends in PCE concentrations have been established. GF and Livesey are also evaluating alternatives to reduce PCE concentrations in the soil and groundwater and will notify

TABLE 1

WATER LEVEL ELEVATION DATA (MW-1 THROUGH MW-7)

NOTES:

Site datum = feet above mean sea level (ft MSL).

USGS Registered Benchmark = 776.04 ft MSL, top of nut of fire hydrant in front of Mitchell Insurance at 1746 W. 9th Ave. (Source City of Oshkosh Engineering Department, 920-236-5065.)

Local Benchmark = 776.11 ft MSL, top of nut of fire hydrant, 240 feet east of MW-1.

NI = Not installed.

NM = Not measured.

FOOTNOTES:

(1) Top of casing elevations for MW-1 through MW-4 based on 03/14/14 survey using MW-1= 774.19 ft MSL as benchmark.

(2) MW-5 through MW-7 surveyed on 3/28/16 using MW-1 top of casing as benchmark. The top nut of the local benchmark fire hydrant was measured at 776.10 ft MSL on 3/28/16 and 4/12/16.

(3) The relatively deep groundwater elevation measured in MW-1 on 06/14/13 was likely due to field error caused by not allowing the water table to rise and stabilize after removing the air-tight cap. This phenomenon was discussed in more detail in Gannett Fleming's November 2013 *Site Investigation Report*.

(4) On 03/12/19, the MW-3 top of casing was bent so that a water level probe could not reach past 8 inches below top of casing.

(5) On 09/18/19, the MW-3 top of casing was filled with sand and debris so DTW was not measured.

(6) The top of casing is damaged and therefore an accurate DTW could not be measured.

TABLE 2
SUMMARY OF GROUNDWATER MONITORING ANALYTICAL RESULTS

NOTES:

Concentrations are in micrograms per liter ($\mu\text{g}/\ell$).

Detected concentrations at or above an NR 140 PAL are italicized and those at or above an NR 140 ES are bold.

Duplicate (Dup) results are averaged for statistical analysis/plotting, per December 2013 ITRC guidance.

All samples except those collected on 09/06/06 were analyzed for a full suite of VOCs using EPA Method 8021 or EPA 8260B. Only compounds detected in one or more samples are shown on this table.

J = Estimated concentration below laboratory quantitation level.

NA = Not analyzed.

NR 140 ES = Wisconsin Administrative Code NR 140 Enforcement Standard.

NR 140 PAL = Wisconsin Administrative Code NR 140 Preventive Action Limit.

PCE = Tetrachloroethylene.

TCE = Trichloroethylene.

U = Compound not detected at or above the average of the limits of detection measured in the sample and its duplicate.

FOOTNOTES:

(1) The 01/28/09 trip blank contained 0.84 J $\mu\text{g}/\ell$ of chloromethane as did MW-1 (0.47 J $\mu\text{g}/\ell$) and MW-2 (1.27 $\mu\text{g}/\ell$).

(2) Methylene chloride was detected at concentrations above its method detection limit but below its quantitation limit in the samples collected on 08/01/18 from MW-2 (at 1.0 $\mu\text{g}/\ell$), MW-4 (0.75 $\mu\text{g}/\ell$), and the two samples collected from MW-6 (1.4 and 0.72 $\mu\text{g}/\ell$).

NOTES:

RNA = Remediation through natural attenuation.

Conductivity in millisiemens per centimeter (mS/cm).

Dissolved oxygen (DO) concentration in milligrams per liter (mg/l).

Oxidation reduction potential (ORP) in millivolts (mV).

Temperature in degrees Celsius (°C).

Water quality parameter data collected using a YSI 556 multi-parameter meter prior to 09/18/19, and a Hanna HI98194 on 09/18/19 and thereafter.

FOOTNOTES:

(1) RNA parameters collected in-situ after purging and sampling.

(2) RNA parameters collected after purging and prior to sampling.

(3) RNA parameters collected after purging and sampling.

RE: Project: 47358.003 KOELLER ONE
Pace Project No.: 40184122

Dear Tony Miller:

Enclosed are the analytical results for sample(s) received by the laboratory on March 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 47358.003 KOELLER ONE
Pace Project No.: 40184122

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: 47358.003 KOELLER ONE
Pace Project No.: 40195482

Dear Tony Miller:

Enclosed are the analytical results for sample(s) received by the laboratory on September 19, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

QUALIFIERS

Project: 47358.003 KOELLER ONE
Pace Project No.: 40195482

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

RE: Project: 47358.003 KOELLER ONE
Pace Project No.: 40200832

Dear Tony Miller:

Enclosed are the analytical results for sample(s) received by the laboratory on December 14, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

Pace Project No.: 40200832

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
